A new amateur has asked me about packet radio bbs's and I have no idea how to respond. He is interested in knowing about the bbs system and I'm thinking he is about 10 years too late. He is located in North Texas in the DFW area. Anyone know of any bbs systems available in that region?

AMERICA IN DANGER of its own out-of-control Bio-Terror:
Is 1984 here? Or cripping... God help us, blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in U=2ES.A.

Our government needs TORTURE in U.S.? See details below...
It has your VOTE, support? Abused...

CRITICS (political/social/cultural) are harassed and secretly persecuted
along with their KIDS in schools/colleges, especially, during tests/exams
(Think: Guantanamo "stress-positions" in the context of 1984-technologies)

Bio-Aerosols and aerosolized chemicals are used to cause:

- severe colds/coughs turning into bronchitis, eye irritation
- bacterial pneumonia/other pneumonia, shortness of breath
- surges of severe headaches, migraines, dizziness, etc.
- fainting collapses by symptoms-mimicking aerosols
- severe stomach pains (sharp, burning, nausea, etc)
- chest-wall pains, heart-muscle inflammations/trauma, etc.

WORSE:

- heart attacks under cover of second-hand smocking
- car crashes/accidents by Vertigo-causing aerosols
- liver/organ failure by small-dose toxins (trace-less?)
- cancer-causing/facilitating - months-long assasinations

This "Yushchenko syndrom" CAN destabilize NATIONs
Waste, Fraud, Cronism and Abuse in HomeSec/FBI
Fabrication of Believable Info/Manufacturing of accidents

U=2ES. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!
Symptoms-mimicking aerosols do HARM, weak or ill people.

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and Post*
Manufacturing of FEAR to grab more Power and Money, of course.

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:
--=

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA) and other places. Highly volatile aerosols with and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=3Dkrd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As a former NASA Langley scientist working in the area of nanotechnology and nanoscale particles, I have been recently exposed to the establishment of secret gas-aerosol rooms inside of United States, at least in the Mid-Atlantic region (from Philadelphia to Virginia). First, the highly irritant aerosols have surfaced at the NASA Langley Research Center in several safety accidents. Investigations were blocked, probably, because of lack of Congressional approval for such financially-lucrative research at NASA. Later, these aerosols had been encountered outside of NASA in Virginia, Delaware and Pennsylvania

.
This points out to yet another proliferation of originally-sensitive technologies into domestic American life to hurt and harass people without a proper oversight and much control. This amounts to torture, extra-judicial prosecution and authoritarian intimidation tactics. The use of such irritants and the operations of the secret gas-aerosol rooms are gross violations of human and constitutional rights of American citizens and various domestic and international laws.

-------------------Full text of an ad from Philadelphia's philly.com-------------------------

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA). Highly volatile aerosols with and without bacterial content cause dry cough, airways and eyes irritation, chest pain and inflammation. FBI and Homeland Security associates are likely operators of SARs, while collaborators may be hotel staff and landlords, who get financial/material or other incentives. US citizens and kids are victims.

Torture is any act by which severe pain, whether physical or psychological, is intentionally inflicted on a person as a means of intimidation, deterrence, revenge, punishment, sadism, or information gathering. At times, medicine and medical practitioners have been drawn into the ranks of torturers, either to judge what victims can endure, to apply treatments which will enhance torture, or as torturers in their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

America in danger -
The vice is NOT impeached.
America in danger -
The public trust is breached.

Big Brother spins protection
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Which side are you on, boys?
Which side moves you on?
Which side are you on, girls?
Which side did you wrong?
(Chorus after F. Reece)

Your church is burned by haters.
The priests to go to jail?
Your dreams are cheyned by traitors,
But hope still shines through veil.

Dust rooms came back to gas us
       With neo-Naz (or Con) embrace...
New immigrants do make US!
       And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture
And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

       V. Haryk-Bukovynsky   =A9 VMH

I know its not time yet, but close enough to start thinking about your plans.

The TARA Rumble is the "PREMIER" contest for PSK31. Also its time to get your teams ready for the TEAM CHALLENGE. Can you beat the WORLD TEAM this year. They have held the trophy enough, time to knock em off.

Its fun and meet lots of nice folks on the air for a fun challenge.

The Fall Classic - 7th Oct. 2006

BE THERE

and be ready to RUMBLE!!!!!!

Rumble rules can be found at

http://www.n2ty.org/seasons/tara_rumble_rules.html

DATE AND TIME

Starting time is at 00:00 UTC, and ending time is at 24:00 UTC on Sunday 19th November, 2006.

OBJECTIVE

The European PSK Club has the honour to invite the radio amateurs all over the world to participate in the EPC PSK63 QSO Party. The objective of the competition is to establish as many contacts as possible between radio amateurs around the world by using the BPSK63 mode. Everybody can work everybody for QSO and multiplier credit.

BANDS AND FREQUENCIES

Participants are allowed to work on 160 meters (1838...1840 KHz), 80 meters (3582...3584 KHz), 40 meters (7037...7039 KHz), 20 meters (14072...14074 KHz), 15 meters (21082...21084 KHz) and 10 meters (28082...28084 KHz).

TYPE OF COMPETITION

Transmitters and receivers must be located within a 500 meter diameter circle or within the property limits of the station licensee�s address, whichever is greater. All antennas used by the entrant must be physically connected by wires to the transmitters and receivers used by the entrant. Only the entrant�s call sign can be used to aid the entrant�s score. All entrants are allowed to use packet and web clusters. There are no separate entrant categories in the competition; all participants work as SOAB (Single Operator - All Bands). All stations at which one performs do all of the operating, logging, and spotting functions. Only one signal is allowed at any one time. The operator may change bands at any time. The output power shall not exceed 100 watts.

EXCHANGE

EPC members should send signal report plus EPC membership number (example � 599 EPC001). Please make sure that you don't separate �EPC� from the �Number�, and you don't use any characters between. Please make sure that your EPC number consists of 3 digits. Other stations should send signal report plus QSO number, starting 001 (example � 599 001).

POINTS

Contacts with EPC members are worth 5 points; contacts with other stations are worth 1 point. The same stations may be contacted again on other bands.

MULTIPLIER

A multiplier of one is for each different EPC number contacted on each band.

SCORING

The final score is the result of the total QSO points multiplied by the sum of EPC numbers contacted on each band.

CERTIFICATES AND PLAQUES

First, second and third place certificates will be awarded in the World and every continent. First place certificates will be awarded in every participating DXCC country. The EPC PSK63 World Plaque will be awarded for the first place in the World. All scores will be published on the EPC website. All certificates and plaques will be issued to the licensee of the station used. All certificates will be issued in a PDF format and sent via email to the winner. Winners may purchase special plaques through the EPC General Manager; plaques will be awarded in the following geographical areas: Europe, Asia, North America, South America, Africa, Oceania, United Kingdom, Scandinavia, Russia, USA, Canada and Japan. If you are interested in sponsoring a special trophy for the EPC PSK63 QSO Party, please contact us.

LOG INSTRUCTIONS

All times must be in UTC. All sent and received exchanges are to be logged. We accept logs in the Cabrillo format ONLY. Name your Cabrillo file as your callsign (for example � mm0dgr.cbr), and email it to . Be sure to put the station callsign in the �Subject� line of the message. Electronic submission implies a signed declaration that all competition rules and regulations for amateur radio in the country of operation have been observed. All entries must be emailed no later than 30 days after the competition.

DISQUALIFICATION

Violation of amateur radio regulations in the country of the participant, or the rules of the competition; unsportsmanlike conduct; taking credit for excessive unverifiable contacts or unverifiable multipliers will be deemed sufficient cause for disqualification.

Incorrectly logged calls or numbers will be counted as unverifiable contacts for culprit only. The use by an entrant of any non-amateur means such as telephones, telegrams, internet, or the use of packet to solicit contacts during the competition is unsportsmanlike and the entry is subject to disqualification. Actions and decisions of the EPC PSK63 QSO Party Manager are official and final.

I wrote some stuff on this. Search old Packet Perspectives in QST (May 1994, pg. 110.) It was mostly for DX packet clusters, but would also serve as a dumb term. There are serious problems with the keyboard and small screen with this. In the near future, I may do something similar with APRS, expecially if I can figure out how to get my hands on an HP-50G and use the serial port option!

I dont think anyone has used a packet BBS in 7 or 8 years. Maybe you should steer him into HF digital modes like PSK31 and the like, if he has the license for it.

There are a few AMPR net BBS's still online. Search google for them. I dont know any in Texas, but he can TELNET in from the internet and talk to amateurs around the world and via radio.

Just a thought!

Just one more thought.   Packet BBS is used on all Militry PBBS boards in conjunction with All MARS types.   It also has HF capability on Packet, Pactor, Ale, etc. Pactor on HF was the most used until ALE pushed it aside recently.   I still use VHF packet and Digicom software almost daily with ABM6USA here at Schofield Barracks Signal Corps Station.   AS for those weird psk31, mtty, and 3 or 4 other formats I gave them a shot and for msg tfc handling they were 90% worthless.   No ARQ builtin hence msg traffic had errors too often to even mention them.

Joe ABM6JF MBO for winlink 2.9 PBBS MARS PBBS

I agree with the keyboard and small screen. Any problem with the cable
(4 pin from Hp48 to DB9 to a DB9/DB25 to the TNC), ie. is it necessary
to build a cable or can the stock 4 pin -- DB9 with a DB9/Db25
converter work?

Thanks

Hi all

I am located in Boronia which is in the eastern suburbs of Melbourne Australia.

After a very long absence from packet radio I have reassembled my packet station and have been looking to try and connect to a local bbs.

Frequencies and stations appear to have changed substantially. When I was last on I frequently connected to vk3rmu-2 near Healesville but I can't hear this repeater any more.Vk3frs is listed as being on 144.775 but I have been unable to connect using my 1200 baud setup.

I have however been able to connect to vk3my-4 in Bayswater. Also to vk3rmd-1 on Mt Dandenong. The trouble is that these are not bbs's and I am unable to digipeat via them.

Can someone suggest a path whereby I can access directly or indirectly a bbs in Melbourne?

Please note I am not set up for tcpip.

Thanks Peter

Peter,
I just guess you moved out of range of the VHF repeaters your
trying to access.   And I guess there are no others also that
you can digipeat thru to the one your looking for.  Some people
with packet setups however dissallow digiteating via them by
setting their mode to block digipeating at all.
                    Joe/ABM6JF

I'm new to digital and currently have my computer interfaced to my satellite radio. I'm wondering if there is much digital on the regular 2m and 70cm bands? If so, where should I look?

There are certainly some experimenters around...

I'd suspect though it will be an arranged thing rather than blind CQ'ing like you hear on HF. The bandplan for digital work is also going to vary

from country to country as well. Some of the meteor scatter modes might
interest you too. (Like FSK441 etc)

Where are you?

Cheers Bob W5/VK2YQA

I'm in Olympia, WA. I originally wanted to try and work some of the digital satellites. However, I have also heard of meteor scatter and it sounds like fun. Although, I thought that that was primarily on 6m which I don't have.

I may switch and interface my HF radio to the computer. Right now, digital
is new so I'm open to about anything.

Rod

You can use the stock HP cable with a null modem (swap pins 3 and 4).
This was described in QST.  At the time, I didn't know what a null
modem was.

A cheap interface for your soundcard/rig combo and software for the
mode you want. Find one prebuilt, a kit or roll your own.

73,
Jim

As someone else said, they're pretty easy to make, but you can also get them assembled and wired for your own radio from "BuxComm," run by Buck, K4ABT. I bought one from BuxComm a few years ago and saved the bother of getting all the parts, etc. www.PacketRadio.com or www.COMMparts.com/catalog. Cheap and easy, many (?all?) of them come with software on a CD, so you can basically spend an hour hooking up and installing, and be working a digital mode the same afternoon.

I know Buck is still in business because I was using one of his interfaces between my PC and FT-840 to work PSK31 and RTTY; then I went inactive for a few years and sold the FT-840. Decided to play on HF again, dragged out the 706, and instead of buying connectors and making a cable, I just ordered a cable from BuxComm, pre-wired, to go between the sound card and 706. Didn't cost much more than the two connectors would have cost at Radio Shack.
  :-)

Good luck! The digital modes--particuarly PSK31 IMO--can be a WORLD of fun!

PCSAT-2 was supposed to have a PSK31 experiment: 10 meters (SSB XCVR) up, and 70cm or 2m down, with the audio riding on FM. In theory, at least, it could be operated full duplex from a really cheap station. I think they terminated the experiment before I had a chance to check it out.

Did anyone have any experience with this?

Apparently, the Midshipmen are planning another satellite with the same mode (plus APRS) for launch in December.

I didn't work it myself, but it worked great for a couple of days. For
some reason, the 10 meter receiver became progressively more deaf over
the space of a week.

Hello Are you interested in the New digital capable Icom IC91 AD? What about
D-Star?
If so Come join us at the New more laid back IC-91AD Yahoo group.
We are just starting out so come join us and watch us grow.
The reason for this group is simple. I have vast experience in the area of
owning and moderating newsgroup type lists. The other groups devoted to this
radio have gone nowhere. I am serious about making this THE group. we
already have files for modding the radio the manual and other files are
available for the asking.
This group will have a laid back approach.
occasional Jokes are allowed.
Anyway I will add the 91AD to the list of groups that I own and hopefully
this will become the single point of interest for this incredible digital
capable radio.

OK I can get my blaster to TX or RX but not both. If I set the VOX
high it goes to TX. If low it stays on RX. If intermediate it
oscillates. Any answers?

ARRL Bulletin 19 ARLB019
From ARRL Headquarters
Newington CT October 12, 2006
To all radio amateurs
SB QST ARL ARLB019

ARLB019 FCC releases long-awaited ''Omnibus'' Amateur Radio Report and Order Ending a protracted waiting period, the FCC's Report and Order in the so-called ''Omnibus'' Amateur Radio proceeding, WT Docket 04-140, was adopted October 4 and released October 10, 2006. In it, the FCC adopted nearly all of the proposed changes in the Notice of Proposed Rulemaking released back in 2004. The FCC has:
expanded the phone subbands in the 75 and 40 meter bands
permitted auxiliary stations to transmit on portions of the 2 meter band.
permitted the use of spread spectrum on 222-225 MHz;
permitted amateurs to retransmit communications from the International Space Station;

permitted amateur licensees to designate a specific Amateur Radio club to receive their call sign in memoriam
prohibited an applicant from filing more than one application for a specific vanity call sign;
eliminated certain restrictions on equipment manufacturers;
permitted Amateur Radio stations in Alaska and surrounding waters more flexibility in providing emergency communications;
clarified that ''amateur stations may, at all times and on all frequencies authorized to the control operator, make transmissions necessary to meet essential communication needs and to facilitate relief actions.

deleted the frequency bands and segments specified for RACES stations and deleted the requirement for public announcement of test locations and times.

In addition, the FCC took several other miscellaneous actions.
In ''refarming'' the frequencies currently authorized to Novice and Technician Plus licensees, the Commission increased the voice segments from General, Advanced and Amateur Extra licensees.

On 75 meters, Generals will be able to use voice from 3800-4000 kHz, an increase of 50 kHz. Advanced class licensees will be able to use voice from 3700-4000, an increase of 75 kHz, and Amateur Extras will be able to use voice from 3600 to 4000 kHz, a generous increase of 150 kHz.

On 40 meters, Advanced and Extra Class licensees will be able to use voice from 7125-7300 kHz, an increase of 25 kHz. General class

licensees will be able to use voice on 7175-7300 kHz, an increase of 50 khz
On 15 meters, General class operators will have phone privileges on
21275-21450 kHz, an increase of 25 kHz.

ARRL President Joel Harrison, W5ZN, expressed the ARRL's gratitude
to the FCC Commissioners in a letter dated October 11: 'On behalf of
the ARRL and the Commission's licensees in the Amateur Radio Service
I want to express appreciation for your release yesterday of the
Report and Order in WT Docket 04-140 (FCC 06-149) amending Part 97
END of the Commission's Rules. The Commission's action in clearing this
pending proceeding will assist the Amateur Radio Service in meeting
its objectives, particularly with regard to providing emergency and
public service communications.''

The changes will go into effect 30 days after the R&O is published
in the Federal Register.
(courtesy of KH6JF if anyone on this group is interested)

Joe/ABM6JF/KH6JF

Hello,

That's a really good question, but what is really a rigblasterplus compared
to the circuit shematics shown here?

http://perso.wanadoo.fr/f6crp/denis/psk31.htm

This is why I would never buy somethig I could homebrew and adapt to my needs.

73 de F8BOE Olivier ...-.-

Yes it was, your header is still the same, and you've now re-spammed every
newsgroup again with your 'apology'. It doesn't get any dumber.

> I have never been on newsgroups before and not sure how to
> work them.
Yet you know how to spam them. Did you also learn to run before you could
walk?
```

> I hope you guys can forgive a bad choice.

I have a rigblaster plus connected to an FT-100, I am not sure of the
available connections on the 897 but I used the data port on the FT 100, its
just a 6 pin mini din (looks like a PS2 connector for a mouse or a keyboard)
You can make your own cable out of an old keyboard cable just attach an RJ45
6 wire connector on the other end and you can set the jumpers inside the
rigblaster for what you need. you can also get custom cable from
westmountain radio but then you loose the use of your mic when rigblaster is
connected.
Hopefully that was helpful

So how come I'm seeing repeat posts by you today? Your 'response' smacks of
lies. You really have to work on your English. Next time, choose not to
crosspost to a dozen groups. Murphey? Really!

Fixed several issues raised by users regarding 3.0, Specifically

1. How the server filter setting is handled,
2. Server report path correction,
3. Position dialog default values,
4. Persisted settings for station and gps tracking,

Check http://www.aprspoint.com/ for details. Thanks.

Brand new to ham and, even more so, packet. APRS looks too cool. What
to buy? Which TNC would last from initial fumbling to mobile APRS. Or
is that a stupid expectation? Then just tell me about your packet/APRS
system congfig please?

Tnx and 73,
jim ad7hv

Hi Jim

I started with one of the oldish 1200/300 BPS TNCs maybe 10 years ago. This was when PC's didnt really have the grunt to do DSP on incoming sound card signals.

Nowadays I use the sound card DSP systems for any kind of digital mode. This gives you greatest flexibility to run all kinds of systems and modes from packet to PSK31. I dont however know if APRS will run on top of (say) Tom Sailor's soundmodem engine for Windows. I am pretty sure it does on Linux though.

Obviously a TNC for mobile use will have a smaller footprint in the car. I assume for APRS one changes/reprograms the EEPROM or has one with the purpose built code extensions. Or setup a portable computer as well.. (I mean you need a GPS box too)

Sorry I have not played with APRS as such.

Cheers Bob VK2YQA

Dave, try a Google search using the brand and model. I was able to get
the service manual for the old (70's) CDR TR-44 rotator that way. It's
amazing what's out there.

Jim Chandler, N5COT

Does anyone know of a site or info to build a DSP speaker similar to the
Hear It by Gap Antenna?

Tried Google but in a bazillion pages, don't see any homebrew items.
Probably a terminology error

???

Thanks

Paul P
K0PRP

Hi Paul

The idea behind DSP is actually pretty simple. Its just that there is lots of maths involved (ie repetitive). You need an A/D, a number crunching processing and a D/A.. thats it! there are even direct DSP demodulator devices available for HF receiving. Analog Devices does them (amongst others)

If you are looking for a PC based device to filter (say) for CW use you might want to look at Linrad. Its a Linux application but the web info is well worth a read. Spectrum Lab for W32 also has some DSP based filtering but I havent tried it.

There are quite a few amateur based DSP projects out there. I think the ARRL may have even supported a homebrew project for a while. If you still cant find it on a websearch get back to me and I'll have a deeper look.

Sorry I cant help more.

Cheers Bob VK2YQA

I have the SignaLink SL-1+ and it works great. I am using it with Mac OSX and a Kenwood TS-570S(G) and cocoaModem software.

The reason I selected the SL-1+ over other interface units on the market was the unique Auto-PTT. It handles the PTT for me without having to mess with a serial connection. It detects the sound card output and closes the PPT line. Tigertronics supplied a cable the plugs into the SL-1 and the ACC2 (13-Pin DINN) on the back of the Kenwood rig. Life is too short to ever solder another 13-Pin Dinn plug.

I chose the SL-1+ for the same reason. I have a homebrew interface, but it requires a com port for PTT. My Del laptop doesn't have a com port and USB adaptors don't always work.   The Tigertronics works great.

I have a new Yaesu FT-817ND that I would like to use on PSK-31.

According to the manual, one should be able to just connect the radio to the sound card without the need for any interface boxes such as the Rigblaster or Nomic.

I have done this with my old Icom IC-735 and it worked pretty well up to about 10 watts of output, so one would think I should be able to get away with it running only 5 watts or less on the FT-817.

My question is, have any of you all done that with success?

As for connections, I must say that the FT-817ND manual is pretty bad at explaining how to hook it up.

On page 38 the manual discusses SSB-based AFSK and shows the radio connected to a TNC.

Then on page 39 under PSK-31, it says only to "Connect the FT-817ND to your computer's sound card or interface" without going into any detail on how to do tyat.

I can only assume that the connections for audio are the same as shown on page 38, but they don't say that explicitly.

The big question is, how is the PTT connected? Does that operate off of DCD or DTR on a serial port? If so, note that the voltage coming out of a serial port's handshake lines can be as much as +/- 15 volts and still be within the RS-232 spec. I find it hard to believe that +/- 15 volts on the PTT pin of the radio is OK.

Of course, if the VOX circuit is active and can hear the audio from the data connector's Data In pin, then VOX could be used to switch to transmit mode.

Do any of you know if VOX will work in PSK31 mode?

Thanks and 73...

Hello,

Why do you seek problems? Doesn't it have a mini DIN connector to connect a TNC?
Personnaly I recommend an interface to plug the TRX to the computer... Guess why.

Soundcard interface schematics on this page:
http://perso.wanadoo.fr/f6crp/denis/psk31.htm

I homebrewed one and sent some pictures on the packet net.

The mini DIN connector is standard so if you find one pinout picture you are saved.

I had an 817, and ran the transmit and receive audio directly to the sound jacks on my laptop with no issues after I got the levels set correctly. It's possible you may have to pad the output to the rig a bit depending on what sound card you have.

> The big question is, how is the PTT connected? Does that operate off of DCD or DTR on a serial port? If so, note that the voltage coming out of a serial port's handshake lines can be as much as +/- 15 volts and still be within the RS-232 spec. I find it hard to believe that +/- 15 volts on the PTT pin of the radio is OK.

I made an optoisolator from an led and a phototransistor from Radio Shack. The led went to DTR with a current limiting resistor, something like 5K I think, and the phototransistor went to the PTT input and ground.

Then I set PSK mode to USB for the PSK entry on the menu, and it worked fine.

I found the unit to work fine. My only gripe is that the mic cable supplied is pretty short (about 16 inches). I feel it should be about double that length.

APRSPoint is the latest APRS implementation that integrates seamlessly with mappoint to allow you to track anyone on a street level detailed map. It handles imput from RF and internet feeds, and works with Kenwood radios with built-in TNC's in an easy to use interface. It is considered to be the most stable and intuitive, and ideal for first time users. We are offerring a special discount right now. Please visit http://www.aprspoint.com for details. Thanks.

Howdy!

I've touched wireless systems before but not enough to be dangerous. My background is in software and IPv4.

I have an applicaction in mind for wireless transmission. It would be very narrow band and low bit rate (obviously), multicast transmission. The client side is reciever only.

In this case AX.25 is overkill, as none of the collision management is required. As I understand it, what I need is modem, a radio, and a OSI Layer 2 frame type suitable for wireless transmission. Would PPP or HDLC work as a frame type? Is there something better suited to narrowband wireless?

I don't really understand the actual signal modulation too well. If I said I wanted to span a particular frequency range, doesn't that frequency dictate the amount of asynchronous bits than can be modulated into it? So the modem would have to be tunable right? It would have to modulate specific to the spectrum in use. So I'm taking it there is a standard, or do the modems you guys use have a knob to control the modulation rate? Say the modem buffers 300 bps on the RS232 port but only has the spectrum to transmit say 200 bps through the radio? Or am I running into "why the hell would you do that?" territory?

So what the minimum hardware/software required to drop one ip datagram onto a wire and get it transmitted in say a 10Khz wide band?

-Matt

```

Hi Matt

One of my favourite topics, not necessarily as an expert though!

One of the big killers for any radio circuit is what to do when the data doesnt get through. Pretty well all commercial systems employ forward error correction in the outgoing signal. How much FEC is used depends on how bad the circuit *can* get. AX25 handles the issue by doing a full packet retransmit and the HDX action and paclen can kill throughput pretty badly if it has to happen a lot. There have been a plethora of (amateur) modes more recently than packet that employ FEC at the transmitted level.

Assuming you dont need to run IP I guess the best code for multicast might be the Wyman/RDFT stuff that runs under such pgms as Digtrx. (A SSTV pgm that says the RDFT stuff is a "digital mode") In it simplest form you encode a binary file into a sound/wav output, add some (start tone) headers and the transmit away. One of the command line arguments to encoding is the amount of FEC added to the output. The receive end decodes the wav file back to the binary file. The interface is a pretty simple DOS or Linux CLI function that you can add your own code to. There is of course a bit more to it that I will elaborate on if you are interested. OBTW the data rate on a 2.4khz SSB channel is between about 300 and 900 bits per second depending on FEC selected. It can also repeat missed blocks if you setup a kind of handshaking. I have personally played with the code to get a better rate on a 2m FM channel. The test I ran had 1.5x the rate working without probs.

The main RDFT/Wyman site is;
http://www.svs.net/wyman/examples/hdsstv/index.html
and some more info at;
http://www.tima.com/~djones/rdft.htm

As I said it isnt meant for UDP/IP

If you have to send UDP/IP packets have a look at the soundmodem/flexnet system (Windows and Linux). You can use the RDFT code in that as well (They call it newpsk). I dont have the URL handy sorry.

You can also of course get stuck into the GPL s/w for the slower keyboarding style modes like PSK,MT63 etc. Such techniqes as simple FEC and data interleaving might work for you. I personally want to play with some very narrow bandwidth stuff on 2m (like <50Hz) to a mobile and will probably look at modifying something already available. (The challenge here will be allowing for the phase noise and Doppler...) if you want to look at source code you might like to review gMFSK at;

http://gmfsk.connect.fi/index.html

It is written for Linux but I am sure you'll be able to find the useful parts. Likewise this isnt meant for UDP/IP.

Both of the above are meant for PC sound card interfacing

But back to your original questions!

The first kind of packet data modes were FSK (frequency shift keying). The more recent ones tend to be PSK (phase shift keying). The RDFT stuff for example is 8 PSK carriers in the "normal" voice bandwidth.

If you use regular AFSK packet to a receive only system it cant correct errors by retransmission as it wont know to do so. You need FEC in whatever you send.

PPP gets upset if you use half duplex. A lot of IPCP etc pckets also fly down/back the link and are part of the "is it still working can you hear me?" system. You would also get into a huge mess if the headers were damaged in transit. You can FEC the payload easily but not the headers. I guess you could encapsulate it in a RDFT style FEC stream but why bother if the s/w is already around the sticks IP inside of it. I have heard that SLIP is a good alternative to this so you might just get away with applying your RS232 port to a modem, thence to the radio. The lack of FEC would still kill you though. There maybe code that exists to do this but I havent checked.

You can think of a radio data stream as having a fixed rate that sends in synchronous bursts. There always has to be a buffer between the sender and radio/modem. There tends to be an agreed standard like the original AX25 rates of 300 and 1200 bits per seconds. RDFT also has a

fixed rate but the soundmodem drivers allow you to set a number anywhere
you like between two limits. The tones/shift (in the case of FSK) and
phase shift (PSK) are also agreed upon.

Hope this hasnt confused too much and is useful to you.

Does your app really need IP transmissions? That can be a real bear if
you dont turn off all the other stuff that flies out the port (like
ARPing etc) What platform are you writing for?

Cheers Bob W5/VK2YQA East Texas.

Reply address is valid.

Awesome information!

What I am working on is really the development of a transmission standard for some data that has some fairly specific requirements. It is multuser to multiuser, with the server side being internet based and the client side being simplex wireless. The setup is probably similar in practice to how pagers are used now, except that there is a custom presentation layer. Each client recieves more data than does a pager, but the number of unique clients is far less, say less than 256 different client identities, with potentially thousands of replications of each identity.

A proxy is at the center of the whole thing sort of like this:

WebBrowser->Internet->WebServer->Database->PresentationLayerConversion->Internet->Proxy->Radio->Wireless->Client

Multiuser write, multiuser read, where the proxy is a basically a packet stripper. The reciever side does need to be able to differentiate between different destinations like a pager. So it made sense to me to just just use IP multicast addresses as wireless client addresses, and then the proxies could recieve on the same multicast addresses, manipulate the packet, and bridge it straight onto the serial interface. Basically I could IP/multicast internationally over the Internet, and then sprout wireless nodes from regional base stations without having to do any address conversion.

So the radio/modem buffers the bits, and for a fully variable spectrum selection I should look at RDFT. Linux would be the obvious choice for development because of the amount of available driver code.

Tons of great information! I will study it and get back to you!

-Matt

There was a multicast (server to multiuser) protocol developed a few years ago by John Hansen.

"HamWeb: Rethinking Packet Radio", John Hansen, WA0PTV,
SUNY Fredonia, Proceedings of the 16th ARRL/TAPR Digital
Communications Conference (Baltimore, 1997) pg. 41-47.

He distributed the software on the TAPR website.

Okay so IP multicast it is? Keep in mind that most public (Internet) routers deliberately block multicast so you'll probably need to encapsulate it in something first like and IP-IP tunnel to each of your transmitter sites.

What is even stranger is that I was involved in a VHF pager project that needed simultaneous broadcast around an entire state via a low bw satellite delivery system. I think they also ended up using multicast.

If you want to stay away from multicast, I would suspect that if you stuck with TCP in the internet portion, then wrote a simple inetd handler (at the proxy where the transmitter was) to process the data stream, that would be simplests. Your handler could then so whatever it likes with data, making it RDFT, save to file and spawn some other process or whatever. This is the same basic method by which terminal servers work, encoding something like an RS232 stream inside a TCP transport then extracting it back to RS232 at the other end again.

It may even be worthwhile setting up a SSH linke to each of your TX sites, then passing whatever you like over the connection. Good for security.

Enough waffle from me!

Cheers Bob

>In this case AX.25 is overkill, as none of the collision management is required. As I understand it, what I need is modem, a radio, and a OSI Layer 2 frame type suitable for wireless transmission. Would PPP or HDLC work as a frame type? Is there something better suited to narrowband wireless?
>
>I don't really understand the actual signal modulation too well. If I said I wanted to span a particular frequency range, doesn't that frequency dictate the amount of asynchronous bits than can be modulated into it? So the modem would have to be tunable right? It would have to modulate specific to the spectrum in use. So I'm taking it there is a standard, or do the modems you guys use have a knob to control the modulation rate? Say the modem buffers 300 bps on the RS232 port but only has the spectrum to transmit say 200 bps through the radio? Or am I running into "why the hell would you do that?" territory?
>
>So what the minimum hardware/software required to drop one ip datagram onto a wire and get it transmitted in say a 10Khz wide band?

Several things come to mind.

1. Does it have to be an IP datagram? Does it need error detection? Error correction? Maximum/minimum size?

2. What sort of data rate can you deal with? Is one bit per second fast enough? Do you need 10 megabits/second?

3. What sort of coverage do you need? What signal to noise ratio can you expect? Given the bandwidth you gave, one expects sort of slow, but...

4. How does it compare to cellular transmissions?

5. How about ATSC (much bigger bandwidth and data rates, but you could have a bunch of separate PIDs for the different info.)

You need to address several levels of the communications model -- from the basic modulation, to framing of packets or data, to meaning of the content.

You need to learn more about data communications. There are some good books out there. Unfortunately, if you want to develop something commercial and not tell people what you are doing on usenet (a good idea, that), you will have to learn a bunch, or pay someone who knows a lot about it.

Alan

Howdy,

I'm interested in low level portability. The end-user portion the transmission standard is expected to be implimented in chips. But the the data-originator should optimize existing infrastructure. From that standpoint:

Browser->net->WebServer->Database->net->proxy->radio->wireless->client.

The segment between the database and the proxy really wants to be able to use IP as a network layer. If I was looking for a one-off solution I could cronjob an RCP. I would rather have a protocol instead because I want intercompatability between implimentations.

As a transmission standard I am thinking more layer 2 and up. Bandwidth usage should scale with the layer 1 medium. I don't need much band-'width' but would happily encode the bits on whatever frequency is most appropriate. 56Kbps would be nice but I could probably get away with 4.8Kbps

The actual frequency range I settled on will be dependent primarily on associated hardware costs. (on the client side, not the publisher side) I am guessing the L-band might be servicable considering there are already buku recievers units built for consumer GPS. Feel free to enlighten me if I'm totally off the mark there.

This service doesn't compare to GSM or equivilant. The protocol should not disclude terrestrial transmission, though sattelilte would be prefered due to fact that the customer base is global, potentially rural in many cases, and generally atypical of the GSM customer. I do have unique identifiers (for the data, as well as a client-id) that must be transmitted. These unique bits are expected to be read by a chip on the client side.

I am guessing that one of the issues here is that FEC seems to intigrate layer 4 and layer 1 of the OSI model into a single service. So wireless transmission and terrestrial transmission are a bit backwards. On copper, bits are reliable so error correction is mostly just CRCs. Dropping a frame is rare. With wireless the frequentness of dropped frames makes heavy error correction and transport control part of layer one. This makes following the OSI model from a development standpoint at least a little redundant past layer 1? Am I seeing that part of the issue clearly?

Thanks for the Ref to the ATSC, that will probably clear up a lot of my questions. You are correct, I do need to learn more about wireless communications. That is why I posted here. :-)

I'm guess what I'm looking at is writing a presentation layer protocol, encapping it in UDP, the proxy then strips the UDP header and reencaps my protocol into some form of ATSC protocol, which is then dumped into a modem buffer. Whalla, IP to end user.

(if only it was that easy)

-Matt

Hi all

Cross-posted... (3)

Having a play with Tom Sailors soundmodem code and wonder if anyone has come accoss any documentation explaining the use of file input and path etc simulations? I could no doubt work it out by playing but it would be nice to see what others have done! I want to prove it works under my system by creating and loading a couple of raw/wav sound files etc.

The alternative would be someone who has experimented with it and can give me some pointers. I'd like to know for example whether one should use different confguration files when swicthing between "live" and test modes.

Any assistance appreciated

Cheers Bob VK2YQA

Hello All,

I have uploaded SeaTTY 1.70 to the main site and mirror:

http://www.dxsoft.com/seatty.zip
http://www.hamport.com/seatty.zip

--
Best regards,
Sergei

==

SeaTTY versions history

V1.70
Minor improvements of raw log files handling were made.
V1.65
NOAA Weather Radio SAME messages decoding was made.
Voice message is automatically saved to a wave-file (5 min maximum),
SAME header of a message - to a text file.
V1.60
User can select a soundcard by "Setup->Soundcard Number" menu now.
The "Setup->Put Time Stamps in Raw Logs" option was made.
When this option is selected, SeaTTY writes local or UTC time at
beginning of each string of a raw log file.
V1.50
The documentation was updated. Some minor bugs were fixed.
[...]

Rigblaster sells a USB/Serial adapter made by IO Gear for use with the
Rigblaster.

Cheapest solution is go buy a hobby Remote control radio and receiver
either for an RC car or Airplane.

If you are a ham, you can get on the ham bands if you ask for them.

The Digital radios of 10 years ago where very good, I've not seen the
new stuff since then but I'll bet it's even better/cheaper than it was then.

I believe they did, however, you must not use encryption or use a "well known key" so the FCC can monitor you if it wants. Look at the ARRL's site for a "well known key". I would strongly suggest going encrypted though, because any fool with a laptop could connect to your system if you don't. (Not that WiFi encryption is all that great to start with.)

Frankly, you don't need to go part 97 here unless you intend to use more power than part 15 allows, or you want to use a beam antenna and get more radiated power than part 15 allows. But if you need to power up and cover the whole city for an emergency communications net, go for it.

Dick, I've been thinking of getting one of these, but my rig is an old Ten Tec Omni-D series B. Is it difficult to wire up a mic adaptor for these? My rig (and mic) want to see a standard stereo phono plug with PTT on the tip and audio on the ring.

It shouldn't be any more difficult to wire up than for any other
radio.  RigBlaster may even have the jumper settings for that
particular radio.  Send them an e-mail.

Dick

Please, does anyone know the home website for Drayton?  There are
plenty of resellers out there but I can't find the manufacturer's
site.

I've just had a new one of the above units fitted and am trying to
find out  how to set the time.

Amateur Radio Manufacturers and unfair pricing!

Here I sit the day after Dayton, calling around to all the dealers looking for a HF Transceiver. There were some fantastic prices offered on equipment (As much as $500 off list), and the dealers are back to charging full price today.

I am told by the dealers I called, that the Manufacturers were making deals with them so they could sell there inventories much cheaper, and the orders had to be taken at Dayton. Today, the day after when most of these orders had not even shipped yet, they are back up to full retail price.

To be fair, Manufacturers should allow these prices for a time period after Dayton to give other Amateurs who could not drive to Dayton an opportunity to get the same deals.

I think we should all write to them and let them know how we feel. This is unfair !

Cry us a river. They made the offers at Dayton and that was what they as
private businesses chose to do. You could have either went to Dayton or
found whatever way to get a radio from there. Get over it.

Hello,

I have been using APRS for years to track my vehicles, but I would really like to see more of what can be done on packet.

I have a setup that basically consists of a 2 meter HT/sound card/computer combo. I have been using programs like UISS and am able to see APRS traffic, and have verified that my packets are being digipeated via APRS by looking on findu.com.

For my next step, I would like to connect to a BBS, but I have spent hours online looking for local BBS's in the Dallas/Fort Worth area with no success. What is the best way to find BBS's?

I would also like to get into long distance chatting with users by making use of multiple digipeaters. How can this be accomplished? What do I set my "To" and "Via" fields to?

Any information would be great!

Thanks,
Dan
KE5BCC

Hi Dan

I dont know the physical location and frequencies of packet digis/nodes in the DFW area. This will be your first step to establishing how possible it is.

The "old" method of using a simple digipeat was to suffix your connect command with the digis in sequence. eg

```
C K5YYY v K5DIF1 K5DIG2 K5DIG3
```

I am sure you can also send in "UI" unproto mode (non connect) but I dont remember the syntax.

There are however a few different node systems available nowadays that allow you to use a single destination command that remember how to get there. These might be NETROM, ROSE, THENET and one or two others. You may have to go through a number of iterations like connect to a node, then connect to another "location" then to the end (human) device.

I guess however you already know this and simply need to know what devices are available! I have used the node in Tyler once or twice but that is probably out of your range. I dont as a rule keep packet running at my QTH anymore. My interest tends to be soundcard digtial modes on

SSB (2M is also good for that)

I suggest you lookup club webpages for more details. If you draw a blank
get back to me and I'll have a search myself.

Cheers Bob W5/VK2YQA East Texas

Hello,

Interconnecting APRS with the packet net? Hmmm, really bad idea...

I'm assuming you mean a Motorola Type II repeater like you would find in a commercial and/or public safety radio system?

If so that answer is no if you mean a direct connection to another conventional repeater. The connection would have to occur at the trunking controller audio switch or at the console central electronics bank (CEB) with the installation of a Base Interface Module (BIM).

I am looking into the possibility of buying a kit to assemble, but have
come across this statement in the warranty Ts and Cs:

~~~~~~
The use of acid-core solder, water-soluble flux solder, or any corrosive
or conductive flux or solvent will void this warranty in its entirety.
~~~~~~

My current reel of no-name solder is several years old, and I have no
idea whether it complies or not (but I suspect not).

What kind of solder should one use these days?

Find out whether the components are RoHS compliant.
If they aren't, your old solder will do.
If they are, you'll need lead-free solder.

Hi Ian,
It may or may not help, but this is a subject that comes up regularly on the Elecraft reflector. So much so they have a separate section on the web site. See if this helps:
http://www.elecraft.com/solder_sources.htm

Or, if the kit came from the USA, he could ignore what I said :-)

The Murraycans aren't in the EEC (or whatever it's called this week),
so I don't s'pose they're too worried about complying with RoHS.

Hi Ian

I suspect they are talking about plumbers soldering methods that use
such fluxes etc. Rosin core or the more current electronic fluxes will
be fine, which is probably what you roll is.

There is also the move to lead free. These joints always look real bad!

Cheers Bob VK2YQA (who works in a production RF/SMD environment..)

Lead free solder is impossible as solder is an alloy of lead and tin.
Anything else would not be solder!

And you will probably need to replace your soldering iron too.

Unless it's a decent TCP in which case you might only need more mass
rather than a higher temperature.

One important note; do not mix solder types.

While lead free solder is the norm now...

The use of solder with lead is still permitted for...

Private use.
Repair of circuit boards that have leaded solder on them

and a few other situations that I can't recall.

Lead based solder looks likely to be on the market for some time to come.

I thought it was the other way round - leaded solder is ok with all
component types but lead free solder shouldn't be used with components
where the leads have lead in the plating. All the manufacturers I've
checked with say leaded solder is ok with RoHS compliant parts.

I don't think there is any practical reason why you cannot use traditional lead based solder on RoHS components, is there? Its just another barmy EU regulation to make our lives difficult. There may be aguements the other way round - lead free solder requires a significantly higher temperature and components which are not specified to work with it could be damaged during assembly - I guess...

It's all down to interfering busybodies who demand that anything considered
harmless must be curtailed. Fumes from leaded solder especially in a
confined area can be considered highly toxic and if 'sniffed in' in large
amounts can send you loopy at best and kill you at worst. Therefore RoSH was
dreamt up by someone with far too much time on their hands to try to make
everyone's life safer.

Makes you wonder why they don't concern themselves with the biggest killer
of all time.. smoking.. well, the answer to that is simple... MONEY.

73'

Of course - from a practical viewpoint, it will work fine.

>From a compliance viewpoint though, you end up with a product labelled
to the effect that it does not contain lead (or other harmful
substances), that does in fact contain lead.

Shirley the fumes are from the flux, not the solder?

RoHS is to address heavy metals in post-consumer waste re-entering the environment via landfill sites.

Yes - I meant my comment only about the metallurgy of the joint. As I
understand it, private individuals aren't expected to abide by RoHS and it
won't be applied to personal (as opposed to business) sales.

Wel,, it depends on which Pb-Free alloy is chosen. There is no
industry-agreed standard composition.

In general there are two competing systems:

Tin-Silver (Sn-Ag) and Tin-Bismith (Sn-Bi).

If Sn-Ag is used, then mixing standard Lead-Tin (Pb-Sn)with it is OK.
If Sn-Bi is used, however, there is a low-melting ternary Pb-Sn-Bi compound
that can cause you problems. Not all electronic component manufacturers
have decided against Sn-Bi (it costs less than Sn-Ag).

So the key is determining you have Sn-Ag solder on your Pb-Free component
(or in some cases, no solder on the component).

Roger

Yes there are fumes from the flux, obviously. The lead content in the fumes
from molten solder is still toxic. It is another of the reasons (apart from
cost) that you won't find lead pipe in new houses or lead based paint.

> RoHS is to address heavy metals in post-consumer waste re-entering the
> environment via landfill sites.

Yes it is. But I thought the waste side of the proposal was covered by the
WEEE regulations and the RoSH covered the fact it is a Hazardous material to
use .. period.(Please excuse the crass Americanism ;o)

Thanks for that - I haven't encountered anything with Bismuth yet. Plain
tin plating seems most common amongst what I handle.

Which makes it very frustrating that the net aimed at mobile phones

and MP3 players turned into a sieve to encompass low volume long life
items in fixed installations and even church organs....

Now are you seriously trying to tell me there are NO traces of lead in the
flux fumes? Are you certain about that?

LOL.

In all seriousness though there must be an element of lead in the fumes no
matter what the supposed vaporisation level of the solder is. As in much the
same way as harmful levels of lead were found in water running through lead
pipes. These pipes weren't at vaporisation temperature to pass small amounts
into the water running through it. Likewise the flux core in the lead solder
would 'surely' have a concentration of lead in it no matter how
insignificant an amount it might be.

yes, that would be called leaching, and lead does not leach into the
air.  it would also be due to water 'erosion' of the solder. it IS
rather soft..

yes, I am serious.  no lead in the solder fumes.

if there was lead in the solder fumes, then most every ham end
electronic tinkerer would have serious health problems.  (hey, wait a
minute... ;->   just kidding.  no lead in solder fumes.)

Ahhhhhhh

That explains it

And

Confirms the ramblings of MattD

Where is he by the way

Someone hasn't filled is boots with lead and heaved him overboard I hope

Unlike Nick he will be missed

Sorry, but that's no longer possible. RoHS came into force on July 1st.
They would have to have filled his boots with non-toxic lead
substitute.

As for heaving somebody overboard, please remember that Dihydrogen
Monoxide restrictions will come into force as of September 1st. Please
see http://www.dhmo.org/ for more details.

that's much the normative behaviour of our interpretive legislators -
take a simple EU directive, bloat it out of all proportion, then when
there's a complaint, it can be pinned on those nasty EU beaurocrats.
In the meantime they'll get knighthoods for being so diligent - much
easier than polishing the handle on the big front door..

Ah, it's medication time. Nurse!!!

>except that there is NO LEAD CONTENT IN THE FLUX FUMES.
>Lead does not vaporize until much higher temperature than soldering
>temperatures...

There will be lead in the fumes; molecules regularly detach themselves and float off into the air from liquids (and can also do so for some solids under certain conditions) at well below the vaporization temperature, perhaps you have not noticed that water at room temperature will evaporate, remember: molten is a liquid. This is why mercury spills are such a problem, and why several years ago laboratories (schools etc.) had to incur expense having floors lifted and mercury removed by special vacuum cleaners, and using mercury vapour detectors to variety 'safe' levels. A few weeks ago I had to clean a spill caused by a broken thermometer from a cupboard.

so, what protection should we use when soldering? how much lead would
have been ingested?

Having worked in a production and engineering environment for many
years, I would think that were there any risk of lead in solder fumes,
there would be HUGE guidelines from the EPA. but, there are none. we had
fans and filters to control the flux fumes, which were quite pungent.)

in your logic above, chemicals that are far fro similar are being equated and their properties simplified. water and mercury are liquid at room temp.
mercury, like lead does not evaporate at soldering temperatures.

(for ref: vapor pressure of water at 100C is 760 MM, or > 100X the below. try putting 37 C or even 200C in the math below, and I think the answer will be that the vap press is minute and unmeasurable.)

-----

http://prola.aps.org/abstract/PR/v26/i6/p851_1
Vapor pressure of lead, 1118� to 1235�C was found to vary from 5.70 mm to 19.70 mm in good agreement with the equation log10p(mm)=-10372/T-log10T-11.35, which also fits the best results of Egerton at lower temperatures. The heat of vaporization of lead at its melting point is calculated to be 46,300 cal. The chemical constant comes out -1.40 which is close to the value -1.59 computed from the quantum theory of monatomic gases.

----

no one I know solders at 1118 degrees c or higher?

water has a vapor pressure FAR lower than lead. please realize that the vapor pressure of lead and the vapor pressure of water are NOT close in value.

by the above logic, my desk is evaporating. I know ice can evaporate. how do can the the number of formica molecules floating out of the kitchen counter be calculated or measured?

here is a bit from wikipedia.

Vapor pressure is the pressure of a vapor in equilibrium with its non-vapor phases. Most often the term is used to describe a liquid's tendency to evaporate. It is the tendency of molecules and atoms to escape from a liquid or a solid. At any given temperature, for a particular substance, there is a pressure at which the vapor of that substance is in equilibrium with its liquid or solid forms. This is the equilibrium vapor pressure or saturation vapor pressure of that substance at that temperature. The term vapor pressure is often understood to mean the saturation vapor pressure. A substance with a high vapor pressure at normal temperatures is often referred to as volatile. The higher the vapor pressure of a material at a given temperature, the lower the boiling point.

the end.

There may not have been any EPA guidelines in the past ... but there are
now.  I see them every day, all solder stations in our plant haves mandated
exhaust facilities - even labs.  Particulates are more of a concern rather
than vapors.

Hi all,

I had been searching the 'net for simple digital frequency discriminator algorithms (fm detection, eg for SSTV etc) but have not really found any suitable info. In the mean time though, I figured out what I think is a simple solution to this problem and tried it, using my computer's sound system to digitize a sinewave signal from my FT847 rig (tuned to a MW BC station in CW mode and using the narrowest filters).

The results were mixed, with an accuracy of about 1% in many readings but with a small portion of them having large errors > 50%. The errors seemed to be spaced at 1/4 of an audio cycle and near peaks and zero's. But before I speculate on possible causes, I would like to take the liberty to describe this algorithm so that experienced DSP boffins might first judge the viability and/or correctnes of it.

In a stream of digitized samples of a sine wave, the value s of a sample is given by s = V * sin(F) where V is the peak amplitude and F the phase of the sine wave at the moment the sample was taken. If we take three consecutive samples, s0, s1, s2, we can form the following set of simultaneous equations (by expanding sin(F+dF) & sin(F-dF)).

1. s0 = V*sin(F-dF) = V*{sin(F)*cos(dF)-cos(F)*sin(dF)}
2. s1 = V*sin(F)
3. s2 = V*sin(F+df) = V*{sin(F)*cos(dF)+cos(F)*sin(dF)}

where dF is the phase difference between successive samples.

By adding 1. and 3. we have:

4. s0+s2 = V*2*sin(F)*cos(dF)

By substituting sin(F) from 2. we have:

5. s0+s2 = V*2*(s1/V)*cos(dF)

So finally solving 5. for dF we have:

6. dF = arc cos{(s0+s2)/(2*s1)}

The frequency f of the sampled signal can then be estimated by:

7. f = (df/2pi)*S or
     f = S*arc cos{(s0+s2)/(2*s1)}/2pi (2pi=2*pi)

I tried this formula by feeding it with calculated samples and it worked fine. In practice, the expected problems I had were division by zero when s1 = 0 and failure of the acos() C function when (s0+s2)/2s1 > 1. But there were inaccuracies in he results as I mentioned near the peaks and zeros since it seems errors in sampling by the dsp distorted the relationship between consecutive samples.

I am using Linux and an AC97 type on-board sound system and I already know there are some bugs in the ALSA (the Linux sound systems project) drivers. This is especially obvious when sampling at a non-native DSP rate (other than 48 Khz / 16-bit linear) where the sound driver has to resample the output.

I would be greatful for any input on the "legitimacy" of the above derived formula and/or its weak points, so that I can furher study the output of the DSP for possible errors (not very easy ;-)).

My apologies for a longish and/or possibly boring article!

73's de "Nick" 5B4AZ http://5b4az.mattsnetwork.co.uk/

Gidday

The setup looks okay at first glance,

Is a -0 SSID valid for a hardware address?

Is gfk@ali a root user? I had lots of trouble running TCP/IP AX25 apps as a non priv user on my old SuSE system. Something about denying port access. Didnt actually try "call" in user mode though.

Strange how SLUG's ifconfig doesnt show the hardware address. There has to be an ARP system somewhere. ie the TCP/IP system must know which hardware to bind to, then a map of the remote devices IP vs hardware layer address. One of the first things that happens in a TCP/IP conversation is for the sender to shout out on the network "who has this IP address". The unit that has the address says "me me me!" which advises the sender the correlation between hardware and IP.

Perhaps ARP is timing out? Hmmm. Well you can certainly add a static entry for each end of the link. This will also make first data exchange a little faster;

```
arp -a - lists the known table
```

On ali
```
arp -s 172.25.25.2 VA2JF-0
```

On SLUG
```
arp -s 172.25.25.1 VA2JF-1
```

On slug you also might like to set the HW address manually;

```
ifconfig ax0 hw ax25 VA2JF-0
```

Then try the ping again..

Tell us how you go..

OBTW I remember too that tcpdump doesnt work on an ax25 interface. You might try that to see if you get any valid data. This will show the arp conversation as well as IP> Ethereal is also a nice GUI of this.

Cheers Bob W5/VK2YQA East Texas

Oh and another thing

PPP may be much more desirable because you can get huge compression gains (ie using BSD or deflate compression) I use to use it over an old 28K8 modem connection and got data rates in the order of 20-30x when moving logfiles around. As its compressed before it gets to the modem you arent limited by the 115K2 DTE rate either..

Bob, thanks a lot for your help.

> Is a -0 SSID valid for a hardware address?

That's what was given in an example I followed, but I changed VA2JF-0 to VA2JF-2 just to be sure. It's also easier to match each host to it's IP address: VA2JF-1 has 172.25.25.1 and VA2JF-2 has 172.25.25.2.

> Is gfk@ali a root user? I had lots of trouble running TCP/IP AX25 apps
> as a non priv user on my old SuSE system. Something about denying port
> access. Didn't actually try "call" in user mode though.

gfk@ali is not a root user, but I'm using sudo, so it shouldn't be a problem. This is a good advice, however. I'll use root whenever I playing with this.

> There has to be an ARP system somewhere.

Indeed I think that the problem might be related to ARP. I used to think that ARP was just used on Ethernet, but I learn something new every day.

Here's what I got on ali:
```
ali:~# arp -an
[=2E..]
? (172.25.25.2) at <incomplete> on eth0
ali:~# arp -H ax25 -i ax0 -s 172.25.25.2 VA2JF-2
ali:~# arp -an
[=2E..]
? (172.25.25.2) at VA2JF-2 [ax25] PERM on ax0
```

Unfortunately, the slug is running busybox which is a very slimed down Unix. It looks like busybox's ifconfig is not compatible with ax25, hence the "Link encap:UNSPEC". I would like to try to compile a "real" ifconfig but unfortunately the slug is running with 288KB of free disk space. I'll need to transfer the system to a bigger flash drive when I get some free time.

Also busybox doesn't have /usr/sbin/arp on the system, and /proc/net/arp doesn't list any ax25 address...

> OBTW I remember too that tcpdump doesnt work on an ax25 interface. You
> might try that to see if you get any valid data. This will show the
> arp conversation as well as IP

You're right:
```
ali:~# tcpdump -eni ax0
tcpdump: unknown data link type 3
```

I found a patch for tcpdump to work with ax25, but didn't tried it yet.
http://he.fi/archive/linux-hams/200509/0060.html

> PPP may be much more desirable because you can get huge compression

PPP requires full duplex and any radio link is inherently half-duplex.
I had to use "full duplex simulation" in the radio firmware which is
documented like this in the manual:
=3D=3D=3D=3D=3D
Full Duplex: This mode restricts Client radios to transmitting on odd
numbered frequency hop bins and the Server to even numbered frequency
hop bins. Though the RF hardware is still technically half duplex, it
makes the transceiver seem full duplex. This can cause overall
throughputs to be cut in half. Note: All transceivers on the same
network must have the same setting for Full Duplex.
=3D=3D=3D Ref: http://www.aerocomm.com/Docs/User_Manual_CL4490.pdf (p.16)

Also, the RF baud rate is fixed at 76.8 Kbps, so in "full duplex
simulation" it is effectively 33.6 Kbps. Even with compression, I
speculated that half duplex AX.25 would perform better for activities
such as web browsing where most of the heavy content (jpg images) is
already compressed.

I'll keep playing with this, thanks a lot for your help,

>http://he.fi/archive/linux-hams/200509/0060.html

I tried the patch, it works well. It's worth a try. The patch did not apply cleanly, however. I had to apply some parts of the patch manually. For those who don't want to do that, I've made a tarball of the patched sources:
http://guillaume.filion.org/tcpdump-3.9.3-ax25-1.tar.gz

Here's the short readme:
Full infos about this patched tcpdump available at:
http://he.fi/archive/linux-hams/200509/0060.html

To build this version of tcpdump:

```
cd libpcap-0.9.3
./configure
make
cd ../tcpdump-3.9.3
./configure
make
./tcpdump -eni ax0
```

Okay I see.. problems problems! <grin>

When I first started playing with TCP/IP over packet maybe 12 years ago we did all we could to stop ARP broadcasts in our local subnet. All of the users had static ARP tables for that reason. We also had static host lookups. More recently I was involved in an IP over satellite paging/short message system where our initial bandwidth allocation was very small (3kb/sec). I made a lot of noise over that setup and suggested that if the b/w was unchangable then we should use static ARP tables. They increased the b/w instead, as a manual maintenance of an IP networks ARP's is a huge task!

If you arent intent on using busybox you may want to try the Knoppix run from CD version that has the amateur radio add-ons.

re PPP and HDX/FDX. Well in a way you are simply shifting the HDX switching back to the computer instead of using the radio hardware. I'd suspect that in the end you wouldnt do any better. I am however prepared to be shot down over this!

I wonder if SLIP is any better handling HDX? It has less protocol overhead as well.. (from memory) Not sure about compression though.

I have an application of sorts for this same mind of thing. My mother in law lives about 500 yards away just over the brow of a hill. There are also lots of trees! I doubt 2.4GHz will work and was looking at something with at least 115K throughout to connect her PC to our network. What has been your experience with the 900MHz gear and how well does it do with path obstacles? Oh and what did the units cost?

Tnxs for the info on tcpdump. One day when I get back to radio...

Cheers Bob W5/VK2YQA East Texas

Hi Bob,

I compiled net-tools on the slug and I now get this, which looks much better:

```
root@slug:~# ifconfig ax0
ax0       Link encap:AMPR AX.25  HWaddr VA2JF-2
          inet addr:172.25.25.2  Bcast:172.25.255.255  Mask:255.255.0.0
          UP BROADCAST RUNNING  MTU:1500  Metric:1
          RX packets:52 errors:0 dropped:0 overruns:0 frame:0
          TX packets:22 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:10
          RX bytes:4238 (4.1 Kb)  TX bytes:898 (898.0 b)
```

net-tools also provided a version of arp. When I use it, though, I get this strange behavior:

```
=3D=3D=3D=3D=3D
root@slug:~# arp -an
? (192.168.0.5) at 00:01:53:80:57:E6 [ether] on eth0
root@slug:~# arp -H ax25 -i ax0 -s 172.25.25.1 VA2JF-1
root@slug:~# arp -an
? (172.25.25.1) at * [ax25] PERM on -
? (192.168.0.5) at 00:01:53:80:57:E6 [ether] on eth0
root@slug:~# cat /proc/net/arp
IP address   HW type  Flags  HW address         Mask     Device
172.25.25.1  0x3      0x6                       *        ax0
192.168.0.5  0x1      0x2    00:01:53:80:57:E6  *        eth0
=3D=3D=3D=3D=3D
```

I'm not sure if this is related to my version of arp or the kernel but I have a feeling that this is at the heart of the problem...

> If you arent intent on using busybox you may want to try the Knoppix
> run from CD version that has the amateur radio add-ons.

The slug is in fact a NSLU2 from Linksys, which is not much bigger than my hand. There's no CD player on this, so I'm stuck with busybox if I want to use the NSLU2. http://xrl.us/NSLU2

> re PPP and HDX/FDX. Well in a way you are simply shifting the HDX

> I'd suspect that in the end you wouldnt do any better. I am however
> prepared to be shot down over this!

When working in FDX simulation, the radio hardware does the HDX switching 50:50. This is fixed and cannot be changed. I hope that AX.25 will switch it dynamically, sometimes 90:10 sometimes 70:30, so that I can get better performance when I need it. I'm not sure if it's worth the trouble, however.

I bought the Connexlink radios a couple months ago from Mouser. I bought the starter pack (Includes 1 server and 1 client Unit, RS-232 cables, Antennas, Power Supplies and Software) for US$225 (Mouser Stock No. 814-CL4490-232-SP). About 1 week after ordering, I got a phone call from a ConnexLink technician asking for informations about my project and giving me his phone number if I needed any help.

My link is similar to yours, it's to my mother's house and I'm afraid that 2.4 GHz is not going to cut it unless I install a 100' tower on

each side. It's 2.9 Km long (1.8 miles). I have a hill and lots of
trees doing obstruction. Take a look at my path profile, I'm about at
F0.9. It's made with Radio Mobile:
http://www.cplus.org/rmw/english1.html

Path profile scaled 10:1:
http://guillaume.filion.org/80211link/images/fresnel-900-10-1.gif

Path profile not scaled (1:1):
http://guillaume.filion.org/80211link/images/fresnel-900-1-1.gif

I haven't tested the hardware outside yet -- it's winter time here and
I don't feel like climbing on the roof top full of snow. The specs says
it can do 32 Km LOS with the stock antennas. I'm not LOS, but with yagi
antennas replacing the stock antennas, I'm pretty sure that I could
have a decent link.

Common wisdom says that 900 MHz is too crowded for any good use, but I
live in the country and there is not a lot of 900 MHz activity around
here. The ConnexLink uses Frequency Hopping Spread Spectrum so it's
more resistant to QRM. Your mileage may vary...

Dont know about you guys, but since I still use an old 8 bit
Commodore128 computer I do all my packeting with the software
DIGICOM128 AND IT WAS WRITTEN BY THE GERMANS WAY BACK.
I use only the VHF band for military packet relays from
Ft Huachuca Az to Schofield Bks here in Honoululu.

I wonder if slug has an issue with dashes in the hardware address? Either that or it is smart enough to notice the first 5 chars of the hardware address are the same source > dest. As you say though it isnt working! Looks like you are getting closer!

Okay on the 50:50 half duplex timing of the boxes. That seems kind of a strange way to do it. Would have expected the manufacturer to use dynamic b/w allocation. I had a quick look at SLIP/CSLIP but didnt really establish how effective it was on HDX. I assume that ppp is unusable because of the backgound handshaking that goes on (ipcp etc)? Is it that or timeouts and retries at the IP layer?

Tnxs for the info on your purchase. I dont want to spend lots of dollars on my attempt. Would rather invest in 2nd hand than new equipment. The MIL is using dial-up at the moment so it isnt exactly urgent. I have a mind to use one of the scrap microwave radios from work but they start at 2.4GHz. (We manufacture data equip up to 12GHz and DS1 through E3) My path actually looks a lot better than yours though!

Cheers Bob

I'm getting ready to take a long-distance train trip

With very few exceptions, the route goes through VERY rural countryside.

I've taken plenty of train trips before, but this will be my first trip with an APRS setup onboard (GPS + Kenwood TH-D7A).

Any thoughts as to what is the best relay configuration (i.e. RELAY, WIDE vs. WIDE2-2 vs. WIDE3-3)? My biggest objective is to hit as many Internet gateways as frequently as possible. Not that interested in having the APRS data propagate over a wide area via RF unless that's necessary to make sure it hits an IGATE.

Thanks,

greg

RELAY and WIDE are not used any longer. See why here
http://web.usna.navy.mil/~bruninga/aprs/fix14439.html

Also, unless you have far better luck than me, your TH-D7 isn't going
to cut it. It's OK in a city, but when you get out in the sticks you
need POWER, and the TH-D7 isn't going to give it to you. Sometimes
even my D700A with external gain antenna won't reach a gateway. I
have stood in my front yard with my TH-D7, looking directly at the
mountain where the repeater is located, and been unable to connect
without moving around to different locations. Give it a try, but you
may be disappointed.

Yes, I realize that. How pervasive are the changes in the "infrastructure" though? I.e. how many digipeaters understand the new paradigm? A few? Most? All?

>Also, unless you have far better luck than me, your TH-D7 isn't going to cut it.

I have no illusions. This is an experiment more than anything.

Don't know Greg. You could probably get a lot of info on this by
searching through the archives of the ARES mail reflector.

I've been running the ConnexLink 900 Mhz serial modems for over a year now to connect my house network to my business network in a rural area. The networks are Windows based and the link runs PPP using the radio's full duplex setting.

The link is clean for ping, telnet, ftp, and email. Unfortunately, I never was able to get any browser to work without it coming to a screeching halt with lots of TCP/IP retransmissions. I contacted Aerocomm tech support (Sean) about this several times, but it appears that no one else really uses the ConnexLinks on TCP/IP (they have a newer product ConnexNet that does).

I really don't have a clue why the link fails with a browser, except that some piece of the hardware/software path must be failing with the heavy full duplex traffic created by browser and then snowballs with the TCP/IP retransmissions.

I am curious if you are able to get PPP to work reliably with a browser to web sites with a lot of graphics that result in multiple simultaneous connections. If you are (and I would not be surprised if your link would work, given the different hardware/software pieces), then it gives me hope that one day I might be able to get my link to work properly when I have the time to fix it. And if you get the radios to run faster on AX.25, then that is even a greater achievement.

By the way, my radio link is solid (no problem there). There are two yagi antennas pointing at each other and the signal is great even through the trees.

If I may answer first...

TCP/IP is suppose to self calculate retry etc periods based on the first few packet failures. I am surprised you are having problems with the link at all. Perhaps some massaging of the TCP retry parameters might be in order. I'll admit I dont know where to do that in Windows without looking it up. It will be as registry setting.

I wonder if you are also using plain serial ports at each end or some kind of ethernet converter. That can mess things up as TCP/IP thinks it has a faster throughput speed than it really doesnt. The other possibility is that serial hardware handshaking is broken although FTP would be affected by that. (Depends on the direction and which end has failed though) Lowering your DTE speed may also help.

As a simple workaround you can limit the number of concurrent http requests your browser will allow. Once again I dont know how this is done in IE but Firefox has a about:config parameter network.http.maximum.connections or similar. The end effect will be that web pages with lots of internal lnks (eg pictures) will tend to load more one after the other than bits at the same time. Email, FTP and telnet use a port for each direction whereas web browsers can use 100+ source ports to get a web page.

If you wish to try this and dont have Firefox, download it and gimee a shout and I'll walk you through the config changes.

I have also heard the SLIP might be a better way to go over these links because of the half duplex factor. I'll admit I havent tried this but it wont hurt to try. W2K and above have SLIP available if you want to play with it.

Strangely I am thinking of using a 900MHz serial link to my mother in laws house. The reason I am not using 802.11 Ethernet is path obstructions.

One option by the way, if you want to throw lots of money at it, is to setup a second link such that the whole things runs a "real" fullduplex.

Lastly I havent checked around on the web on this topic. Perhaps others have had this issue and found a solution.

Cheers Bob

I have been playing around with receiving AIS (Automatic Identification System) signals. AIS is used on ships, it is used to send information about your position, etc via VHF to the surrounding ships. But know this started to get a bit boring. So know I wan to try to se if it is possibly to receive the VMS signals from Inmarsat-C. The VMS system is manly used on fishing vessels. On the ship there is a box with a gps and satellite tranciver. The position information is send each hour, to a land earth station, were it is distributed to the different authorities.

The first thing is to receive the signals. But also to decrypt the data can be complicated.

Any help or advices are welcome. Also if you have some good links to people ho have been dealing with projects like this, could be useful.

Cheers Michael

The problem in your particular place might be that the mountain top digipeater is hearing so many systems from so many places that yours just isn't making it through. Especially if it can see other mountain top digipeaters.

That said I would think Greg would be far better off if he could put mag mount antenna on the top of the train.   <chuckle>

That might be the case, but we are in a pretty remote area. There is
no question though, that a power increase takes care of the problem.
My experience with the D7 includes a lot of travel in the west
(Arizona, Utah, Nevada) The ability to connect with a digipeater was
few and far between with the D7. Going to the D700 makes all the
difference.

Thanks Bob for all of your good suggestions.

I've tried playing around with some of the TCP/IP tuning. I also played around with the max-connections in Explorer and Firefox. Not much difference in performance. I did swap a unshielded serial cable (the radios are directly connected to the computers' serial ports) with a shielded cable, and that seemed to improve the performance. The serial lines are fairly long (60') to get to the antennas which are colocated with the radios. I would say the system is usable (slow) with a browser, but not good with heavy traffic, which results in significantly more retransmissions and reset connections.

The reason why the link is disappointingly slow is that it only runs at 19 kbps. According to the Aerocomm AC4490 manual, the maximum throughput of the radio in stream mode is 57.6 kbps, acknowledge mode is 38k and acknowledge with full/duplex is 19k (full/duplex is only supported in acknowledge mode). Running PPP or SLIP requires the full/duplex hardware, so 19k is all I can get.

I'm in the market for better but inexpensive 900 Mhz radios to replace the Aerocomms, if anyone has any suggestions.

That RS232/serial run is in my view way too long if you are running at 115K2, even when shielded. I would suspect that noise is being introduced into the circuit. RS232 isnt a balanced system like RS485 or XBaseT ethernet so you dont gain the benefits of common mode rejection. You may even have earth loops occurring in your computer/mains/ground setup that puts main noise onto the cable shield. The simple test is to reduce the DTE rate from the computer to the radio to the next step down to see if that helps. If the modems offer hardware compression you might lose your peak speed but gain a higher reliability. Generally speaking the slower the bit rate the longer the cable can be.

The data rate problem is the same thing that gfilion was fighting on. I understand the Aerocomm fixes the TX/RX ratio at 50% to make PPP work and thus you get the low data rate. You may of course also be suffering from radio interference. I remember the Cisco Aironet boxes use to keep stats as to their performance. If the Aerocomm boxes do that may be a place to check. One simple thing you can do if you think it is another transmitter is to change to horizontal polarisation in the hope that most other users will be on vertical.

I have had a look around for Ethernet radios on 900MHz and they arent real cheap (like USD700/pair etc). The serial offerrings all seem to have the same rate limitations you have encountered and as yet I havent seen a USB connected one (to gain a higher rate than 115K2). They seem to be more for telemetry/SCADA use rather than a FDX internet link.

My flippant suggestion to get another Aerocomm pair and connected them for full duplex operation might be cost viable for you. You'll need to play with the hardware a bit but I dont see any problems if you can tell the modems to stay in the right mode. I get the impression that this will then get you 57K6.

I am seriously thinking of taking some of my works 2.4GHz RF modules for TX and RX and supplying my own QAM modulation scheme to them. The idea being to run maybe 1MB/sec via the USB port. I can do that as a radio amateur but will need to check whether I can use the ISM band in that manner. I can certainly tune it to the FCC spec but dont know if I have to go through a type approval process. A very long term project I am afraid. In that vein I am also looking for AX25/packet QAM I/Q modems that would do that part for me.

Good luck!

Cheers Bob

>That said I would think Greg would be far better off if he could put mag mount antenna on the top of the train.

Nothin' doin'. Amtrak's Superliners are all-aluminum.

Here is a map of where I was able to make contact (circles with dots) with an APRS/IGATE digipeater on my trip. More than I thought, not as much as could be optimum. This was using a stock TH-D7A(G) with the stock antenna:

http://www.littlebear.com/TrainAPRS1.jpg

Here is a picture of my room/shack with the getup. Sorry about the resolution, I took it with my Motorola cell phone. Above my PowerBook is the Kenwood TH-D7A(G), to its left are the two GPS' (Garmin M5 and 60CS). You can see the GPS antennas on the window to the left of the GPS' too.

Yes, good suggestion. I am running the serial lines at 115K, I will try to run at 57 or 38 or even 19 and see if that improves the link.

Connexlink does have a signal strength register (report last RSSI) and has some DOS software to manage it, but I have been reluctant to spend the time on the radio section because the 19K limit is disappointing enough for web access, even if it were reliable.

I'm sorry I don't understand the radio pair suggestion; wouldn't the pair of radios just interfere with each other? Is the idea to hook the tx lead of the serial port to one radio and the rx lead to the other? How would they hook to the antenna?

Hi Braath

The kind of stats I am talking about is more the bit error rate one. ie what percentage of the radio packects are mangled or not getting through. It is common in a radio system to have some percentage of failure. I use to administer two non licensed links, one on 2.4Ghz and the other on 5.7. Towards the end of its useful life the 2.4GHz link had about 90% retries mainly from interferring sources. In that case we got much better reliability limiting it to the 1MB speed (as against 11). The newer less populated 5.7GHz link ran about 20% retries.

The fullduplex radio pair configuration I suggested would use separate frequencies and maybe even antenna polarisation/space separation to reduce interference. ie two antennas at each end. Using a diplexor to allow two boxes on the one antenna is probably a bit cost wasteful. The idea is that at one end you force one box into transmit mode and the other to receive. You also have to specify a fixed channel instead of allowing automatic operation. The node names would also have to be paired. Connection to the computer is as you stated but some configuration of the handshaking lines (RTS, CTS, DTR etc) would also be needed. I expect that Connexlink would have already done this with their equipment so there may even be an application note on it available. It would of course be smart to run all lines back to the PC and do the patching there, in case you want to send commands to the unit itself and need both TX/RX lines available.

Cheers Bob

My name is Michael. I'm educated as electronic mechanic. I started a project with the goal to receive and decode the VMS signals from Inmarsat. VMS system is manly used on fishing vessels. On the ship there is a box with a gps and satellite transceiver. The
position information is send each hour, to a land earth station, were it is distributed to the different authorities. I hope that many of you will help and contribute to get this working, because I don't have all the skills my self.

First I started to ask people in different news group about the subject. But I now realized that it will be a bigger task. So I have made a Yahoo group to get this thing going. I have in this group posted the information I have gathered until now. If you think you maybe can contribute to the project then, or is interested in this as well, then please join at

http://groups.yahoo.com/group/vms_group

Cheers Michael

Yeah .... I just recently bought a "Rascal GLX Mark V" and have not gotten
it to transmit as of yet. It seems to "hear" pretty well with my sound
card, which is an older Sound Blaster PCI 128. I've tried setting it up in
both Linux and Win XP .... same results in both OS's. My tranceiver is a
Yaesu FT-840. May just be that I'm missing the boat somewhere in the
setup, for in all fairness, while monitering PSK31 channels I've seen
several hams that ARE using the Rascal. If you get yours to work please
let me know what yod did to set things up right. By the way....I
understand that BUCK really g

I have two of the Rascal GLX's and have not had any problems. I use
one exclusively for PSK-31 on HF. I use the other for 2 meter Packet.

73,

Bill WB4WTN

What kind of computer are you using ? If you are feeding a usb port from
the computer and using a converter to go to a rs232 interface, it could be
the interface. Lots of the converters do not work correctly.
Try switching the rig to VOX and letting it key the transmitter.

RTTY software ?

Looking for a good send/receive software program just for running RTTY on a PC with XP op system. Trying out MixW, but really just want the RTTY operation; DigiPan takes care of PSK for me. Shareware or buyware - any recommendations?

I'm using a HP Pavilion 500 MHZ with the Sound Blaster PCI 128 sound card.
I also use both Mepis Linux and Win XP. Everything looks fine in both
OS's with the exception that on transmit, using WinPSK, and connected to a
dummy load .... monitoring the transmit level leads me to believe that I
am overdriving the output of the card. The color of the output signal is
red instead of green and looks as if it is being severely clipped. I have,
as yet, not found a setting, or combination of settings, that will give me
a clean looking signal that I'll not be afraid to put on the air. The red
LED on the Rascal blinks in step with the transmitted signal and the com1
PTT is activating my tranceiver as it should. Any suggestions on adjusting
the transmit audio? I have also tried the manual PTT .... I'm using a
Yaesu FT-840.
Jim

Resolved my problem with the Rascal also. Found a broken wire at the cable
mike connector. Works like a charm now! Would suggest to anyone who has a
problrm with this unit to first check the wiring.

Anyone have a lead on where I might be able to get the manual
electronically and the final run of EPROMS? Picked up a unit on eBay w/o
those and would like to find a manual and update the system.

Thanks in advance!

I have just aquired a Pakratt PK232 MBX

I wired up a RS232 25 pin cable using pins 1 through 8 and pin 20 only
(as stated in the manual), but my PC doesn't recognise the pakratt.

Does anyone know if in wiring up this cable pin 1 should be connected
to pin 1 on the plug on the other end of the cable? Corossed my mind
that it may have to be wired in 'mirror image' i.e. pin1 to pin13 and
so on.

Help please????

Mark

It's been a really long time since I had a PK232, but I'm pretty sure the cable is straight through. I recall taking a standard parallel cable and breaking off the pins.

I don't think that the computer will recognize the TNC, but you tell the
terminal program where to look for it.

Maybe you can get some left wing liberal whiners to feel sorry for you, but not
likely. This is a free market, remember? Or would you prefer the government
telling businesses what they can charge.

UNBELIEVABLE that some people expect soemthing for nothing all the time.

I'm current running Red Hat with the latest kernel (2.6.x) and the latest version of hfterm (0.7.3). I also have the most current version of alsa. The serial port (/dev/ttyS0) is correct and have two sound cards installed in the workstation, one is a SoundBlaster SB Live (EMU10K1) and the other is an Ensoniq 5880. I'm using the first soundcard as the modem (audio =3D /dev/dsp0 - audio=3Dplughw:0,0), based upon the advice from another ham who said that the Ensoniq is not the best choice for a soundcard modem. I have included the /etc/hf.conf for review. Thanks for the help in advance.

Sorry for the massive cross-posting but, I'm looking for the widest dissemination of my request for help.

```
#!/bin/bash

##    ***    ***         /etc/hf.conf        ***    ***
##    ***                            ***
##    ***       System-wide Configuration file for         ***
##    ***                 /usr/bin/hf           ***
##    ***            by G=C3=BCnther Montag DL4MGE        ***
##    ***                            ***
##    ***    ***    ***    ***    ***    ***    ***    ***  =20

## This config file will be included by /usr/bin/hf, the
## start script for hfkernel and hfterm.
## This is especially useful for the KNOPPIX linux distribution,
## where - if run from cd - there is no access to /usr/bin.
## If you do not configure things here, the default values in hf will be
used.
## Normally, these defaults should work,
## you might only have to configure your serial line here for transmit!

## There is a lot of documentation in English and German!
## See the HF-HOWTO in the doc subdirectory of the hf package
## or in /usr/share/<doc/><packages>/hf
## or F1 in the hfterm window under X.

## To configure, just remove the single comment signs '#'
## in the beginning of the lines you need.

## Serial line:
###############################################################
## please uncomment one of the following:
## 'Com 1' in DOS language would be 'ttyS0' and so on.
serial=3D/dev/ttyS0
# serial=3D/dev/ttyS1
# serial=3D/dev/ttyS2
# serial=3D/dev/ttyS3
# serial=3D/dev/ttyS4
##
#########################################################################=
######

## Sound card:
################################################################
## hfkernel has been written for OSS.
## ALSA, the newer sound driver system, emulates OSS.
## For both, OSS and ALSA-OSS-emulation, the soundcard can be approached =
as:
## /dev/dsp or /dev/dsp0 (the first) - this is the default setting, ETC.
audio =3D /dev/dsp0
# audio =3D /dev/dsp1
# audio =3D /dev/dsp2
# audio =3D /dev/dsp3
## hf now got additional code for ALSA without OSS emulation.
## To use it, the first soundcard is approached as 'plughw:0,0':
audio=3Dplughw:0,0
# audio=3Dplughw:1,0
# audio=3Dplughw:2,0
# audio=3Dplughw:3,0
## If you need the 'aoss' prefix for alsa oss emulation preload mechanism=
,
## uncomment this:
# alsa_prefix=3Daoss
## ( until now I did not hear of any advantage of this.)
#########################################################################=
######
```

```
## Time correction factors:
###################################################
## Normally for first start you do not need to change something here.
## For longer standing Amtor od Pactor connects, and also for MT63,
## a calibration might improve the performance of hf.
## See man dcf77rx, man reffreq, ratecal1, many examples in the HF-HOWTO!=

## You can enter correctioion factors here by hand, but dcf77rx and reffr=
eq
## can enter their corrections automatically at the end of this file.
##
## If your soundcard can do full-duplex, hfkernel uses the soundcard cloc=
k.
## You can enter a soundcard clock correction factor here:
soundcorr=3D1.0
##
## If your soundcard can do only half-duplex,
## hfkernel tries the RDTSC instruction for getting the time.
## For this you can enter the exact rate (in kHz) here:
#  mhzcorr=3D
##
## If RDTSC not working, (then you also might need option -R at
kerneloptions)
## hf uses the less accurate 'gettimeofday' for getting the time.
## Insert a gettimeofday correction factor here:
timecorr=3D1.0
##
#########################################################################=
######

## Other options:
#############################################################
## if other options for hfkernel are needed, insert them
## between the quotes, separated by whitespace, e.g. " -h -R ":
## If your cpu does not support RTDSC instruction: option ' -R'.
## If hfkernel crashes in full duplex mode: option '-h' (force halfduplex=
).
## If error message containing 'MMAP': option ' -n ' (no mmap).
## (If this is the case, try also the ALSA code, see above!)
## I put '-n' here as default for first start.
#  kerneloptions=3D"-n  "
#########################################################################=
######

## Combined start of hf under X:
##############################################
## If all is running well, the hf script will start hfkernel and then
## hfterm. hfkernel's debug output might be interesting, so originally  I=

## made it run on an 'xterm', a little read-only terminal, in the
## background of hfterm. With e.g. SuSE 9.1, the xterm slowed down the wh=
ole
```

```
## thing, which led to a crash of hfkernel. So now the xterm can be
## switched on as an option here.
## You will still be able to see hfkernel's output if you start hf
## from an X console.
#  x_prefix=3D"xterm -e"
## or, for debugging, try an xterm which remains after hfkernel`s quit:
#  x_prefix=3D"xterm -hold -e"
#  x_prefix=3D" "
#########################################################################=
######

## now hope all is correct, and have fun and good dx!
#########################
## 73 de G=C3=83=C2=BCnther and your hf - team
##
#########################################################################=
######
## From here on, if you use dcf77rx or reffreq, automatically
## correction factors will be entered, the last of each kind will be vali=
d.
#########################################################################=
######
```

Get a grip dude, that is the way sales work, it starts at a certain time and
ends at a certain. That time may not be on the schedule you like, oh well,
that is what being the guy setting up the sale is all about. Don't like it,
make your own product, market it, set up a sale and then let folks who want
the special price a day or two later have it, it will be your business and
you can run it any way you like.

Jeeze, I hate whiners!!!!

They are too dumb to realize that the ebay search will bring up the
item to those who are interested in finding it.

APRSPoint is the latest APRS implementation and it is being used in vehicle tracking, search and rescue, emergency communication and many other areas. It allows you to track persons or objects via rf or internet. It is constantly being updated with new features and improvements. We are offerring a special discount for this memorial day weekend. Please visit http://www.aprspoint.com for details and lots of helpful information about APRS. Thanks.

<snort!> Like Bellsouth cares. I've had lots of their IP space

blocked out of our systems for the last few years, mainly because they don't give a rip about spam, or the fact that their network is full of spammer-zombie PC's.

Keep the peace(es).

Hi!

SSB packet on 2m and 70cm? Maybe at 300Bd? Must be very easy and efficient...

As far as I remember, no mulimode dual-band mobile rig was ever produced.
Actually you only find IC-706 and FT-897 type mobiles with multimode abilities on 2 and 70.
And exit the monoband multimodes such as kwd's TM255/455 (no more produced)... For mobile action I'm using an old Yaesu FT-7100, which I also use for 1k2/9k6 packet with a TNC2-Multi (IfD, Germany) or a homebrewed soundcard interface and modern Software (Flex32, Paxon 2.00.1114, WPP 3.18, Soundmodem, under WinXP).

I think that in the USA, where 9k6 packet is a vague idea and TXDelays are sooooo loooong and fast switching is of no need, an IC 706 would do the job.
But I would recommend to take a rig with a miniDIN (sort of PS2) plug for packet/digimode action, so not really the Icom 706 brand.

The miniDIN tends to be a standard plug-and-play feature for most modern TNCs and digi-mode controllers.

And I'm quite sure you wiil need som links:

http://www.uspacket.org/
http://wpp.dc6hb.de/

http://www.afthd.tu-darmstadt.de/~flexnet/
http://www.paxon.de/

I intensionnaly do not give the paths to AGWPE or Winpack... I let you guess why.

If you are interestd in APRS, you can install WPP or use UI-View with AGWPE, but for Heaven's sake, do not use any AGWPE version for packet radio! The sysops and your packet mates will praise you.

73 de F8BOE Olivier ...-.-

I have an MFJ-1278B interface that works fine but when the power is removed from it, it keys the transmitters PTT line. I'm using it with a Kenwood 2000 which I don't think matters what radio it would be used with since it is going to ground on removal of power. I don't have a manual for it since I bought it off Ebay but it did come with the standard 1278 (not B) manual which appears to be a good bit different. Anyone have any idea what might be going on??

Tnx and 73,
Ken, WS4V

Efficiency is irrelevant.. this is for ARES use when all the
'efficient' systems are down.

> As far as I remember, no mulimode dual-band mobile rig was ever produced.

Yep. Looks like the IC-706 family will be much easier to put in my
Jeep than an FT-897/897D would.

Lots of 9600 baud out here in the Silicon Forest, up on the Left Coast.
http://users.rio.com/kg7fu/mopacket.html

> and TXDelays are sooooo loooong and fast switching is of no need,

Being rather new at Packet, I do not understand the latter two issues.

Why would I be swapping TNCs out? Once it works, it will stay
connected, and I think I'd add a mike/TNC switch.

Because, perhaps, you too are a Penguinista? Debian distros, e.g.,
Ubuntu or Kubunto, rock, and you can run Dam Small Linux, Puppy, and
other Debian-based compact distros off a 128MB USB memory drive, which
are absurdly cheap 'round these here parts.

Merci, many thanks, 73s & best regards.

Olivier & John-

The IC-706 Mark II or FT-897 may be easier to find. But what about the TS-790? I believe it came with dual band capability, and could have another higher band added.

(I have an original IC-706, which does not have the 450 MHz band.)

The only issue with APRSPoint is that support and upgrades are sorely
lacking. The Yahoo group he runs is censored so that any suggestions or
criticisms of his product are not posted.  He needs to really upgrade
this program. It is one of the most expensive and also has the least
amount of features.  Nice start, but the author needs to really spend
some time getting this program up to where all the other APRS programs
are in functionality.

Icom 910h is worthy of consideration dula band fairly high power
(option for 1.2 gig) neer heard of vhf.uhf packet on SSB but souunds
interesting

Please help a newbie: what is SSB packet?
I am guessing data in one sideband with 2.5 KHz bandwidth or so?
I still confuse PSK and packet.

Hello,

I don't think that the TS-790, nor the IC-821 or 910H were ever meant for mobile use...
Other interesting rigs are the FT-100D and the FT-857.

And no, I do not recommend AGWPE and Winpack because I can use Unix-based applications, but just because I tested them... And they both failed.

Winpack: really shiny with a lot of functionnality, but too complicated to configure, and only limited to the archaic FBB systems and unreliable 7+ file format. No Bin, no BinSplit, no Didadit modes. Too old.

AGWPE: the wannabe effective driver; wannado alot, ending like the swiss knives with doing nothing really the right way... Only good for APRS and overloading the packet net traffic with useless ack frames, a kind of100%

link quality with 0% file transfer rates. Sometimes I really wonder how people use packet radio... In passive-mode only...

So I will go on with Paxon, WPP and Flex32.

Hello,

I had the chance to step in packet radio with Baycom 1.6 under Win95 with a Baycom modem. So I had to learn fast to fix the problems and to set the parameters correctly...

TXD (x10 ms): delay between PTT action and packet frame launching. Depending on your TRX's PLL quality and the TNC/modem abilities. My FT51r and FT7100 handle TXD of 18 (180ms), the TM-255/455 go down to 12, the T7F (9k6/19k2 packet TRX) breaks the 50ms mark, but that with a TNC2; using a Baycom modem induces audio lag, so I had to set the TXD between 20 and 22 with the FT51r. In Europe, when your TXD is too long you get rejected... That's why you can only expect to work 1k2 packet with an IC-706 (a 300ms minimum is worse than a CB transceiver, so no Pactor too)

DWAIT/DW (x10 ms): mean time delay between end of reception of a packet frame and PTT action. If a frame is recieved in this time, there's no keing up. To give a connection chance to every other station, DW is a random parameter. For 1k2, a DW of 12 is pretty fair (10 or 12 for 9k6) but less than 10 is the crocodile way and you get problems with your mates and your digi sysop.

The packet frame is the audio signal coming after the end of TXD. So if your TXD is too long and your TRX can handle it shorter, you can connect and get rejected, or you cannot connect because your frame does not come out in the DW interval. If your TRX can not handle the right TXD, your packet frame is cut (and ignored).

9k6 packet is done in FM mode but it is not an F3E signal at all, as the G3RUH modulation is injected in the TRX after the audio mixer... So long for the miniDIN-6 (PS2) plug, and there's no need of a mike/TNC switch, when the 6-pin miniDIN is present.

By the way, there are two different pins on this plug for 1k2 and 9k6, so be careful, the signal peeks are not the same!

Other important things: Mouse cables are of no use, because even though they have 5 wires the 6th wire lacks on the wrong pin, so if you only need one connector, you must take a PS2/PS2 cable which you can cut in two pieces but no mouse or keyboard cable.
There are two miniDIN plugs on some TRXs, one 6-pin (PS2 type) and one 8-pin; for the TNC you must use the 6-pin miniDIN.

Well, it was a little bit long, but these infos and packet application test reports are on most packet BBS, so if you find an i-net packet BBS you should find what you need... Could also be in the europestuff on the american boxes.

Jawod-

For practical purposes, SSB and FSK Packet are the same, just different ways of generating the signal.

If you have an RF carrier and shift the frequency, you are switching between Mark and Space frequencies. A typical Packet TNC also puts out audio tones that can be used to drive the microphone circuit of an SSB transmitter. The resulting signal is equal in frequency to the carrier plus (or minus) the Mark and Space audio tones.

If you tune your SSB receiver to decode an incoming Packet signal, your transmitted Mark and Space freqencies should line-up with the received frequencies. However Mark and Space may be reversed. If it won't decode, switching to the opposite sideband and retuning should clear it up.

This is familiar; several years ago, I wrote the following note
about using a PS/2 keyboard extension cable:

That list appears to be 10+ years old. I wonder how many
of those nodes are still operating.

Besser Associates is offering their acclaimed "DSP Made Simple for Engineers" class in San Jose, California, on 16-18 August 2006.

This 3-day class is particularly well-suited to those involved in RF and Audio signal processing, and computer programmers, who need to learn the fundamentals of DSP theory. Details of this course, including target audience, learning objectives, course outline, materials descriptions, and past student comments are contained in this post as items "A" through "I".

To register, please contact Besser Associates at 650-949-3300. For additional course offerings, call Besser Associates or visit http://www.bessercourse.com/ to view our public course catalog and current schedule.

------ Detailed DSP course information follows ------

A. BESSER COURSE TITLE:
"DSP Made Simple for Engineers"; a 3-day tutorial course on digital signal processing (DSP) theory.

B. TARGET AUDIENCE

* The primary audience is practicing RF (and Audio) hardware Engineers and Software Programmers who need to understand digital signal processing (DSP) because of its ever-increasing role in the processing of real-world signals.

* While DSP Made Simple is not a "programming course", it is particularly well suited for computer programmers because of their increasing need to understand DSP algorithms.

* In general, this course is beneficial to anyone involved in the acquisition, generation, transmission, filtering, or analysis of digital signals.

C. WHAT THE STUDENT GAINS FROM THE COURSE:

* The ability to apply DSP techniques to real-world signal processing problems in their work.

* A solid grasp of DSP basics and the ability to move gradually to more sophisticated DSP concepts and applications.

* The ability to speak the language of DSP.

* Much practical information on how to optimize (streamline the computations of) the algorithms of DSP.

* The ability to understand written descriptions (articles, application notes, textbooks) of DSP methods used in practice.

To register, please contact Besser Associates at 650-949-3300.
For additional course offerings, please call Besser Associates
or visit http://www.bessercourse.com/

D. COURSE OUTLINE

____

DAY 1

DISCRETE SEQUENCES AND SYSTEMS

* Discrete Sequences, Their Notation, and Representation
* Signal Amplitude, Magnitude, Power Definitions
* Signal Processing Operational Symbols

PERIODIC SAMPLING

* Periodic Sampling and Aliasing
* Sampling Low-Pass Signals
* Sampling Bandpass Signals
* Spectral Inversion in Bandpass Sampling

THE DISCRETE FOURIER TRANSFORM

* Understanding the DFT Equation
* DFT Properties
* DFT Results Interpretation
* Shifting Theorem
* Inverse DFT
* DFT Leakage
* Use of Signal data Windows
* DFT Resolution and Zero Padding
* DFT Processing Gain

DAY 2

THE FAST FOURIER TRANSFORM

* Relationship of the FFT to the DFT
* FFT Input/Output Indexing Bit Reversal
* Guidance On Using FFTs With Real-World Signals
* Averaging Multiple FFTs

FINITE IMPULSE RESPONSE DIGITAL FILTERS
* An Introduction to Finite Impulse Response Filters
* Convolution In FIR Filters
* FIR Filter Analysis and Design Examples
* Phase Response of FIR Filters (Group Delay)
* Half-Band FIR Filters
* Brief Introduction to Matched Filters
* FIR Comb Filters

DAY 3
INFINITE IMPULSE RESPONSE DIGITAL FILTERS
* An Introduction to Infinite Impulse Response Filters
* The Laplace Transform
* The z-Transform
* IIR Filter Design and Analysis Methods
* Pitfalls in Building IIR Digital Filters
* Cascade and Parallel Combinations of Digital Filters
* Comparison of IIR and FIR Filters

ADVANCED SAMPLING TECHNIQUES
* Quadrature Signals and Quadrature Sampling
* Quadrature Sampling With Digital Mixing
* Digital Resampling (Sample Rate Change)
* Decimation
* Interpolation
* Decimation and Interpolation in Combination

E. WHAT THE COURSE DOES NOT COVER:
The DSP Made Simple Course does not cover the hardware architecture of commercial programmable DSP integrated circuits. Likewise, while the course introduces the topic of commercially available DSP design software packages, no computer programming is performed as part of the course.

F. COURSE HANDOUT MATERIAL
The training material comprises 475 pages of class handouts. With the typical lecturer, the student must decide between taking notes, or paying attention to what the lecturer is saying. The training handout solves this "note-taking" dilemma. The DSP Made Simple training material provides a "bulletized" description of each DSP topic in addition to an abundance of diagrams. A textual description summarizing the key DSP concepts are included at the bottom of each handout page.

The highly praised DSP textbook, "Understanding Digital Signal Processing, 2/E" (Prentice Hall Publishing) will be supplied to each student. This book has been Amazon.com's top-selling DSP book for over five years.

G. COURSE LECTURER:

RICHARD LYONS is a Consulting Systems Engineer and lecturer with Besser Associates in Mt. View, CA. He has been the Lead Hardware Engineer for numerous large signal processing systems for both the National Security Agency (NSA) and TRW Inc. An experienced lecturer, and instructor at the University of California Santa Cruz Extension, Richard has delivered signal processing seminars and training courses throughout the US and Europe. As an Associate Editor for the IEEE Signal Processing Magazine, he created and edits the magazine's "DSP Tips & Tricks" column. He has written numerous articles on DSP topics, and authored the best selling textbook "Understanding Digital Signal Processing 2/E" (Prentice-Hall, 2004). Richard is a member of the IEEE, and Eta Kappa Nu the electrical engineering honor society. He can be contacted at: R.Lyons@ieee.org.

H. WHAT'S GOOD ABOUT THE COURSE

* Instead of overwhelming the student with complex mathematics, the lecturer uses intuitive explanations and well-chosen examples to develop a fundamental understanding of DSP theory. (A recipe for technical material that's too rich in equations is hard for the beginner to digest.)

* The practical aspects of signal processing techniques are stressed as opposed to mathematically rigorous discussions of discrete system theory. THIS COURSE TEACHES THE STUDENTS HOW TO USE DSP IN THEIR WORK.

* Comprehensive in scope, and gentle in approach, the course gives the student a thorough grasp of the basics and the ability to move on to more sophisticated DSP concepts and applications.

* In addition to covering the key practical aspects of DSP, a collection of tricks-of-the-trade used by DSP professionals, to make their processing more efficient, are introduced throughout the course.

* In terms of DSP training, this course is the beginner's best opportunity to efficiently and thoroughly learn the fundamentals of DSP.

I. QUOTES FROM RECENT STUDENTS:

> "Excellent course for engineers wanting to get (an) insight into DSP."
>
> - George Hughes, Lockheed Martin

"Instructor takes a traditionally difficult subject to learn,
and made it easy. His printed material is excellent."
- William Schnable, Lucent Technologies

"I appreciated the instructor's ability to communicate complex
subjects in a simple format. This course is in my top 3 of
'Best Ever' (in 20 years)."
- Brian Kralicek, Nokia

"Lyons presents a very solid engineering perspective of the
subject with a minimal, yet sufficient, amount of math."
- Gene Kozin, Itron Inc.

"... great instructor. I now understand what the college
professors were trying to teach."
- Simon Sirin, U.S. Dept. of Energy

"This course takes the mystery out of DSP. Instructor has
a knack for presenting information in a way that is very
logical and easy to understand."
- Dale Laing, Lockheed Martin

"Lyons' is an excellent communicator of highly technical
material. He uses plenty of real examples to translate
theory to something of utility."
- David Day, Day Test and Measurement Inc.

To register for the class, please contact Besser Associates at 650-949-3300. For additional course offerings, call Besser Associates or visit http://www.bessercourse.com/ to view our public course catalog and current schedule.

Mariners,

Effective June 20, 2006 at 2242 UTC the Honolulu radiofax broadcast schedule will be significantly modified to accommodate new 24, 48 and 72 hour wind/wave and surface charts and other enhancements, as well as the addition of existing charts produced by the Ocean Prediction Center and Tropical Prediction Center. The new broadcast schedule will be broadcast on-air beginning June 06, 2006. On June 20, 2006 the broadcast time of the on-air broadcast schedule will be shifted from 1045 and 2018 UTC to 0100 and 1300 UTC. See the following link for details:

Hi Ken

I can't help you with your problem, but I can send you the schematic for
the 1278B.
Just send an email to me at...
markrolandsmith@sbcglobal.net
I'll then scan it in and email it to you.

73s

Mark

Hi,

I bought a Nikon S5 camera in Asia, unfortunately the CD came with only
Japanese driver and Picture Perfect software.
How can I manage to find the right driver and software in English? The
American website will not allow me to download the software from its server
because it is considered "grey market" merchandise.

Thanks first for your sharing the info.

hi ham radiogroups, im after the internal power  control or alc inside of a
icom725 hf transceiver the radio is doing way to much power for the power
supply, it currently is doing 150 watts it needs to be turned back down to
around 100 watts .thanks in advance david from nsw australia .

=================================
If the current RF power output itself is not a problem ,but the max current which can be supplied by the power supply unit (presumably 13.8V) I would suggest to put a sealed (car) battery in parallel.

The quoted 150W RF power is highly likely PEP ,so when operating SSB the average current consumption is possibly half the peak current or less even with some speech compression .
The battery will happily supply some of the current during peak demand.

Since the battery is permanently 'on the charger ' being in parallel with the power supply unit , you don't need a deep cycle battery ; a cheap and cheerful 40 -60Ah sealed car battery will do the job well.
It is essential to put a 25-30 A fuse in series with the battery .

Note : I recommend anybody to use a (sealed) battery and a low power PSU to feed a transceiver requiring (13.5 -13.8 V-DC) external power.
During rx periods the PSU output could be (automatically) disconnected .

Receiving on battery power alone is often beneficial eg less noise and mains borne interference. Although the low impedance of the battery will cause it to 'kill' most external mains borne interference already.

A local ham uses a FT857 with a 110Ah sealed battery, without a mains fed PSU . When not operating the battery is connected to an automatic car battery charger ,which is only disconnected during operation.

Frank   GM0CSZ / KN6WH

Go to
http://www.icom.co.jp/world/support/index.htm

click on 'Manuals,' agree to the license, scroll down to 'Amateur,'
download the manual for the IC-725, look at page 31 (34 in the Acrobat
window).

I think you may be interested in 'R210' for the 100W power adjust.

Watch the current, 73!

hey just started utility monitoring, and managed to decode pactor II,
basically all i got was a list of what seemed to be logon ID's

any one have any idea why? or how pactor actually works?

cheers

This SMD Oven Controller (SMDOC-01) is designed to use with a toaster oven. It provide a low cost solution for making SMD prototypes and samples. The temperature profile is similar to the expensive industrial SMD oven provided. So, the sample quality is as good as the industrial oven can do. It is capable for packages including 0402, BGA, QFP, SOP, SSOP, TSSOP, SOT, etc. It is an indispensable tool for R&D and making samples. It is very suitable for electronic companies, laboratories, universities and hobbyists. SMD Oven Controller (SMDOC-01) is only US$206, including oven (PCB size is large up to 19 x 17cm) is US$283. Voltage 220V, 8A fused.

Features:
1.Small, low price, performance comparable to expensive industrial SMD oven.
2.Capable for any SMD packages. An indispensable tool for R&D, sample making and small batch production.
3.No hand soldering. No painful. No difficult. Save time.
4.Connectable to PC via RS232 for profile setup and temperature monitor. It can also operate independently without PC.
5.Simple to use. LEDs indication for each stage of pre-heat, soak, reflow and cooling. Alarm and power cut off after finished.

Product information : http://www.auto-system.com
Please send me email : erica@auto-system.com for any inquiry or order.

Apologies for simply materialising on here in 'begging' mode, but does anyone know where I can get a copy of NetLink 2.4.3/2.5 and a copy of Dial_Up.txt (Windows '95 DUN details) for the above, please?

Happy New Year (when it arrives)

73,

Angus Graham, G3TXL

I have an PK-232M TNC with Firmware Ver. 01.Aug 91. I was wondering if I could install firmware from a PK-232DSP? A friend of mine upgraded his firmware in his PK-232DSP and gave me his old ones to try. Will this damage the TNC? If this doesn't work what is the latest version firmware I can install without having to upgrade to a DSP unit? Thanks.

Bill

REALLY late but for the record here is a list of FreeBSD ham software I
compiled.

APRSPoint 2.2 is released. New features include,

1. Added TNC data view and TNC data log,
2. Enabled auto connect for AGW packet engine,
3. Fixed a bug handling weather station data,
4. Ability to load a default map view at startup,
5. Restore TNC settings when program exits.

and many more. The holiday sale is also extended for 2 more days.
Visist http://www.aprspoint.com for details. Thanks.

I had to hunt this info down somewhere in the faq page:
"Aprspoint runs on Windows XP, 2000, NT (with service pack 6), 98 and Me"

So why do people think that everyone uses Microsoft. Next time, I suggest
you add the OS requirements when you advertise your software on usenet.

Mike

It's *nice* to see another sucker join the bottom of the pyramid scheme.
I wonder when the structure will collapse . . . .

Tom the Canuck.

Tom, realize that many newsgroup readers are so young that they are not
familiar with the Ponzi scam. Otherwise they would not buy programs
that perpetuate the scheme (or scam).

Now this is not a scam, simply send $1.00 from your paypal to
w4jle@w4jle.com. I won't do anything for you, you will get nothing in
return, and if I get enough suckers to bite I will go to OUTBACK Steak House
and enjoy a meal on you.

At least you know this won't cost more than a dollar, you need not worry
about getting screwed, I have already told you up front you are. So get your
guarenteed low cost screw job today!

Sounds like a scam to me! What if I send you a dollar and insist on
medium rare and the next guy who sends a dollar wants well-done? Are
you going to decide? Will you be sending our money back?
Sorry, I see this as only leading to problems. I'm not falling for it.

   Most young people, after paying social security taxes for a few years,
and listening to the news, ARE familiar with a Ponzi scheme. (or scam)
              Mike

 You seniors!  ya had 40 years to save yer money, an now
you want the youngsters to pay more so you can get a discount.

                                                    hurumph

I won't live long enough to get back all I paid into social
security plus interest.

HamPoll exists in order to give amateurs a chance to speak for themselves and to provide accurate, reliable polling data on a variety of issues related to the amateur radio service.

You are welcome to browse the polling data we have, but we especially encourage US amateurs visiting here to register with thier callsign and vote in the HamPoll Polling Station.

Whether you come to browse, to discuss or submit new polls, or to tender your vote, be sure to visit regularly as new polls are included from time to time and the poll data changes as more hams participate day to day.

Stop by at: http://www.hampoll.com

Charles Brabham, N5PVL
HamPoll Administrator

amdx, still there are enough of the young guys and girls that are ignorant of the Ponzi type scam and buy these worthless software packages that annoy us all on a daily basis. I'll admit that some old fools also buy into these 'get rich for free' scams, however most of the seniors realize that nothing comes for free.

I simpy look at my junk mail file on Yahoo and pity the poor person that has been misled into buying into one of these scam products (the software, not the scam itself).

Naturally, from my curmogenous viewpoint, anyone that buys into these software scams is so stupid that they require treatment. Those that respond to the canned pratter that their software posts are so brain dead that they are beyond hospitalization and treatment.

Sometimes it is educational to read their patter. For example, on one day I received 5 junk mails sent by five different individuals, with identical text content. Evidently, they were all scammed by the same junk mail software seller!

I must have a perverse mind, because I find that funny.

Curmudgeonly yours,   Harry C.

Same here Cecil.

The young kids don't have a clue about Social Security, because it isn't important to them at their time in life, nor was it for me when I was 25. None of us ever thought that we would live to see 65, hence it was just like income tax, something that you simply had to pay.

The problem is not for us elders, but for the younger people who will hopefully someday reach 65. Today, most of these kids don't realize is that the fault with the Social Security system is not in its basic design, but what I beleve is called SSI that allows anyone regardless of age to claim benefits unser Social Security by claiming some form of disability, even if they have never contributed to the system.

Just as an example, when I went to the Social Security office to claim my earned beneits, I was the only American present in the waiting area containing roughly 30 applicants. Most of these individuals were there seeking SSI benefits, few were American citizens, and most had never paid a dime into the system. This is precisely the problem that Social Security faces.

No wonder Social Security is in trouble. It is comparable to a corporation that pays dividends to people that don't even own stock in the company!

'Nuff said on that subject.

Curmudgeonly yours, Harry C.

 A class on consumerism ("they want to take your money") should be a
required
class in middle school.
 And don't get me started on all the bogus, weight loss products, grow tall
products, second grade teacher developed common cold product, herbs that
will stop diabetes and
heart disease, anti hairloss products, improve your memory, shrink your
prostate, grow penis, cleanse your blood, detoxify your liver, give you more
energy, stop your joint pain, make you more appealing to the opposite sex, ,
improve your eyesight, slow
the ageing process, improve your circulation, make exercise easy, prevent
cancer, make
your skin beautiful, health restoring magnetic shoe inserts, magnetic water
enhancers.
  I think you got me started ;-0
And speaking of curmudgeons, Andy Rooney said
" Happy birthday?--I DON'T THINK SO."
                     Mike, I promise to enjoy my day! Bye

Wow there GBrown,
    Don't blast Harry C. He has a point. Up here in the great white north
    known as Canada, I have seen deadbeats claim Social Insurance.
    They do nothing to contribte to society, they just wait for 'check day'
    to pay the rent, and blow the rest on beer and drugs only to be broke
    in a day or two until the next month*. My taxes go towards paying them.
    Is that right? I think not. Is it the same in the states? If one day I
need to
    do the same, rest assured it will NOT be wasted on beer and drugs. I
    have paid into this for many years. I would just want something back
from
    all the $$$ I had deducted from my pay should I ever need it.
Tom the Canuck.

* Do they eat food? Utilities? I do not know and do not want to..
   What they do for the rest of the month is beyond me.
```

GBrown, the fact that they couldn't speak fluent English may have prejudiced my conclusion. It isn't very clear to me why the Social Security offices need interpreters. After all, anyone who has been in this country sufficiently long to seek Social Security benefits should at least be conversant in English, since that is the language that is spoken here.

When you see many people who appear to be under the age of 30 and cannot speak fluent English seeking SSI benefits, the red flag should go up for everyone. Where is the Green Card? Damn, what was wrong with the Ellis Island immigration procedure, and why did the US eliminate it? At that time your entry into the US was judged on your health, skills, and ability to provide for yourself and your family in the United States. During that era, no one came to the US for a free lunch, unlike today.

Realize that unless we secure our borders and return to the strict immigation policies of circa 1910, the US will become a human dumping ground for misfits from the balance of the world, and constructive citizens will no longer be able to support it and flee to other nations who, for the above reasons, close there borders to other than those that can contribute significantly to their country -- and for good reason.

I am pissed off because some of those "new arrivals" are immediately able to collect larger benefits from Social Security than I who have been paying into the system for more than 50 years! Yet, we wonder why Social Security is about to go bankrup! Dhuh!!!!

Sorry for the curmugenous attitude, but the pot of US money has limitations, and I believe that it should first be utilized for the benefit of US Citizens who have contiribuited to the system for many decades, and not be wasted on on freeloaders who have obviously never made any contribution to the system.

Curmudgeonly yours, Harry C.

Hey John,
    I like your post. Good idea.
    What about those telemarketing companies that sell
    worthless products from Canada to the US?
    There is a telemarketing company in the building where
    I worked. Being a smoker, I got to know a few of the
    frequently replaced telemarketing sales staff.
    The company in question sells a 'directory' of businesses
    in the states. While smoking, I asked one of the sales people
    what the product they were selling was good for. The reply
    was toilet paper. I would tend to agree. I believe there were
    several complaints to the attorney general of a particular state(s)
    and I had a smile on my face when the local police raided their
    place of business. Too bad they were back up and running the
    very next week. How can we stop these assholes? It puts a bad
    name on Canada. I feel ashamed that they can operate freely here.
Tom the Canuck.

Harry, I understand your point, completely. I was getting at the fact that how are we to judge who or who isn't eligible for SSI. I worked all my life and it wont be long before I can step up to the SSI office and sign my forms. I wish there were a way to weed out the imposters but you have to start home. There are people in this country, citizens, that take full advantage of the soft hearted liberals and reap the rewards. I really don't know if there is a good fix to and old problem.

```

Harry C,
    For what it is worth, I stand behind you 100%.
    I hope you do not close your borders to your northern neighbours.
    Read my post just above yours.
Tom the Canuck.

amdx, you posted:

"And speaking of curmudgeons, Andy Rooney said
" Happy birthday?--I DON'T THINK SO."

I must have missed seeing Andy say that, but it's so true that it made my day! Thank You!

I believe that it's somewhere after the age of 60 that the "Golden Years" are said to begin. In reality, the "Golden Years" consist of stays in the hopital where various parts of you are being removed. For recreation you begin to give things that were once precious to you to good friends. You worry about gas and electric bills, and tax bills, that essentially double yearly, and you're on a fixed income consisting of Social Security and a pension fund (if you have one). One day you realize that you're nearly 70 and no male member of your family has lived for more than 72 years. You still have a sex drive, but your wife hasn't since menopause. Then you realize your mortality and begin to complentate methods of disposing of your remains that don't present a burden on your family, like donating your body to science. When you go asleep at night, you wonder if you will wake up in the morning, since you hope that when you die it will be painless and in your sleep.

On the positive side, what helps to keep my spirit alive are both my Masonic and fireworks friends who both inspire me to accomplishments and dreams, as minimal as they may be. The computer helps a great deal, because the Internet has become what I had imagined 40 years ago -- a vast source of information.

Then too, I have again pontificated far too much, and if you are approaching the, welcome to the Golden Years! :-)

Harry C.

Harry,
I agree with you. The waves of human parasites flowing into this once great
country are drowning our economy.
SEE
Life Long Welfare for Soon to be Citizens
http://www.islam-online.net/English/News/2004-07/24/article04.shtml

Another situation that comes to mind was the "Lost Boys" from the Sudan. The
US flew them over here paid for their housing and all other expenses.
I am not against charity but charity begins at home. We have homeless,
jobless, disabled Vets, etc.. that are not taken care of. Why the hell
should we as a country bring or allow to enter foreigners that only desire
to leach off what little fat is left of our land.
May God bless the U.S.A.
Ace - WH2T

> Kill yourself?
>

<snip>

Why kill yourself when you can stay alive and fight this crap.
No need to resort to physical violence (I don't like the idea)
but instead use our intelligence to fight back.

Why not swamp the offender's inbox with e-mails.

SUBJECT: "How to make a million dollars easily from your home"

INSTRUCTIONS (body text):
Send me $2.00 by mail and I will send you complete instructions to be rich quickly.
Please include a stamped self-addressed envelope.

(IMPORTANT: Get a PO Box for the address)

Your snail mail reply:
"WHAT TO SEND TO SUBJECT ON PAPER (they paid for it):"

SNAIL-MAIL SUBJECT:
(use this for your e-mail)
How to make a million dollars easily from your home

What to do to start::
SEND THIS E-MAIL:
Send me $2.00 and I will send you complete instructions to be rich quickly.
Please include a stamped self-addressed envelope.

{Insert your address here}

WHAT TO DO:
Mail the above paper message when you have $2 and envelope.

This can also work if you take out a classified ad in a local news paper.
There should be at least 1,000,000 morons in a large metropolis. Just send the
same info but change it to say 'take out a classified ad'.

Why not sell 'solar powered cloths dryers' for $50.
Ship the sucker a cloths line. Technically you are not
in the wrong. It is 'solar powered' after all, unless it is
a cloudy day.

Give back some crap to the target who has been cross posting to various NG.
I was amazed to learn I posted to rec.radio.amateur.* groups. Your replies were
there as well. I may check them out, it has been a long time since I made an FM
transmitter.

===
{back to pyro for a moment}

Just a thought, I know about the electric firing panel for pyro displays.
Lots of wires and switches. Is there any need for an RF ignition system?
It could cost a few more $$$ but you eliminate the long run of wires from

```
the
panel to the pyro items you want to ignite. A secure comm protocol would
prevent ignition by 'outside' sources. A laptop could be added to control
the
timing of events.to be fired.  A simple User Interface to make it moron
proof.
What do you guys think? Just looking for ideas. Start another thread if you
like the idea. We can discuss details. I have made embedded systems for
about
the last 20 years. This idea is possible.
======================================================

Sorry, feeling a bit malicious tonight, (===pyro thought not included===)
Tom the Canuck.

P.S. $2 will NOT work in Canada.
        We have those $1 and $2 coins to deal with.
        (Maybe up the cost to $5 CDN)
        $50 should work out just fine.

Mr. GBrown,
In a sense I do not care what creed, colour, or nationality a person comes from.
We are all human and live on this tiny blue marble called Earth.
{yes there are assholes in every group, even yours, ignore them, I do}
Let us judge by what a person does, not where they come from. Does it matter?
If you contribute to our "society" (needs improvement) they are fine, if they live off
the labours of others I object. Perhaps we should adopt the thinking that we are all
one people on this planet. Are you going to blast me because my parents came from
Estonia? (If you don't know where it is, look it up)
Ignorance and prejudice are rampant on our planet. Can we not do better?
What about your "equality and liberty for all" in your constitution? Did that include
owning slaves from Africa? Open your eyes, see the world for what it is, embrace
other ideas from other cultures and learn from them. Tunnel vision is a downfall for
the existence of mankind.
This is what I think, you may thing otherwise. I can not stop you from

```
thinking the
    way that you do, you can not stop me from thinking my way.
Tom the Canuck.

I recently got pointed to CML Microcircuits website (www.cmlmicro.com), and was amazed to see so many narrowband wireless chips, many of which included "amateur" as one of their applications.

The CMX882 part looks especially tasty since it not only had a 1200/2400 AFSK modem built in, it also had framing, CRC, and FORWARD ERROR CORRECTION built in!

Another, slicker part (CMX7031) not only does that but is, in fact, everything a VHF/UHF wireless modem is except for the RF/IF amps, RX/TX switching, and mixing, with two identical, independent synthesizer PLLs.

I've requested two samples of the CMX882 part, and I'm hoping they'll take me seriously. I can spend a day doing some uC coding and I'll get those puppies RUNNING. I would love to test AFSK packet on a noisy channel with interleaved FEC.

I always answer them really loud, then I tell them to hold on while I get my hearing aid. Wait about 5 minutes and say hello again really loud. If they are still there tell them the batteries are dead and to hold while you get new batteries. Wait 5 more minutes and once again loud hello, if they are still there cuss and say you got the wrong batteries and their not working...

You get the idea, totally frustrate them. I have never had one wait beyond the initial getting the hearing aid.

Sometimes I let them get all the way through their spiel, then I tell them that it really sounds great and that if I ever get well enough to go back to work, I might be able to buy it It really pisses them off. ;-) Other times I just tell them right away that I am 100% disabled, and in too much pain to put up with them. Of course, being on the national "Do not call list" stopped almost all of those irritating calls. The only problem I have is some deadbeat is, or has given out my phone number when they bought crap on credit. I keep a list of these calls and if I get a second call from a company I scream at them while demanding that they leave me alone, or I will have a lawyer on their ass for trying to collect someone else's debt from me.

The only ones too stupid to listen was "Countrywide" which was some kind of mortgage or lending company who had someone different call each time, from different phone numbers. They finally left a message on my answering machine with an "800" number stating that it was an emergency, but didn't identify themselves. It was their headquarters, and I really tore into them, informing them that I had repeatedly told their phone monkeys they had the wrong phone number, that I was a 100% disabled veteran, and that I was not going to put up with even one more phone call. I laughed and told them that if I did get one, that I would call friends at a TV station to have their local office investigated by their news department for violating a lot of different laws, and that I was going to turn over my hand written logs of all of their calls, along with their misleading telephone message. I asked what they thought that would do to their business in the area, just before I hung up my phone. I never heard from them again. :)

If someone is too young to worry about this, it won't be 65, but higher.
If your retirement age is within 5 years, it's already 66.

I don't know the ratio of SS to SSI, but it's all the original ponzi scheme.

Just as Curmudgeonly yours, Steve, K,9.D;C'I

Digressing even further...telemarketers...

One evening when Wife was out doing schooling, a telemarkerter called. I knew by the blank beginning while the computer connected the next operator.

Tele: "Is Mrs N. Home?"

Me: (somewhat grufly) "She's not here."

Tele: "Is Mr. N home?"

Me: (More Grufly) "Haven't seen him in three weeks!"

Tele: "Oh, then I'll call back at a more convenient time."

CRACKED me up.

How do I think of this stuff??

So far, 3/4 times I got the septic additive salesman to hang up on me... "Now, After dumping $175 of your powder down the pot, how will I know if the stuff is really working like you say...." The 4th time, I couldn't shake him...even though I finally told him I was only going on to keep him on as long as I could to keep him from bothering as many others. I had to hang up...shucks!

Years ago (Before Caller ID) I had the same heating and air conditioning company call me over 30 times in one week. Nothing worked with this woman. She was insistent that I just HAD to have my central air conditioning "Tuned up", even after I told her repeatedly I didn't have central air, or even a window air conditioner. Finally, I asked her how many incoming phone lines they had, then I told them that if I got one more call from them that I would contact everyone I knew to have them call and pretend to be interested in their repair services or to buy a new system, then give them fake addresses, or just keep the phone lines tied up to prevent real customers from being able to reach them. I was informed by her that it was harassment, but I just laughed and asked how they would know which calls were real, from the others. I asked why I should return the harassment I had received from her all week long. She never called me again.

Social Security is in trouble because when they figured the original numbers, the average person lived to 65, so the government thought they would, more or less, never really have to pay anything significant out.
  That changed due to decent medical science, as most people in this

group (rraa is where I am right now) are more than aware.

Social Security has been busted for more than a couple decades, and none
of the bastards in the Senate or Congress or the Administration have had
the balls to let it just disappear. It is a dinosaur. And please note
I never mentioned a party here, since all are guilty of just covering
their asses just to get through another term.

And, at 52, I am one of the people that's going to lose evceryything that
the government stole from me and gave away in this deal, so don't start
ripping me for not caring.

Hello All,

At Friday 3 februari 2006 will be SUITSAT launched -
from out of the ISS Space Station into space.
In the Space Suit is a a transceiver which send voice
greetings in various languages.
Also SSTV pictures (mode: robot 36) will be send
down to earth.
For those who received the SUISAT signals can
request a special certificate!

Probably you can receive Suit Sat with a simple GP vertical.
Better is an yagi (or trie both to switch).
I hope amateurs will report here how strong they receive
the suitsat signals (and what antenna you have used).

More info you can see on amsat or:
http://pd0rkc.ontwikkel.nl

Please publish this message on websites (unique event!).

73's Cor PD0RKC

I'm trying to rebuild a kernel (2.4.25) for RedHat 9.0 to include
support for AX25.
I have many problems so far like Sound card not working, network not
working,
errors for loading modules etc.
I was wondering whether I can enable AX25 support for the without
having to rebuild
the kernel. Can it be done by only using modules?
Is there a how-to for this?

thanks,

Andreas

Hi Andreas..

Modules generally speaking are part of the kernel build. You need "hooks" in the kernel itself to talk to modules. (AFAIK)

I suggest you get the sources that go with your current kernel and check to see if AX25 has been enabled. For a while there I think only SuSE had it included by default. (Maybe 5 years ago) Have a look at the default .config file for Y/N/M answers. Your distro should have documented what the comfiguration answers were.

Also keep in mind that if you are manually loading modules there maybe dependencies to be satisfied. ie you have to modprobe or insmod something else before another.

Sorry this wasnt kuch help.

Cheers Bob Vk2YQA

```

Hi all,

I'm trying to setup a wireless link between two Linux using ConnexLink 900 MHz serial modems (http://www.aerocomm.com/Devices/link.htm). One side (ali) is a regular PC running Debian Linux testing and the other side (SLUG) is a NSLU2 running N7IPB's OpenSlug mod (http://wetnet.net/).

The AX.25 link seem to work fine, I'm able to communicate between the two sides with "call", but I can't figure out how to pass TCP/IP through the link.

Anyone idea about what's going on?

Here's the relevant (I think) data from both hosts:

```

Thanks a lot and 73,
GFK's

PS: I was able to make the link work with PPP, but PPP requires a full-duplex link. So I had to enable the full-duplex simulation of the modem. This cut the available bandwidth in half. I'm trying to see if AX.25 would perform better since it doesn't require full duplex.

urm -- quite a lot of pennies - but then they are quite some bits of kit
We have been saving for a while now and are in the midst of dotting the eyes
and crossing the t's on the details.

I bought a station about four years ago from that source and I found them to be very helpful when I had to have a defective humidity sensor replaced under warranty. It is not a problem that should occur now as I think there was a defective batch of sensors around at that time.

I would go for a wireless model personally as they are more flexible in operation and the reception range has been improved in the latest model. I would also go for a USB logger connection unless your PC is old and does not have a USB interface.

Alan

If you're looking to spend around �150, you can get the WS2300, which has a serial port pc connection. It measures all the normal weather variables, and has indoor sensors for temp and humidity. It comes with software so current conditions can be sent to your site. Theres an example of it at my site www.dudleyweather.pwp.blueyonder.co.uk

This is the model
http://www.skyview.co.uk/skybrowse?q=p;p=406&session=DA850F726F9B02AFE1ED80C29238FD75

Hope that helps

Mike

Why USB? Mine has a serial interface, and since I don't use the serial port
for anything else, it's not a problem. I also imagine that it's easier for
amateurs to reverse-engineer serial protocols than it is for USB protocols.
Not a direct advantage if you're not a developer, but it may help if you
want to use free/open source software to access your station (as I do)

OK I never tried reverse-engineering a USB protocol so I don't know.

It's difficult to be definitive about serial vs USB. Obviously some modern PCs don't have a traditional serial port and so can't acccept a serial logger, at least not without using an external serial-to-USB converter.

However, USB has at least 3 minor drawbacks:

1. While the great majority of users of USB loggers have no problems, overall USB just doesn't seem as robust as RS232 and a small % of users have difficulties maintaining a reliable connection. Maybe it's because it's a shared protocol, where other devices or their drivers can interfere. Maybe it's a function of the variety of USB chipsets and their implementation. But it is occasionally an issue with USB which virtually never happens with RS232.

2. RS232 cables can be easily extended to 15m (and beyond). For reliable operation, USB is limited to ca 5m without special repeaters.

3. Traditional RS232 is a well-established protocol and there are readily available fixes to cure eg ground loop problems, tunnel the RS232 data across ethernet LANs and so on. While such solutions are starting to appear for USB, they can still often be specialist and more costly in practice.

In a typical data logging application where data rates are determined by the internal design of the logger not the interface type, USB will often no faster than RS232 and so typically USB speed isn't an advantage.

The reason I suggested USB is than the traditional serial port is becoming obsolete, my recently acquired laptop is all USB and manufacturers can save money by not including them on desktop machines.

Speed is certainly irrelevant as the data downloads are quite quick using a serial port which is the method I use. Clearly your experience has shown that USB does have drawbacks in reliability terms and that is definitely an important fact.

I would assume that the USB connection is slightly easier to set up as the detection is automatic but to be fair the serial connection is easy to setup as well.

I think you will find that Oregon Scientific and Davis are the two most common weather stations for typical home use. Both are very good. Costco is selling the WMR-968, the one I use, for only $175. I paid over $300 for mine, but I did get the Virtual Weather Station software with it.

I have mine connected to my PC for detailed weather information. All my remote stations are wireless. Besides the usual, I monitor garage temperature, freezer temperature, and ham shack temperature. My software connects to the Internet, and my weather console is available anywhere in the world, as well as APRS data with weather. I also belong to the weather underground. You can see my data there at
http://www.wunderground.com/weatherstation/WXDailyHistory.asp?ID=KAZDEWEY1
If you want to see it on Findu.com go here.
http://www.findu.com/cgi-bin/wxpage.cgi?W6CCD
If you want to see a subset of my weather console on my computer, go here. http://myweb.cableone.net/rhughes/weather/wx.htm Be sure and look at the details on this page.

In short, you can do just about anything you want with the data. Just depends upon how far you want to go. The Oregon Scientific station has worked flawlessly for over two years, even in the hot, Arizona sun.

Certainly and that's obviously a good reason for going the USB route and, if not for a current PC, then it will offer some futureproofing for a new PC whenever it might be bought (though external serial-to-USB adapters will be around for a long time I suspect).

But if you do have a choice of serial or USB ports then serial is still IMO marginally the better choice for reliability and flexibility.

Keep in mind that not all applications work with USB to Serial converters. I see no reason why I would expect a weather station to fall into this category, but many hobbyist/amateur radio applications use the serial port in strange ways, and USB to serial converters require that you use the serial port as it was intended.

But serial ports are fast becoming extinct, especially on laptops. For the best combination of flexibility and ability to continue to use your stuff, look for serial ports on PCs you buy, but don't go buying peripherals that require serial ports. Or if you do, accept the fact that they are likely to be a temporary thing.

Nowadays, viewing peripherals as disposable is probably a reasonable thing to do anyway. Generally these devices also require drivers, and by the time you decide to upgrade your PC or operating system or whatever, the manufacturer will likely have a new model and have lost interest in the one you just bought. So even if you have the interface, you probably won't be able to use the thing anyway. And keeping the old OS isn't a choice, either. Just try to buy a machine that runs Win98OE, let alone Win95. Can't be done. Once Vista hits, machines probably won't support SE or W2K either.

So whether its a weather station or a printer or a scanner, remember that it is probably only for your current computer. You next computer, whenever that happens, might not be able to support that shiny new whatever.

Hmmm ... maybe it's time to upgrade to the biggest, baddest XP machine before Vista comes along and you can't buy a machine to run XP.

Oh, and Linux isn't much of a help, either. Not only is device support STILL weak, but it has the same hardware issues, although not nearly as severe. And it has issues the other way. I can't put Linux on my new laptop yet, even though the model is a year old. Still waiting for the distro that supports the DVD drive.

..

No hesitation in recommending Prodata.
Bad experience with Skyview several years ago, they have not changed by the sound of it!

Yes - I was really commenting in the context of commercially available weather stations, most of which do seem to use serial ports in a standard way and hence can generally accept serial-to-USB external converters without a problem.

>But serial ports are fast becoming extinct, especially on laptops. For the
>best combination of flexibility and ability to continue to use your stuff,
>look for serial ports on PCs you buy, but don't go buying peripherals that

>be a temporary thing.

Fair comment. The problem at present is that - again in the context of AWS systems - USB does not offer quite the same robustness and flexibility as good old RS232. So new users with eg a USB-only laptop end up being unable to implement the best solution.

There is another option, for new USB-only desktops at least, which is to buy an inexpensive expansion card providing one or two standard RS232 ports. Again I suspect that these will be around for some years to come, though you might have to seek out a more specialist PC dealer. (This applies to laptops also but it's physically a more messy solution.)

[Other good points snipped.]

APRSPoint is a complete APRS package with integrated street-level maps.
We are offerring a thanksgiving special. Now you can APRSPoint license
plus MapPoint 2004 for $88.95 instead of $109.95. Please visit
http://www.aprspoint.com/ for details. Thanks.

After much searching and gleaning of details from various on-line docs,
including the AX.25 Howto, I have reached a dead end with an attempt to

find a new use for an old Baycom serial modem. The flavor of Linux is Gentoo 2.6.11 r3

The ultimate goal is to use it with Xastir, which appears to be functioning properly.

The specific problem is with transmitted data. I can issue a CALL or BEACON at the bash prompt and the radio transmits data that sounds like 2400bps packet. I am also monitoring the data from a Windows PC with with a PK-232. Every time that I transmit from the Linux / baycom, DCD is active on the PK-232 and it "sounds" like packet on the scanner, but nothing shows on the terminal on the Windows PC. The monitor level on the PK-232 is set to 6 (highest / most data).
I can change the radio connected to the Windows PC / PK-232 to 144.390 (APRS) and the data streams in like crazy.

I can boot the Linux PC with my old DOS / Baycom boot disk and transmitted data is monitored fine on the Windows / PK-232 PC when I transmit via the Baycom.

The Baycom is receiving fine on the Linux PC. I can fire up Xastir and watch the local APRS activity, no problem.
Here are some of the config details:

AXPORTS

```
# /etc/ax25/axports
#
# The format of this file is:
#
# name callsign speed paclen window description
#
baycom-com2    KD4TWJ-9    1200    250    2     144.390 APRS (1200 bps)
```

```
:ifconfig bcsf1
bcsf1     Link encap:AMPR AX.25  HWaddr KD4TWJ-9
          inet addr:192.168.10.10  Mask:255.255.255.0
          UP RUNNING  MTU:256  Metric:1
          RX packets:0 errors:0 dropped:0 overruns:0 frame:0
          TX packets:67 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:16
          RX bytes:0 (0.0 b)  TX bytes:0 (0.0 b)
          Interrupt:3 Base address:0x2f8
```

```
:sethdlc -i bcsf1 -a
sethdlc: Version 0.5; (C) 1996-1997 by Thomas Sailer HB9JNX/AE4WA
current parameters: TX delay 300ms, TX tail 300ms, slottime 100ms,
p-persistence  40/256, Half duplex
```

```
:sethdlc -i bcsf1 -p
sethdlc: Version 0.5; (C) 1996-1997 by Thomas Sailer HB9JNX/AE4WA
driver name: baycom_ser_fdx
current parameters: mode ser12* io 0x2f8 irq 3
```

If I use "Listen -a -h -p baycom-com2" while using Call in another term, here is what I see;

```
baycom-com2: fm KD4TWJ-9 to KD4TWJ-1 ctl SABM+
baycom-com2: fm KD4TWJ-9 to KD4TWJ-1 ctl SABM+
baycom-com2: fm KD4TWJ-9 to KD4TWJ-1 ctl DISC+
```

I am cancelling Call after the second attemp, that is why DISC is the third entry.
This looks like the right stuff.
It is as if the packets are empty by the time that they reach the radio for transmission.
Any ideas?

Thanks

Dean

Hi Dean

I assume you mean "sounds like 1200bps packet" rather than 2400?

I doubt this is relevant but I had some issues with using the serial port for PTT under soundmodem. Ended up running setserial and turning the serial port "off" before use. (ie "uart none") I'd think though that baycom mode would be simply a "synchronous" form of transmitting to/from a standard serial port and wouldnt need to be turned off this way..

Since the whole thing should be synchronous at 1200bps I'd start looking for any inter bit delays that may be being introduced. This I think would be more commonly a RX rather than TX problem. I remember having an older kernel that didnt recognise the 16650 UART properly and defaulted to something without either a RX or TX buffer. Perhaps some playing with setserial will help (defining the UART type also defines whether it uses buffering. I think the kernel module allows you to change the buffer size but I havent checked this)

You may also be able to capture the audio with your soundcard and make some hard comparisons with a spec-an etc to determine where it falls down.

If you think it may be linux version/kernel dependent try the Knoppix boot CD. I think there is also a ham radio version if AX25 support isnt in the original

Apologies for not being more helpful

Cheers Bob W5/VK2YQA

Each TNX and softwre package has its own particular settings even though in ax25 protocol. My only answer is to give you my settings used with VHF only and software called Digicom.

Name	Setting
HBAUD	1200
PACLEN	255 (blks)
TXD	(anywhere between 10 and 60)
Monitor	MBEQHI
MAXFRAMES	7 (means if sigs good gives fastest throughput)

Joe

FRIEND,

Hi! Check out www.ChezBrandon.com ; it's awesome. As are you, Brandon is very intelligent, knowledgeable, and good. May you have an awesome day.

A Succinct Warning: Elements of the Mossad, sated with cash from the murderous and destructive narcotics trade, are using some medical, pharmacy, and food service workers to murder men, women, and children. (A certain tasteless acid, for instance, causes cancer.)

Victor Ostrovsky's books BY WAY OF DECEPTION and THE OTHER SIDE OF DECEPTION: A ROGUE AGENT EXPOSES THE MOSSAD'S SECRET AGENDA offers elucidation, as does James Ennes, Jr.'s ASSAULT ON THE LIBERTY.

Again, may you have an awesome day, and check out www.reopen911.org and
www.ChezBrandon.com

>

Yep, doing that. I chose to load everything as modules, instead of the kernel, so the first command in my script is "setserial /dev/ttyS1 uart none". The Baycom driver is unhappy if it does not have the UART, so this is pretty much required.

> Since the whole thing should be synchronous at 1200bps I'd start looking

dmesg output indicates that the UART is recognized as a 16550 and that ttyS1 is set to 1200bps when baycom_ser_fdx is loaded.

Just an extra thought or two Dean

Have you tried setting up soundmodem or a vanilla TNC with the same box?
Thinking in terms of checking that AX25 is working in the kernel properly.

And grabbing at straws.....

I wonder if "baycom-com2" can be a real valid port name. Mine have
always been real short names like "radio".

Is 300ms long enough TXD for your TX?

Is the PK232 DCD only based on audio present (unsquelched) or has it detected a valid set of tones? (ie soft DCD)

And rather than using "call" also try and ping a box in the interface subnet and monitoring the activity on the other PC (say 192.168.10.11). I can never remember whether connect mode (ie "call") runs on top of the IP interface or at a layer beneath...

I also copy/pasted this from the baycom website;

During the last three months we have been reported some problems with RS-232 cards using the fast 16550 chips with internal FIFO instead of the "traditional" 8250 chip. There seems to be a number of 16550 versions (not all of them!) which do not support the internal 6 bit mode of the RS-232 we use for clock and baudrate generation in the BayCom terminal. This mode is rarely needed for other applications and it looks like chip designers have not implemented it on these chips.
As a consequence, BayCom will not run on these PCs. Unfortunately, there is no easy workaround, so we could not solve this problem yet. We will try to fix it with the next version.
If you run into trouble, buy a simple 8250 card for < 10 US$ and put it into your PC as COM3/COM4 and configure BayCom on it. Make sure, that addresses AND interrupts are set properly as configured in the INSTALL program.

We would have some interest to know, which of the 16550 do not run. Currently, National Semiconductors are the only one's known to us. If you have a trouble making card, please mail the name of the manufacturer of the card and of the 16550 chip on the card to baycom@baycom.org.

Have you tried telling setserial uart 8250?

Tom Sailer has answered a few queries of mine directly so that may be another avenue. His personal website and email contact are on the baycom website.

Last time I was running packet I actually used the soundmodem suite. Almost got all fired up using Q15X25... (2500bps)

Cheers Bob VK2YQA

I am starting to wonder about the kernel also. I was not able to get Harv's Knoppix to load properly on this Notebook, but I was able to get AFU Knoppix (2.4 kernel) to load. It all worked fine, the Windows / PK-232 decoded the packets perfectly. I knew that the UART worked fine when booted with DOS and this now leads me to think that it is OK with Linux AX.25. I used baycom-com2 as the port name and also 300ms was plenty for the TX Delay.

> Is the PK232 DCD only based on audio present (unsquelched) or has it
> detected a valid set of tones? (ie soft DCD)

It is just audio present, nothing fancy.

> And rather than using "call" also try and ping a box in the interface

Tried that also. Same result, sounds like packet, but nothing usable
on Windows / PK-232 terminal.

> Have you tried telling setserial uart 8250?

Yes, however the Baycom module needs control of the UART, so this will
not fly. You can still load the module, but the network interface will
not come up, since it sees a conflict with the serial module. Seems
strange until you see how the baycom module works.

I will have to try making a new Harv's Knoppix CD and see if that will
load OK. I am starting to wonder about Baycom with 2.6 kernels.

Thanks

Dean KD4TWJ

Minor update -
I created a new Harv's Knoppix CD (2.6.11 kernel) and it exhibited the same problem. I then remembered that the AFU version of Knoppix would load 2.6 (2.6.9) as well as the default 2.4 kernel. Once again, same problem exhibited with the AFU version and the 2.6 kernel.

Next, I tried the same thing on a Desktop PC. First AFU Knoppix with 2.4 kernel, the baycom worked perfectly. Then both AFU and Harv's with 2.6 kernel, same Tx problem with each one.

I may try upgrading the Notebook PC to 2.6.14 as soon as time permits. Hopefully that will make a difference.

Also, when I posted the message here originally, I had not been thinking in terms of a kernel problem, I was thinking that I was mis-configuring something. I have since done some Usenet searching specific to Baycom serial / 2.6 kernel and it appears that others are having the same problems.

Hi, Im thinking of starting out in amateur radio, and have heard rumours that Orfordness is putting out a lot of DRM signal during the day. How far inland can it be picked up? Also, would it actually have any effect/be of consequence? Im guessing unless i have a decoder itll just be a really noisy lump. I think its at 1296kHz but im not sure.
thanks,

Tim

Is there any digital ham software with user-defined modes? Like custom
digital modes? For example, let's say I want to use (or use a modified
version of) Mil-Std-188 (i.e. G-tor). Is there any software that will
let me add a digital mode and define it at the bit level?

Thanks,
Dave

Hi Dave

Well you can always go into the source code of GPL etc software and modify it for yourself....

Just a thought (not what you wanted to hear - sorry!)

I recently got one of these units along with the matching anemometer. Is there any software out there that will allow me to get it to talk to the outside world or broadcast WX messages on APRS? It seems a pity to let it go to waste.

Thanks,
--
Nick B.

802.11b and 802.11g WiFi networking equipment operates at a range of frequencies from 2.412 GHz to 2.462 GHz. There's a ham band at 2390 to 2450, and it looks like there's some overlap here. Usually wifi software asks what country you're in, USA allows WiFi channels 1 to 11, and Europe 1 to 13, Japan allows only channel 14. Seems that some (most?!) wifi channels are in the ham band, so, with a little more power, we could do high speed packet as hams with wifi cards. Make your node name your callsign.

This even vaguely make sense?

Channel 6, other options as well.
No software ... it's just WiFi ... hook it up, it works.
Want more range, add bigger antenna.
I use my own software to link the tcp/ip stuff into
the traditional packet / BBS network.
Couple dozen of us locally using that software.
Think of the WiFi links just like you would think
of an ethernet cable ... hooks anything to anything.

Channels 1 through 6 fall completely within the U.S. ham band. Since they overlap, channels 1 and 6 are the only two which will not interfere with each other.

Hello,

Possibly not.
In France we had to subscribe to be allowed in a limited time frame to use
Wifi equipment for Ham appz.

The only problem is that the top of the 13cm band is for Sat downlink...

73 de F8BOE Olivier ...-.-

Just in case anyone is interested.
I finally finished the update to kernel 2.6.14 . I also did a modules update.
And still no joy. Same results.
I have also found a few older messages and vague references in Usenet messages to the data corruption / CRC problems with transmit and Baycom serial modems. It appears the while there is recognition of a problem with packet assembly prior to transmit, nothing seems to have been accomplished to solve the problem. The best that I can tell, the end of the line for the serial baycoms was the 2.4 kernels. I have also seen messages that indicate that there are problems with AX.25 in the 2.4 kernels. Problems that are fixed in the 2.6 kernels.
Unfortunately, I am not in a postion to lend a hand towards resolution of Baycom / kernel 2.6 issues, otherwise I would.
Sadly, I am now loading Win98 on the PC and hope to have Cygwin and Xastir running with the Baycom in a few days. I need it for a trip that I will be taking.
It's a damn shame. A Linux installation is terrible thing to waste.

Well John, I never used a Baycom so cant say much about that.
AX25V2 protocol however is still the established WW protocol
for packet or TNC's of any kind.   I use a C128 and a CBM
type TNC which is half homebru! I still use the V2 protocol
and it works fine with military PBBS systems.   I use it mostly
for MARS traffic.
                Joe/ABM6JF

There were a few 2.4 kernels which had AX.25 problems, but the later ones worked fine for me (with mkiss and a TNC). Likewise, some of the 2.6 kernels had problems with AX.25, but this was fixed in 2.6.14.

The comments in the source code indicate that latest changes to baycom_ser_hdx.c were made in March of 2000, so I doubt it is being seriously maintained at this time. With serial ports on their way out, I suspect that the Baycom modem is fast becoming obsolete. Fortunately, there are now some TNCs with a USB interface available to take their place (e.g., <http://www.elcom.gr>).

Those prices are a joke. - When they get down to twenty bucks or so, I might
try one out... Until then, I'll just stick with soundcard Packet.

If you use MapPoint with either APRSPoint or UI-View, you can update
MapPoint 2004 with the latest map data very inexpensively. All you need
is a copy of Streets 2006 or AutoRoute 2006. Go to
http://www.aprspoint.com/ for step by step instructions.

I don't mean to be flippant here, but should hams care at this point whether the FCC's taken time away from current urgent matters (e.g., potty-mouthed DJs) to rule on any ham SS? I know I'm at the point where I'm ready to start experimenting with SS on a NTI basis, sequences and polynomials be damned.

No link attitude!

http://www.n9zle.com/forum/

What is it with this no-link to other site attitude?
Years ago when the internet was in its infancy just about any site would add your site as a link from theirs. In return you would do the same. But now it has come to NO-LINKS. Not even in the forums. I have had a website located on tripod for about 9 years over those nine years I had a link to qrz dot com That site received over a million hits. And many users went from that

site to qrz and on-to Icomamerica dot com. I have always supported Icom. They have never given a link on their site to mine. I have always supported qrz. But of course he(AA7BQ) never put a link on his site to mine. Well you may say that "I never asked". And that is true. But recently I have noticed he has been deleting my posts. ALL OF THEM. He never contacted me telling me why. AA7BQ just deleted them. I build CIV cables and sell a few of them every week to amateur operators who want them. When I posted one on his site. I found he deleted the post soon after it was placed there.

My beliefs are.
1. QRZ AKA AA7BQ no longer has the amateur radio attitude.
2. AA7BQ has gone fully commercial but calls his site "The Ham Radio Super Site"
3. AA7BQ does not have your best interest in mind.

I can also prove what I am writing here.
For one if he claims he is nothing but a commercial site then why does he ask for donations?
If he is not a commercial site than why will he not allow me to post my CIV cables on his site?

That takes care of number 2
Now for number 1 and 3. If some one knows the truth about something but keeps it from you he is a liar.
No mater how you put it, he is a liar. On the QRZ site Fred is there to help you renew your license. Or so he leads you to believe so. He charges you for it. Mr. Lloyd has never revealed it to any amateurs that you can renew your license or do an address change at the fcc.gov web site for FREE. Yes TOTAL FREE at the FCC web site.
The forms at the FCC web site or no harder to fill out than his.

His CD. He charges 24.95 plus tax and shipping. On that CD is data he obtained from the FCC and got it for FREE, he sales it to you. Also he has software, created by programmers like MYSELF. And MODS that have been made available from the manufactures and other HAMS like ME! I have been contributing to Amateur Radio community for greater than 10 years, and have received very little for software I created. Never complained when it was copied. I have performed and created several of the MODS for various transceivers. Never asked a penny for it. I never commercialized HAM RADIO. And NEVER took money from some one for something they could get FREE else where.

I am sure many of you would like to ask me "what I am going to do about it?" Here is my answer.

I have created an open forum on my web site http://www.n9zle.com/forum/

There you can post a link to your own site even if it is a commercial site. You can post any ham radio equipment you have for sell on the site.

You can do a callsign lookup at my site from the FCC database, not that stupid qrz thing.
I will soon put together an open source database that I will sell for the

price of the CD plus the true cost of shipping. About two bucks total. Once you install the database on your system, you will be able to download updates for FREE. I will make drivers available to programmers to access the database in several different languages and operating systems. I will also attempt to make the database available on the internet for FREE to download.

I only ask for a little help from other HAMS like myself. I need a few elmers that are willing to moderate some of the forums. It is easy and you will find it fun. If you have any suggestions on new forums or sections please logon to my site and make a post.

73s N9ZLE

N9ZLE.COM forum a success!

http://www.n9zle.com/forum

After one day up there is now 8 registered users, and 38 posts. We have had 36 guests come by and take a look at the postings.
This forum is slightly different than most internet forums because of the following.
We are holding to the Amateur Radio ideals and principles.
We have a section for anonymous posts.
You may post a link to your personal or commercial site.
All opinions are appreciated and accepted as long as they are not slanderous or unclean.
There is a callsign lookup at the top of the forum on every page.
We are dedicated to helping our fellow HAM in what ever his/her needs are.
Please stop by and make a suggestion on any additional forums you believe the BBS may need,

73s and 88s N9ZLE

HamPoll is here in order to give amateurs a chance to speak for themselves, and in time to provide reasonably accurate and significant polling data on a variety of issues related to the amateur radio service.

You are welcome to browse the polling data we have, but we especially encourage US amateurs visiting here to register with thier callsign and vote in the HamPoll Polling Station.

Whether you come to browse, to discuss or submit new polls, or to tender your vote, be sure to visit regularly as new polls are included from time to time, and the poll data changes as more hams participate day to day.

Stop by at: http://www.hampoll.com

Howdy Cathryn!

The HF nets are listed in this document, which is updated reasonably often.
Just contact the net manager for the net you'd like to join:
http://www.uspacket.org/hfnets.htm

The 30m ARRL Skipnet, NET147 looks like this right now:
http://www.uspacket.org/images/NET%20147%20BBS.pdf

I'm on NET147 late evenings, overnight and early morning. During the day, I switch over to 17 meters and Q15x25 mode, as the net manager for NET117.

Bunch of new stuff going on right now, and on the near horizon with the digital net. This is a good time to get back into it. Lots of fun!

Hmm, looks like we're kind of in the wilderness here on the west coast.
     I have an okay antenna on 30M but nothing really that good for 17M.

I have been watching wwltv.com and wdsutv.com on the Internet.
I keep hearing about the lack of emergency services to communicate.
Does anyone know if any Amateur Operators are being engaged to assist?

Here is the latest info that I have:

Fred W4JLE DEC SEOC SC

The on-the-ground situation in SE Louisiana and SW Mississippi is as bad as television is reporting. Neither state is permitting disaster relief agencies into the affected areas except on a very limited basis and only then where conditions are stable. Nearly everyone is still staging as close by as possible and waiting.

The Louisiana SM (Mickey Cox K5MC) and SEC (Gary Stratton K5GLS) are in communications with state officials, who have directed them to NOT advertise for volunteers. Some volunteers have been requested, and these are being staged at the state EOC.

The situation for the Mississippi SM and SEC, Malcolm Keown W5XX, in Vicksburg MS is very uncertain. His station is completely on the ground and EchoLink repeaters in the area are off-the-air. Attempts to contact Assistant SMs have been unsuccessful.

An AB2M.net Amateur Radio operator registration web site has been setup and is ready to go public when approval is received. Some Amateur Radio operators are known to be traveling towards the affected areas with emergency services and disaster relief agencies as dedicated communications resources.

Despite everyone's nearly overwhelming desire to help, about all we can do right now is to make preparations for a prompt response when the officials finally give their approval. None of us know when that will occur.

Jerry Reimer, KK5CA
South Texas

The West Gulf ARES Emergency Net remains active (7.285 MHz days/3.873 MHz nights), and radio amateurs not involved in emergency communication have been asked to keep these frequencies clear when the net is in session.
(this is an emergency H&W freq)

A high volume of health-and-welfare requests reportedly is slowing the passage of critical tactical and emergency traffic. The Salvation Army Team Emergency Radio Network (SATERN) on 14.265 MHz has been accepting and handling general health-and-welfare inquiries on the air and via its Web site.

COMPANY OR ORGANIZATION INFORMATION:

Bozak Antenna
8 Timberwick Drive
Clifton Park, NY United States 12065
(518)373-8069
http://www.bozak.org
http://members.tripod.com/~Bozak/HOMEPAGE.HTM

COMPLAINT INFORMATION:

Complaint #: 414840
Complaint Type: Company (other than automobile)
Date Received: 9/12/2001
Primary Complaint Classification: Credit or Billing Disputes
Secondary Complaint Classification: Delivery Issues
Complaint:

To whom it may concern:

Mr. Steve G. Bozak was contacted in mid July 2001 regarding products (eg. antennas and coax cables) which were available for sale from his firm. Mr. Bozak quoted prices and then later changed the quote to reflect higher prices (25% higher) without my authorization. Mr. Bozak concludes that since I gave my credit card info that I agreed in principle with the altered price quote (which I did not agree too).

In addition to the order being 2-3 weeks late
(because his firm did not have
enough coax cable on hand), I then had to follow-
up and specifically request
a copy of the original billing invoice. When the
invoice was finally received
in late August, and after noting the higher
prices charged, I immediately
called and complain to Greg (Bozak's sales rep).
Greg was informed that I
received a lower price quote in mid July. Greg
requested that I forward that
quote which I did. After reviewing, Mr. Bozak
wrote back on September 12,
2001 that "I am sorry for the confusion about the
prices.... every effort
has been made so this does not happen."

Thus, Mr. Bozak concedes that he (and his
organization) screwed up but they
want me to eat the higher costs. This is why this
matter is being forwarded
to your offices for recording and resolution
purposes. Prospective customers
need to know about Bozak's deplorable customer
service/business practices.

rec.radio.amateur.misc:3541

My XYL said she saw/heard Larry King telling people last night that ham
radio could be the best way of getting information to and from the
affected areas.

I have been listening to SATERN on 14.265 handling emergency/H&W traffic.

"Perce"
(aka Alan NV8A)

On 08/31/05 09:48 am laborkei tossed the following ingredients into the
ever-growing pot of cybersoup:

> I have been watching wwltv.com and wdsutv.com on the Internet.
> I keep hearing about the lack of emergency services to communicate.
> Does anyone know if any Amateur Operators are being engaged to assist?

I was able to pass a Emergency message via the SATERN net on 14.265 .  A
station in the area was able to relay it via the Coast Guard.  Ham radio is
alive and well.

There's also a health & welfare net on 3.935 LSB, Louisiana based, I think.

Greg

I am a DEC with ARES and have been told by a number of newer hams that ARES is obsolete in the 21st Century.

It was pointed out to me that echo link, cell phones, wireless internet etc etc. obviated the need for a "bunch of old farts" that couldn't read the handwritting on the wall...

We all watched in amazement as New Orleans was relagated to the Stone Age. All the wizz bang technology fell on it's hind parts. No cell phones, no internet, no echo link, no communications.

No emergency system that relies on intact infrastructure can be relied upon period! Those who fail to heed this lesson, are doomed to repeat it.

Now take it one step further and change the disaster to a nuclear explosion. The EMP wipes out all the rest of the neat toys necessary to communicate in the digital modes.

The SOS and requests for help being transmitted on CW from an old tube type rig go unanswered, as no one can understand code. Mores the pity.

Ah Ha!   But there will be *some* of us still around until of course all us
geezers kick the bucket. Then they' re on their own.

There's a bunch of teen-agers in our local radio club who think that
Morse is "Reel Kewl" because their non-ham friends can't read it.....

Old geezers (like us) never die - we just pass the key to the young
whipper-snappers.

I'm kinda curious how the WL2K net is doing on the
incoming H & W headed toward the Gulf Coast.

I know there are at least 14,000 pending incoming, waiting
until the situation is stable enough to allow for their handling.

What fraction of these will be handled via WL2K?

What a lot of fuss about _NOTHING_ from you Yanks!

What has happened down south is exactly what you have
been meting out to the citizenry of Yugoslavia, of
Afghanistan and latterly of Iraq - the destruction
of the civilain infrastructure.

It's normal Yankland experience!

Serves you right for your illegal invasion of Iraq!

Thanks, you worthless piece of crap. We note your caring attitude for
those in distress. Deep down, all socialists are violent, hate-filled
potential dictators. Oh, and Jerry Hollombe would be surprised at
your screen name. Polymath, indeed. Do you call yourself that
because you can actually count past three?

Yup - it is/was an Axis Of Evil combining together the hypocrisy
of the religious loonies, Bush, Blair and Windsor.

Insofar as they contrived to send many young men to their
deaths, they're not a lot different to the Muslim loonies
directing all these suicidal youngsters.

With all do respect, may I entice you to have an auto-erotic experience.

If we had not helped you during WW2, I would not be reading your trash as I
do not understand German.

Regardless of your politics, to show such utter disregard for the suffering
of the people is indicative of your anti US stance as opposed to your
concern for humanity of any stripe.

But were you not a rabid mouth breather, you would know that.

Your challenge is rather silly and infantile.

Perhaps it is indicative of the malaise that preposseses Yankland when Yankland visits the same style of destruction on the innocent citizenry of the World?

You did not help me during WWII.

I am not showing "utter disregard for the suffering
of the people". Far from it, but your self-obsession
and the self-obsession of Yankland might lead you
to think so.

Eastern Europeans might disagree. US intervention in WWII
enabled the creation of the Soviet Empire along with its
Iron Curtain.

A good point.

WWII was started by Britland with the express purpose
of dispersing the invaders from Poland, and yet the
war ended with invaders in Poland.

Therefore, Britland (and Yankland for all its pompous
posturing) _LOST_ WWII.

Who were NOT British, French, Belgian, Finnish, Irish, Canadian,
Scottish, Aussie, NZlanders, American or German.

If I recall ancient history, ca 1991, Poland is FREE!

> Therefore, Britland (and Yankland for all its pompous
> posturing) _LOST_ WWII.

German's surrended, NOT Brits or Yanks or the members of the above list.

Get your head out of the 'pint' and do REAL history!!

We love you anyway.

Just ignore Plymath!

He is actually Gareth A. Evans, G4SDW of Chippenham, England. He is
obviously retarded in many ways as you can see..

I'm very sorry you folk in the USA have to read his garbage,
particularly in a situation like the hurriucane disaster.

Peter, G3PHO

We or at least "I" don't judge a whole country on the potty mouth of one.
We're still your friends and probably will be for life! It is sometimes hard
to ignore a$$ holes without defending oneself, but that truly is the best
course of conduct. Maybe one day he'll find himself in the midst of some
terrible plight and as he lays there suffering, he'll think back of all his
assinine words.

Hi Guys..

First I want to say.. our Prayers or with those in the south that lost their lives and loved ones and with the survivors of those who lost their lives in hopes they can somehow put together something of what they had and work towards fulfillment of their dreams. Which was severely interrupted by the Hurricane that swept through that region.
I can only say... Not having TV since the 20th of August (lightening Strike and SLOOOW insurance company) has spared me much of the media hyp of the catastrophe... I still stop quite often throughout the day and just want to cry for those who are suffering and continue to suffer this great hardship... Makes one realise just how little we actually have to complain about..

Saw this on our Packet Net.. See **** BELOW>>> Sure was easy to get over HF PACKET.. Not sure where they get their ideas.. But let me tell you a story.. most of you are familiar.
on 8-20-05 our home was hit with lightening, actually it was a direct hit on my 10 meter antennas.. We were all knocked on our butts and we very set back by the experience.. I found after making sure all of us were ok... That Amongst a lot of other damaged devices.. That Most of my HF BBS which I host here at my home (W9OTR and N9LYA) were virtually blown away... However, due to the low costs involved by the ability to use low end PCs and just about

any HF rig and the fact that TNC's are a dime a dozen.. I was able to get 3 out of 5 HF ports back in operation the same day, in fact within an hour the first one was back on line the second within 3 hours. . The Third before night fall, and 4th took a bit longer and VHF was up and down over the next few days.. Today 9-2-05 the station is 100% again.. however I consolidated W9OTR and N9LYA into one BBS. for now. It has 4 HF 2 VHF and 1 UHF ports all originally built on the low end of the cost equation. And all replaced out of spare parts that I had on hand and had accumulated on the used markets mostly via eBay.. Except for one radio my Icom2100H which I bought new on EBay at an extreme discount. I personally fund all radio activity here at home for the HARDS group.. and we work together to help one another out.. I had many offers of equipment form those in our grup that I am convinced that even with 100% loss I could have been back on line as fast as equipemnt could have been delivered. I was not the first in our group to take a lightening hit.. WB3DTG took a big hit a week or two before me and had his staion partially back on air within days/ I am now forwarding with him on two ports again.. Not sure of his status today, as far as anything new.. But he is coming in here real well on HF. And is actively masking repairs. I reaallyu doubt too many would have the funds to replace P4 boxes and SCS Pactor III Modems prior to an insurance payout. Thus why I only use low end equipment that works great with Packet and allows me to share messages and traffic with those who run Packet/Pactor systems like wb3dtg. Do not get me wrong... I have and plan to continue to experiement with the faters modes.. But my system will always be based on HF Packet ....Read on.

I challenge anyone to take a modern high speed data system and expand it into a multiported HF BBS (message handling system) which must be run on high end PC's with Highend HF gear. As well as a lot of the proprietary modes that require high priced Controllers ... To build and sustain a system for years. And then suffer a third of the damage I suffered and rebuild it without taking out a mortgage on your home... I spent all of $200 to get back to 100% And was at 80% same day within hours of strike.. even though the wife and I had both been hit by the EMP of the lightening.. This would have rendered most system off air for the wait for Insurance and new parts to be ordered and delivered.. Not so with Packet.. it is viable and can be had by most hams on a budget... To Ban HF Packet one might as well BAN CW.. It won't happen.. It can't happen.. Or the Systems in place will be too fragile at best..
I am not saying the New modes are not good most are... PSK31 Q15X25 Pactor I Are all good..
These augment our national and worldwide network infrastructure...But they cannot and will never replace Packet without cutting out a majority of Hams who operate their stations for personal as well as Volunteer reasons for emcomms and the general communications of hams on their OWN worldwide network.. As they will be under budget to setup and maintain a system that can be both robust and efficient as well as easily replaced within hours...

I believe the IARU Region I DV05-C4-14 author is not knowledgeable in this area and has no clue what packet can and does do .... I invite him to please consider talking with us and letting us explain and by example show him that Packet Radio is the Root means of the worldwide HF Digital Network. And without it the Ham Community will be seriously cutting back on its resources...

Let us explain and show why his statements about propagation and QRM are false and those opinions of the misinformed. Packet radio has been and always ignored by the ARRL as well and all their marbles were put in to the TOR modes.. For the ARRL to only end up with not... And yet the Packet Network has suffered but yet sustained itself by those hams who dedicate themselves to building and maintaining the Worldwide Network.

Example.. Our system today and prior to and during the Hurricane that Hit the Gulf Coast were directly linked to a number of Packet Stations at Emergency Locations.. Example is New Orleans W5OEP Station in the New Orleans Emergency Radio Club Stationed at their Emergency Shelter.. With Beams and other types of antennas on the roof of several tall buildings, and Battery Backups.. The stations have run throughout the emergency linked to our Packet Network via several bands and frequencies. This is due to the inherent low costs of such systems.. take the typical Winlink PMBO.. Avg $5000. For radios proprietary controllers, software Internet connections etc... we can do the same with packet for considerably less.. Lets see.. no internet needed, HAMS use Radios. A ts 520 can be had for $100 on eBay xtled for $20 and an homemade inverted V can be made for less tem $40 a KAM TNC Used at EBay for $75 and a PC IBM XT class or better FREE MSYS Software and you have an HF Packet Station... It can had additional equipment for multiport Multi BBS system and national hubs.. Or you can just have a casual user station... I do not see the logic in cutting ones head off in spite of their face.. If you do not like Packet you do not have to use it..If you strictly want to use a Faster Newer mode and have the funds to do so .. Fine.. Add a Packet port and work with us not against us... There are times here when with my many HF ports messages are being sent in and out at a high rate of speed... Over several bands as the bands are open and closed at differing times of day... I offered this same scenario to the Winlink2K Group... Work with us not against us... Only to be ridiculed.. I see it as their lack of knowledge of the digital arts ... And just a wanton act of conspiracy to kill any direct competition... Money flying between someones hands. They know packet is a great competitor and with the advent of the faster modes ran by those who have the funds to augment their packet systems or those who have no desire to run packet but will link with those that do.. We can make the HAM RADIO Digital Network a great thing.. Far superior to any single mode or modes.. Think of Packet Networking as a low and high cost system... Fully compatable within and of itself.. It can be fully isolated from teh WIREline.. Wheich is where everyone seems to be headed.. Let me ask a question.. Any phones or wired modes working in New Orleans LA..

Now I see why the CW ops are saying the removal of CW as a requirement will mean the death of CW.. It is all too easy to kill something... Man is a great destroyer.. What we need here is cooperation, Creativeness and a new level of invention... The problems with packet in the 80's and 90's were that everyone wanted speed and more speed.. they wanted the Internet type things... But did not want to spend the money on equipment to go faster VIA RADIO... Why would they want to spend that Money now.. When they have all THEY want on the internet... That is all fine and good for them.. If they want to chat live with uncle Bill or aunt gracie via VOiP thats ok.. If they want to talk to an other HAM on VOiP thats their business, As long as it does not replace Ham RADIO... What I propose is we finally do what I envisioned in the 90's.... Enhance packet radio with faster modes... For those with the financial means make it happen. For those on a budget work with what you can.. Compatability is the KEY. Compatability does not mean it must be SLOW... Those who make the faster modes work can work on way to cut costs... Experiment with faster packet, on HF. Continue working on soundcards BBS Software,.. Experiment with BBS Software that will allow Pactor Packet a form of Q15X25 being worked with now by my good friend N5PVL on 18 MHz.. I will let him add what this does for HF Throughput... We are breaking new ground with faster modes.. But they are all compatible with Packet AX25 on HF... Unlike the expensive WINLINK2000 which is not.

As far as the comments about better immunity against propagation problems and co-channel QRM... That is simply not that big a problem.. Multi HF Ports help Proagation. Yes QRM is but by far mostly Pactor Robots tend to not listen first and destroys a packet link out right.... Packet uses carrier sensing. to know when a channel is in use.. Pactor only senses Pactor..

See www.USPacket.Org the only truly almost live updated Packet information Website. Look around and enjoy.

I urge all HAMS and others in our group to please add to my statements, all facts that will show or substantiate our claims or their claims.. I believe you will see.. The truth..

Let us get off our butts and quit trying to KILL HAM RADIO and work together for a change to make it the Greatest thing since sliced Bread.

Our prayers are witth our fellow HAMS and brothers and sisters who are in the Hurricane Ravaged areas.. And that they get their lives back to some form of reason as soon as possible.

International Amateur Radio Union Region 1 Europe, Middle East, Africa and Northern Asia Founded 1950 General Conference, Davos, 11 to 16 September 2005 SUBJECT Abandonment of Packet Radio on HF (AX25 standard with 300 Baud, 200 Hz shift) Society DARC Country: Germany Committee: C4 Paper number: 14 Contact: Ulrich Mueller, DK4VW e-mail: dk4vw@darc.de Introduction This paper recommends to discontinue the operation of packet radio mailboxes and gateways on HF and explains why. Background Although packet radio mode made it possible in the eighties to run new things like mailboxes, gateways etc., packet radio never was an adequate mode for the existing conditions on HF bands. Problems with packet radio mode were learned by practice and proofed by closer theoretical studies. Later other modes have been developed (first AMTOR, then PACTOR, PSK31, MT63, just to mention some) which could handle e.g. messages exchange with better immunity against propagation problems, co-channel QRM etc. all of them show a better data throughput. Keypoints Replacing packet radio by better modes would result in more reliable links between stations involved, improving the use of the designated spectrum. Resolution The IARU region 1 band plan should not specify any special segments for packet radio anymore. IARU member societies should encourage their members to abandon packet radio (AX25 standard with 300 Baud, 200 Hz shift) operation on HF. DV05_C4_14 DARC Packet radio on HF 1

As television moved to the digital age, I was looking forward to this technology making higher bandwidth digital components available more cheaply that ham radio operators could use. The ATSC television system carries a data rate of 19.39265846 mbps over a 6 MHz wide channel using 8VSB technology. This is something ham radio could use on UHF and SHF frequencies to transmit some high speed digital data in less spectrum. So I was looking forward to components like modulators that take a raw bit stream (that in a TV application would carry the ATSC formatted data) and output RF (to be upconverted to the frequency of interest), and demodulators that to the reverse to reproduce that same bit stream.

The movie industry (e.g. Hollywood) has been insisting on copy protection for their movies, to (as they claim) prevent then from entering the piracy stream taking place on the internet. I can understand theur concern and in principle I also support it.

However, I just learned that what they want to do to enable protection in the over-the-air TV broadcast is in fact not protection at all. I had assumed they (Hollywood) learned their lessons and started to use strong encryption to protect the content until it reaches the final device that plays it out. But in fact, the "Broadcast Flag" for TV is not anything like this at all. The "protected" content is still transmitted in the clear, unencrypted. It's just simply flagged (now it makes sense where they got the odd name for it) as "do not allow this to be copied" (they should have called it the "do not copy flag").

The real problem with this, though, is that all of this "protection" relies on a prohibition to be applied to devices such as demodulators, and it covers general purpose demodulators that amateur operators could use for transmission of any arbitrary bit stream. Such demodulators would be required to interpret the bit stream as ATSC television in order to be legal for sale under this rule.

Currently, the "Broadcast Flag" FCC rule was struck down in court. It is up to Congress to clarify or change statutory law that affects this to allow the FCC to implement such a rule. I suspect Congress is very likely to pass such a law. Hollywood very much wants this law, and while they "own" a lot of Congress people, there is also the issue that without such a law, Hollywood may not produce (as much) content for over the air broadcast in high definition video.

But there may still be time to act on this. I would like to suggest all hams in the USA contact their Congress persons and urge them to make sure that any law they impose that provides for copy protection for digital and/or high definition television also have terms that ensure generic purpose devices like demodulators with all of this technology will NOT be required to comply with the interpretation of data bit streams. Perhaps this could be made to work for devices that specifically do not cover all TV channels, since amateur radio use would not have to involve that. But we need to make sure we have some exception in the law to ensure the rapidly dropping prices of this 8VSB digital technology can be usable for hams setting up new 19.39265846 mbps digital data links. In the next few years such a demodulator could be built from one or two chips at a cost well under $100 due to the same chips (doing error correction codes, trellis coding, and polynomial (de)scrambling, as well as RF conversion) being mass produced for the digital TV and set top box market.

Hi Folks:
  I've been getting interference from a rather strong transmission on
50.00 or 50.03. It sounds like a slow spread-spectrum, hopping all
over the place. 50.03 sounds more like just a carrier, maybe a birdie.
 The 'hopping' seems to be centered around 50.00.. I'm hearing and
'seeing' this on an IFR Spectrum Analyzer with a loaded antenna on a
metal building. I'm hearing it now. Kinda had a rythm to it! Anyone
hear it? I'm in jersey, FN20ok
Harry

Reminds me of the past, on the Novice bands, with the old A.M./C.W.

rigs-- when you forgot your morse, or the other guy couldnt copy
your fist -- Simply switch to A.M., grab the mic, and -- "WHAT I SAID
WAS----"!   Seemed to work 40 years ago, if you didn't get caught!

Turn off any computers in the area.
```

If that cures it, turn computers back on one at a time.
Check ethernet cables.

lots of them.
even showed up on fox news and nbc.

unfortunately, the DHS/FEMA are trying very hard to keep everything on their plate (thus even hams with the American red cross are being told to pound sand in some cases).

4CH Electric RC Helicopter for $83
Condition: 100% Brand New
Shipment includes everything and ready to fly. The only thing you need
in additional is just the AA size batteries for the transmitter.

Detail of the helicopter, refer to http://www.HJ2K.com

Hi, i'd like to invite those interested in Iridium to join our discussion-group where we currently look at the possibilties of receiving and decoding Iridium signals.

As you may have noticed the Iridium satphone system has currently gained a lot of attention thanks to it's use in Iraq and in the Katrina area.

Here's a few technical details:

Handset TX-power is an average 0,6 Watts
RX sensitivity is -118 dBM
Frequency-band 1616-1626,5 MHz (L-Band)
Duplex is Time Division Duplex TDD (RX/TX same freq)
Data-rate 2400 Bd (V42b compression)
Modulation is QPSK
Acess/Multiplex is TDMA/FDMA
Coverage: 100% Worldwide (sat in sight)
Calls currently barred to: N.Korea,N.SriLanka
Use forbidden in: Cuba,Iran,Libya,Sudan,Angola
Services: Voice,Data,Paging,Voice PTT,Group calls
Mobile < > Sat link=encryption NO (?)
Sat < > Groundstation link-encryption YES (?)

I hope it's not BPL.  They've been talking about BPL lately.  That
would suck..
Harry

G'day Guys!

Came across your thread and just thought I would give you all some
great news about Q15X25!

Currently there is finally firmware being developed for the Kam XL Dual
port DSP TNC range!.

This is great news for those who don't wish to rely on PC / Sound Card
hardware to run this mode, finally there will be a small black box
solution!.

Regards,
Ken.

Cool. I wonder why nobody builds this stuff directly into radio tranceivers.

What I really want is a portable PSK31 tranceiver with an alphanumeric keypad, 4 line (or so) LCD text display, AA battery pack, all the PSK31 modulation/demodulation stuff, and all the RF stuff in a single box, no computer needed. I'm imagining something about the size of an FT817 and reasonably rugged. It could be single band, like 20 meters, and it would of course have a computer port for when a computer was available. That would be a way to have fairly reliable DX portable communications without resorting to satellites.

I wonder why nobody makes anything like this, or builds the feature into FT817-class radios. I'm sure there'd be demand for it.

For one thing, the market for digital modes is so small compared with the market for voice operation. For another, the digital modes keep evolving rapidly, so it's a lot easier to use a PC to develop and distribute software than having it in some form that only works in a particular make and model transceiver.

Seems like the transceiver makers are just now getting around to having the higher-end models able to decode and display RTTY. That isn't a feature I would pay for, because I do lots of digital modes, and because I would imagine those that run in a PC might do a better job of decoding than something built into the transceiver. The PC software gets lots of user experience and frequent updates until it is more or less optimized. You don't get that with something built into the transceiver.

Not to say that you don't have a legitimate wish for a highly portable PSK station. Just that it is unlikely to happen in a commercial product.

Hi Ken,
    As soon as they have that Firmware available I will be getting one...
Have been playing with MixW and Q15x25.... Nice....

I do like the TNc idea as well..

Robin, G4DVJ, and Chris, G8LVK, have put up on their Monitor Internet website their hardware mod for the Realistic/Radio Shack DX-394 for downconversion to a 12kHz 3rd IF for DRM and other sound card DSP demodulators such as SDRadio. A beautiful piece of work it is, too, both in execution and publication, incorporating the Sat-Schneider module. That prompted me to look over the other mods and I see some added illustrations, if not additional mods, since I last looked. The bhi DSP module installation is especially sweet, albeit pricey.

So if you have not visited their site in a while, do so, and be inspired!
Its at
http://www.monitor.co.uk/radio-mods/dx-394/dx-394.htm#mods

Great job, guys!

You're probably all familiar with legendary UFO talk show host Don
```

Ecker. But if you're not, then you really want to check out his new radio program. You can download his show directly to your computer. I've heard that he is about to do a interview with the world famous Zecharia Sitchin who hasn't given an interview to anyone in years. It's free so I've been told. His website looks cool. Might be worth check out.

<snippety off-topic drenn>

And this would be related to amateur radio digital modes how, exactly?

PLONK!

International Space Station School Contacts on Oct 5th, 6th 7th

Ham radio ISS school contacts
ARISS Contacts on October 5th, 6th and 7th
Listen to the contacts 'live' on Echolink join the Amsat
conference room number 101377
The International Space Station's Expedition 11 crew may be
winding down. However, their ARISS school contacts will
be very active this week with 3 scheduled sessions.

Each session will be a telebridge conducted in English.
Sessions will be held on:

5 October 16:59 UTC -- Princeton High School, Princeton,
New Jersey
6 October 15:07 UTC -- Ft Hamilton High School, Brooklyn,
NY
7 October 13:33 UTC -- Ridgefield Park High School,
Ridgefield Park, NJ

Princeton High School, Princeton, New Jersey

Station NN1SS in Greenbelt, MD will call NA1SS at approximately 16:59 UTC.

"Princeton High School is a nationally recognized high school listed frequently in various publications denoting outstanding academic achievement. Princeton High School students excel in the humanities, the fine arts, and the sciences with students performing in Smetana Hall in Prague and competing with the US Physics Olympic Team in Seoul, South Korea. The student body is a diverse group representing a wide range of interests and backgrounds within a school community in which 17% of our students claim one of 38 languages other than English as their first language."

Students will ask as many of the following questions as time allows:

1. Are the shapes of the continents as defined as they appear on maps and globes?
2. How much less time will pass in the ISS than on Earth, due to relativity?
3. If it weren't for family and friends, would you want to return to Earth?
4. What are the day-to-day jobs of the space station?
5. How do you sleep?
6. What is the worst situation you've encountered in space?
7. What luxury do you miss the most?
8. How fast did you travel to exit the earth's atmosphere?
9. How would you describe space when you look outward? If you space walked, what went through your mind the first time the airlock opened and you saw space?
10. What does weather look like from space? For instance, could Hurricane Katrina be seen moving?
11. Can you really see landmarks such as the Great Wall of China from space?
12. How often do people get space sickness in the ISS?
13. When you come back, what will you miss most?
14. How much of the day is left to yourself and for sleeping?
15. How much bone and muscle mass will you have lost through out your trip? How would it be if you went to Mars for 3 months?
16. What is good or the best on the menu?
17. When were you first interested in space travel?
18. What about space intrigues you and that you do not understand? What have you been able to learn in your travels as of yet?
19. My brother wants to be an astronaut. What advise can you give him?
20. How does your body feel in low gravity? Can you feel

the effect? Is it like floating?

Ft Hamilton High School, Brooklyn, NY

Station VK5ZAI in Kingston SE, South Australia will call
NA1SS at approximately 15:07 UTC.

"Fort Hamilton High School is large urban public school of
5000 students in a suburban setting of Bay Ridge,
Brooklyn. Our school reflects the ethnic diversity of New
York City. We have strong academic programs geared towards college
preparation, with
advanced placement and honors classes in all disciplines. Our
communication with will
benefit our student population, especially the astronomy classes."

Students will ask as many of the following questions as
time allows:

1. What motivated you to go into space?
2. Did your journey so far fulfill your expectations? Why or why not?
3. How long did you have to train to prepare for your space flight? What was the most difficult part of your training?
4. How is the training you received actually different than traveling into space?
5. How long will you stay at ISS? What type of work will you be involved with?
6. If you could change one thing about your space mission, what would it be?
7. Besides your family and home, what do you miss the most about Earth?
8. How do you spend your free time at the ISS?
9. Do astronauts have to do daily exercises and what type?
10. How long does it take to reach the ISS? How fast is the shuttle moving after you leave the atmosphere?
11. How are basic life functions like sleeping and digestion affected by the zero-gravity environment at ISS?
12. How are medical problems such as illness or breaking a bone dealt with in space?
13. How would you fight a fire in a zero gravity environment?
14. Are there any plants or animals on the ISS being experimented on? What type of experiments?
15. Is the supply of oxygen on the ISS constantly being supplied or is there a machine that produces it?
16. How do you prepare for a space walk? and what special precautions have to be taken?
17. Does cosmic radiation affect you during your time in space?

18. Do you believe in the existence of other intelligent life forms in the universe?
19. What do you eat at the ISS? and How?
20. How many astronauts fit in the ISS?

Ridgefield Park High School, Ridgefield Park, NJ

Station ZS6BTD in Parklands, South Africa will call NA1SS at approximately 13:33 UTC.

"Ridgefield Park Junior-Senior High School is a 7-12 school of approximately 1,100 students located in Southeast of Bergen County. The school is a receiving district for 9-12 grade students from Little Ferry, a community that borders south west of Ridgefield Park, just across the Hackensack River."

"The school has a proud history that includes some rather famous graduates. Among them Ozzie Nelson of Ozzie & Harriet fame and Bud Lewis, the copilot of the Anola Gay which dropped the atomic bomb on Hiroshima, which signaled the end of World War II. It is also the proud alma mater of Greg Olsen."

Students will ask as many of the following questions as time allows:

1. I have read that you plan to use your company's miniaturized infrared imager to observe Earth's atmosphere and agricultural crops on this trip. What do you plan to do with this information and how do you foresee it will help us in the future?
2. Why are you turning the infrared camera toward space, and what do you hope to accomplish?
3. What new products do you foresee as the result of the experiments conducted on this mission?
4. Sapna and I won a national chemistry competition based on our ideas for the development of a transdermal nutrient patch. Is anything like this currently being used in the space program or do you foresee its use in the future?
5. I understand that there are three biological experiments for the European Space Agency. Could you please briefly describe them?
6. Can you explain the scientific significance of the experiment on crystal growth in space?
7. Could you explain the significance of the experiments that will test small free-flying satellites, as part of a project called SPHERES?
8. Why is space such a good place to conduct experiments in cell research?
9. Which of the jobs that you performed on board did you

like the most and why?
10. Please describe any geographical or man-made features on the Earth that you can see from space.
11. Have you seen any storms like hurricanes or tornadoes from space? What do they look like?
12. What type of problems have you encountered in the space station and how have you solved them?
13. What is the role of Expedition 12?
14. Dr. Olsen, why would a very successful business man and entrepreneur like you want to travel into space?
15. How will this opportunity to experiment in space benefit others (adults, children)?
16. How different do such celestial bodies as the sun, the moon, and any of the planets look from space as compared to how they look from Earth?
17. What would have happened if anyone had gotten seriously sick during the trip?
18. Was all your training in English or did you have to learn Russian to be involved in the program?
19. Do you see yourself as being involved in the U.S.A. space program someday?
20.What are your plans when you return from this Russian mission?

As always, the ISS will be audible to anyone listening in on the 145.80 MHz downlink. Please note, since these are telebridges the ground stations will NOT be near the school that is contacting the ISS.

Please note, the amateur equipment on the ISS will be turned off prior to the beginning of the contact. It will be returned to service as quickly as possible.

Upcoming ARISS events can be found at
http://www.amsat.org/amsat/ariss/news/arissnews.txt
The next scheduled event is with students at Princeton High School, Princeton, New Jersey on Wednesday, 5 October 2005 at 16:58 UTC.

ARISS is an international educational outreach program partnering the participating
space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and
IARU organizations from participating countries.
ARISS offers an opportunity for students to experience the excitement of Amateur Radio
by talking directly with crewmembers on-board the International Space Station.

Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on
ISS can energize youngsters' interest in science, technology, and learning.

Further information on the ARISS programme is available on the website

http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of
Canada). Information
about the next
scheduled ARISS contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

I recently purchased a second-hand Hal DXP-38 which works rather well
on RTTY as I discovered in the CQWW RTTY contest recently but I really
do want to find some live person to person Clover activity.
Is there any? Where exactly? I read comments on eham.net from last
year saying some people hang out on 14.063 5 LSB but is that not, for
the US hams with their obligatory band plan, outside of the digital
segment?
It seemed to me that Clover was a somewhat elegant mode of digital
comms not least with it being, effectively, fully duplex. I appreciate
that PC-generated digital modes are increasingly popular but there
must surely be a lot of Hal equipment out there?

Dominic,
Look for a U.S. Ham Hank Oredson W0RLI. He was very active with CLOVER, along with Dennis Ely W5XO, and a pretty good bunch of Hams around the U.S. I know there are many more, but Hank is sometimes on this Group.
73,
Paul N5XMV

I've occasionally run into a W6 who hangs out around 14065.5 LSB. It's pretty lonely there.

I have a friend who twisted my arm to get into Clover when it first came out, using the original PCI-4000 boards. He still seems to like Clover, mostly because of the quasi-full-duplex operation; at least I haven't been able to get him to try any of the newer modes. I haven't used it in quite some time. The new sound card modes seem to offer a lot more activity and perhaps better performance.

Hi Paul!

The CLOVER BBS forwarding operations pretty much shut down a couple years ago in favor of PACTOR II. I still have some controllers, both P38 and PCI-4000, but have not had them on air for a long time now. I tune the digital segments from time to time, but no longer hear any CLOVER sigs.

Well I shall just have to keep making occasional CQ calls on a regular
weekly basis in the hope that somebody somewhere will recognise the
sound and fire up their Clover terminal unit. Unfortunately my station
is very modest with at best an MFJ magnetic loop (horizontal) or a
7Mhz doublet (which is useable most bands) so I wouldn't ever
guarantee a signal into the USA but I will give it a go. Probably
14.065 5 LSB.
Thanks for the information.

Dominic, G4SLW

Same story with PACTOR, very difficult to find partners for a live QSO. Most of my PACTOR live QSOs (with a human at the other end) nowadays are skeds with friends. You may want to contact some of the CLOVER BBSs listed here to verify your setup:
http://users.iafrica.com/z/zs/zs5s/index_buls.html

Being a fixed station (non-/mm) I'm mainly using the numerous (PACTOR) BBSs
to probe the propagation. Much better than monitoring beacons, because
it also tells you how your signal arrives over there.

That list is very much out of date, 5 years old.

I have been off CLOVER for 4 years, same for N6IYA
(Who is now W6JWS).

I recently was given an older KAM All-Mode TNC. It only has version 3.06
firmware. I was hoping to find a version 5 or later EPROM. Does anyone
have an EPROM to sell me or can tell me where to get the bin file to burn my
own EPROM. I have talked to Kantronics and they told me they no longer
support this TNC. Thanks.

Hi I have for sale two Comet/NCG Meters :

1) NCG-3000 118 mHz-530 MHz SWR / Wattmeter 5-20-200 Watts
  Bought New in Box for $ 110.00...Item is in mint condition.
  Make offer

1) Comet CMX-3 140 mHz - 525 MHz SWR / Wattmeter 20-50-200 watt
   Is remotable...Paid $ 170.00 New In Box Item is in Mint condition.
   Make offer...

Thanks
Carl

Thanks for bringing this up, Phil. I've had discussions with some
local ATV guys, and they've expressed the same sort of concern, and
have contacts at FCC aware of the issue.

The latest version you can fit in a KAM without expansion board is
version 6.1 - you can find the manual updates for PACTOR on www.mods.dk

Another point to note is that if your KAM is pre-version 5 then you will
need to upgrade the EEPROM IC otherwise it will not work properly with
later firmware.

Thanks for the info.  I knew it would only work with ver 6.1 but I didn't
realize I needed an EEPROM as well.  Maybe I got what I got doesn't seem
like much chance on finding both chips.  Thanks for the link to the manual.

Hi,

I am involved in design of satellite FSK transceiver. Could anyone help
me in
knowing the FSK transceiver chips capable of transmitting around 30dbm.

As, when I went through data sheets of many FSK transceiver chips, they

are capable of transmiting only 10 dbm.

Thanks in adavnce.

Regards,
Thoppay.

Standard EEPROM chip. I have the V5 upgrade instructions around somewhere and v6.1 firmware can be found if you look around for it, all you need then is an EPROM programmer.

Just picked one up from the "Bay"...they've been recently discontinued and Universal Radio no longer supports them. I believe they were actually produced by a company called Universal Electronics.

Will probably be looking for a manual and maybe latest set of EPROMS (which by now are probably "unobtainium"). We'll see what version it is when it arrives.

Appreciate any tricks or guidance about this decoder.

Dino KL0S/4

I have got an older decoder TELEREADER CWR670 but the two EPROM 2716
(system and video) are out.
Does anyone have the listing of their content
Manythanks
Albert F6GPB

Announcing a new Rigblaster discussion group..

I want to let you know about a new "Yahoo" discussion group about the
Rigblaster's. It is designed to be a resource for all Ham's interested
in the Rigblaster Pro , RIGblaster Plus , Rigblaster , & RIGblaster
Nomic . This will be a MODERATED group to keep the trash out. If you
are interested in the Rigblaster or own one please join us.

The web link to see about it is:

http://groups.yahoo.com/group/rigblaster/

Thanks for your time!
Martin Brossman

Rigmate Kits are now available!

All the details are available at:
http://members.cruzio.com/~soennichsen/rigmate.htm

Features:

USB interface more convenient as fewer
computers/laptops include an RS-232 serial port.

The RigMate provides an adjustable and transformer
isolated interface for the audio signals to and from
the PC sound card.

It also is a USB interface to the PTT, FSK, and CW
signals used by many types of digital mode software.

It is also a full CI-V interface for ICOM radios.

Acts as a USB to Serial converter to a standard DB-9
connector.

Powered completely through the USB interface.
May be used "bare-board" or mounted in an enclosure.

RigMate Kit Specifics:

Complete kit with hard-to solder IC installed is $65.

The kit includes all necessary parts, a high quality
PCB, instructions and drivers on a CDROM.
(USB cable not included)

I'm looking to design and develop a remote controlled motor. The way i want to implement is to have a RF transmitter chip which will recieve digital inputs (pushbuttons) convert it to analog signal and the transmitter will then transmit the signal to RF receiver chip which will then convert it back to digital signal and send it to a PIC microcontroller (16f818, specs: 3V, 4MHz oscilator and 1 Mhz internal clock). The PIC microcontroller will then understand the signal and increase or decrease the speed of the motor accordingly. (Basically the concept is based on a remote control cars which kids play with).

I'm interested in knowing which kind (specs,brand etc) of RF receiver and transmitter chips can i use to work in this project. Obviously being a college student i would like to purchase cheap parts :) Any input will be higly appereciated.

I am contemplating treating myself to a home weather station this Christmas, measuring all the usual weather variables. Must have indoor instrumentation, linked (preferably) by cable, and must have serial output for PC processing.

Recommendations anyone?

Have you tried a pine cone Ian ?
I have had mine fitted with a serial port & now its up to date it works
realy well

Hmmm. �7.99 per unit, with no obvious sign of any method of connecting
to a PC. Not really what I am looking for.

After several weeks offline, HamBlog.Com is back with new software and a new look.

It's the same old deal though... A free weblog for Hams.

The old software had created a haven for SPAMMERS, who had ads for sex, drugs, and home mortgage loans infesting all of the blogs and comments.

The new software doesn't have much sense of humor about SPAM though, and does a great job of eliminating it before you ever get a chance to see any of it.

Come and see us at HamBlog.Com, and don't forget HamBlog's sister-site, HamPoll.Com , another great place to express your ideas and opinions as a Ham!

Charles Brabham, N5PVL

This year I've had a hard time keeping a TNC on my HF Packet BBS... First a lightning strike took out the entire station and once I had rebuilt or replaced all that, the TNC I got for HF didn't work very well.

I never did track down what the problem was with that TNC, but I could tell that the TNC was the problem because I could hook up the same radio/antenna setup to my hamshack computer running MixW in 300 baud Packet mode and it would perform just fine.

Then one day I was browsing the various menus in MixW and realized that it was capable of emulating a KISS TNC if you could give it a second COM port to use in addition to the one used for the soundcard interface. - I hooked up a null-modem and cable to that port, and had a virtual KISS TNC. - I hooked it up to my BBS computer's COM port where the HF TNC was supposed to go, and it worked perfectly. The BBS now had a good TNC for HF and immediately started transferring messages with other stations in the ARRL SkipNet.

"Hey that's great!" I thought. I figured that it would do as a temporary fix until I could get my TNC straightened out. - I would run the BBS software on the old DOS PC, and have MixW on the "Winders" computer, emulating an HF Packet TNC. (The BBS computer also has a TNC hooked up for VHF, but that works fine and so does not get more mention than this.)

It turned out that I was very wrong about that, and I had my nose rubbed into it within minutes of getting the new setup going... I looked up at the MixW display, saw that I was slightly off-frequency, clicked the mouse and set my station exactly upon the one it was communicating with in a lot less time that it takes to describe the action.

Anybody who has ever tuned in an HF Packet signal 'the hard way' without a waterfall display knows how radical an improvement this is... Instead of endlessly twisting the dial and pursing my lips in the hope that I would accidently end up on frequency with the other HF Packet station and settling for just about any level of communication at all, now I could just point 'n click for instant accuracy and assurance in tuning. After using a waterfall display to tune HF Packet, anything else is comparable to fumbling around in the dark.

I was already spoiled... It took less than an hour.

It was (and is) great to be able to see and identify nearby and interfering signals instead of just wondering why the link was suddenly slow. Now I can sit back and watch PACTOR III stations come in right on top of an ongoing Packet net just about any evening. - It literally happens every day, something I had not been aware of before.

Those PACTOR III lids have got to go. - They are not fit company for thier fellow hams onair, where it matters the most.

Then I read about a new release of the Q15x25 mode dll package for MixW, and how the new modem was scalable... That is, if you set the modem for 1200 baud instead of the default 2500 baud, the modem would scale the signal down to half of the previous bandwidth.

MixW considers Q15x25 to be a "Packet modem" even though it really uses PSK tones instead of Packet. At any rate, the end result is that switching my BBS from HF Packet to Q15x25 mode now just takes - a mouse click.

That was it! I put the cover back on the old HF TNC and tossed it into the junk box.

If you are a Packet BBS SYSOP on HF or are thinking about becoming one, do yourself a favor and check this out. - You'll be very glad you did. Obsolete Win98 machines work fine for this application, and in many places can be had for much less than the price of a new HF-capable TNC.

Once you try it, you'll never go back.

I've found that disgustingly old notebooks are amazingly useful for things like this. I had an old 100MHz Pentium notebook running PSK31 for the longest time; it worked fine and wasn't useful for much else.

When you consider that most TNCs have a 4MHz Z-80 inside, it's not that hard to imagine a 100 or 200MHz Pentium can do DSP + CPU duty...

Notebooks are especially appealing since they're entirely self-contained and usually still have a working battery to tide you over short commercial power failures. Ironically, a 5-year old notebook is chopped-liver to pretty everyone but us.

Cheers!
Dana K6JQ

P.S. How many of y'all have AMD64-based notebooks? ;-)

Notebooks have a reputation for producing less RF noise than desktop
systems, too.

I think if one knows he code is a true amateur radio operator. One never knows when the code will come in handy. Although, I must admit I am very lax on using it. I haven't used it for years, but I am trying to brush to on it. I find it fascinating.

I'll add to that.

True amateur radio operators can build spark gap receivers and
transmitters from scratch using materials they have in their junk boxes.

Can you do it for me and tell them,
it is high time to abandon Morse code, for amateur license tests.

If you apply as a singer in an opera,
would you like it when they test your ability to stutter?

Well crap if that is all it's good for then lets abandon all the high tech'
poo and
go back to the old Semaphore Flag Signaling System. No electrons needed.
LOL or perhaps smoke signals from here to yon.

Welcome to the 21st century.

So what? It hasn't been legal to operate a spark transmitter for a couple generations. You don't even have to be a ham to build, just pick up some of the early books and follow the instructions. The receivers of that era would be useless in today's congested RF spectrum, as well.

On the other hand if you can design and build a state of the art communications system without outside help, that is something to brag about.

I do wish people would not refer to me as a 'ham'.

Amongst the very few things I am proud of is that I am a true Class-A Radio Amateur.

Incidentally, as a British pensioner, my annual licence is free. When requested I just have to confirm I am still in circulation. Same applies to riding on buses when mobile or not mobile, sober or not sober.

Arn't you American Amateurs envious?

Reg, G4FGQ.

I can't imagine why we should be. I've been a ham for nearly 50 years
(Extra class for more than 40) and have never paid a cent for my license
(or my commercial FCC licenses, for that matter). Can't recall the last

time I rode on a bus. But the 17.5% tax I'll pay on everything I buy in
your fine country during an upcoming trip will be my small contribution
to your continued enjoyment of your lifestyle. Then I'll return to
Oregon, where we have no sales tax and I can ride on the light rail for
a couple of hours for a bit under a pound. Even for those of us who
aren't pensioners.

Roy Lewallen, W7EL
Ham.

   What frequency?  The last system I worked on was a 70 MHz IF with a
90 MHz upper limit for a dual channel telemetry receiver with  a
diversity combiner all done in the digital domain.. It was the
L3-Com/Microdyne RCB-2000.  It also had a 70 MHz IF output that was
regenerated after the FIR filters to feed wideband logging recorders for
later analysis.  Multiple IF bandwidths and Video bandwidths. It was
controlled by a custom GUI under embedded NT, and had IEEE-488, RS-232
and Ethernet ports for remote programming and control.  All for just
$80,000 per radio.

  The DR-2000 was the same basic radio chassis, but it was just single
channel receiver.

Reg, the bomber terrorist sitting next to you on that bus
seems to have received as many benefits from the British
government as you do.

BTW, that was a joke. Being retired, I don't know what the upper
frequency limit is for DSP sampling nowadays. I was using one
million samples per second systems at Intel ten years ago.
They worked well at 455 kHz not only for filtering but for
decoding/detection.

Cecil, I thought you and I did our 'DSP Filtering' by adjusting the
regeneration control or the whisker.

What's an IF ?? IF! If What??

Strangely enough, I never used anything except a superhet.

> What's an IF ??

455 Khz on everything I used back then. With no RF amp,
my S38 would receive the same signal on two different
frequencies on 15m, sometimes eliminating an interferring
signal in the process.

Not the least little bit. All our renewals are free regardless of age or
work status except for those who elected to get a vanity call sign of their
own choosing instead of sticking with an assigned call.

I would have loved to stick with my assigned call when I moved
from TX to CA in 1971 but the FCC forced me to give it up. Now
they have charged me the social security money they gave me to
get it back.

Well for myself I wouldn't have picked the spaghetti soup group of letters I
had to
start with. But after retiring I thought I might as well get a little
vain... That's all
that left after a while. he he.... So for a whopping $20 I got a vanity call
after
moving to a new call area. I thought in my second life after heart surgery,
back surgery,.ect. I might as well have a little fun.   After all isn't that
what a
hobby is for? I'll get 10 years out of my new call but I can't get that
far on $20 worth of gas these days. eh. Now all I need is about $20K
for that new $13,000 ham radio and a tower and antenna   ha ha.

What ever is fun is ok. Even if it means dumping a 25 year old call sign.
Let me see Ham radio so varied what next.
Been there done that.... DXCC... RTTY... OSCAR.,.. PACKET...
oh and of coarse RAG CHEW codey slow no problem getting in the
time for that award. Contest... Special events... Homebrew...
and a cold brew...

Oh BTW it isn't the one with the most toys... It's the one who gets to
play the most with their toys.   Have fun everyone and don't take
it too seriously or you get an ulcer and high blood pressure.

Cheers 73 ol' WB9SMX new K4TWO when the papers arrive. ;-)

Though this appeared in the Rec.radio.equipment newsgroup and is being broadcast to several others that may or may not really be appropriate for this diversion from the original subject, I can't help but responding....

When it comes to a vanity call, the relative pittance we are charged for a call that makes sense to us (whether because of an old call in another location, or because it's easier to transmit in morse, or even fits some other plan we may have) is worth the money in my opinion, and I imagine to anyone else that took a vanity call.

For myself, I chose my current call because the people at FCC didn't give me a call in my area on an upgrade from Tech to Extra, despite an address update way prior to the examinations. Somehow, they managed to show correct postal box address and city, but my state as California (where I used to live), yet the zip code was correct, so our "wonderful" postal service forwarded the license upgrade to myPObox, yet they gave me a California call....
Moving to a vanity call that indicated Hawaii was a no-brainer for me, and I'd be willing to pay 20 bucks a year to keep it, so the increase in costs still make sense to me.... I know I may get a lot of flak from some people because of this, but it's all what it's worth in my mind.... It is a hobby, and thing that are outside "standard assignment" can be expected to cost a bit more.   In my mind, it would certainly be worth less than 2 bucks a month to have a call that makes sense to me in place of one that is from an area where I no longer live.

Thanks
--Rick AH7H

I think they should drop morse as a requirement and add flag signalling instead. You never know when we will have a mass power failure and gasoline shortage at the same exact time!

Sending morse code with a signal light is faster than signal flags,
especially at night.

My National NC-54, i think, had the same design feature!   :-)

Sensitivity on 10 meters was, well different. I could hear W1VUO and
W1GID with excellent Q5 copy. I could never hear who they were working!

I figured out that it must be my receiver. After all, W1GID lived 200
yards North and W1VOU lived 1/2 mile west. Never heard anything else on
10 meters until I bought a REAL radio, HQ-140X.

BTW, in Boy Scouts I did build a Regenerative for 6 meters. It earned a
Worked All TV sets award   :-) Channel 2 is/was a major supplier in the
Boston TV market.

Let's face it, Morse had an important need at one time in the history of radio. As a result, many amateur spent countless hours perfecting this craft. I'm glad they did.

However, technology has advanced (thank God) to a point where Morse is all but obsolete. My hope is that when the FCC removes the Morse requirement, more amateurs will spend that time improving their technical abilities.

The nice thing about amateur radio is that it flexible and offers many (very necessary) opportunities to its ranks.
I believe the Morse requirement just distracts people from other more exciting (and more necessary) aspect of the hobby.

Wayne P. Muckleroy

I am trying to help a friend get started on Echolink. He uses AT&T as a

dialup provider. Does AT&T support the protocols required to make
Echolink work?

Thanks

EchoLink requires that your router or firewall allow inbound and outbound UDP to destination ports 5198 and 5199, and outbound TCP to port 5200. Source ports are dynamically assigned. If you are using a home-network router, you will also need to configure the router to "forward" UDP ports 5198 and 5199 to the PC on which EchoLink is running.

See http://www.echolink.org/firewall_solutions.htm

If you're having trouble getting EchoLink to work correctly, the
EchoLink Troubleshooter utility may help.  The Troubleshooter helps
solve the two most common problems that new EchoLink users might
encounter.

See http://www.echolink.org/troubleshooter.htm

When I first got my technician ticket, my assigned call sign was KI4FAT. After about 6 months, I retired from the Army and applied for and received a vanity call sign of WO2RET. I'm proud of my status both as a military retiree and an amatuer radio operator. When someone asks me what the call sign stands for, I just tell them it means exactly what it says. I also have an amatuer radio operator vanity plate on my car.

As for G4FGQ, the highest compliment I ever had paid to me was after I had been DXing on the 2meter band using a home made Jbeam, I heard an old timer telling the indivual I had been talking to that he didn't catch the call sign but 'that ham with the home made antenna had really done his homework and put it together right because the signal was outstanding.' To have an old-timer call a relative newcomer a "HAM" is probably one of the greatest compliments a person can receive.

Just my 2 cents worth.

Bill, WO2RET

This seems somewhat different than the "university research project".

Why the change in story?

Alan

Greetings

I have problem which I am hoping this group may be able to help me out with... First a bit about me to help you out...

I was licenced back in 1964 as ve3fxq.. and still have that same callsign...

I was in ham radio when sideband was more or less came in.. I was around

when fm and fm repeaters came in.. I was around when packet came in..
etc...

However I seemed to have left ham radio around the mid 90's... Now during
the past couple of years, I have been trying to come back...

I have noticed, however, a strong element of hams talking about digital
signal processing... They say that it allows you to do thinks like
controlling the selectivity much better than we used to do with filters,
etc...

Here is where I need the help... I have looked at websites, which talk
about dsp as if I already know what it is.. and try to sell me on a chip or
kit or board which is suppposted to do dsp.. but I am still trying to find
out how dsp can help me .....

Is there a website which esplains dsp to someone who know basic receiver
consepts and knows 1's and 0's but need help in understanding dsp...

Larry ve3fxq

```

And then if you want to play with it you might start with the digital modes that use the PC and soundcard to create a modem. If you use Linux the stuff is open source so you can look at the code. Even in Windows there may be some open-source stuff to look at.

```

"But the intelligence and facts were being fixed around the policy."

At the Council of Foreign Relations meeting in San Francisco this week, as presented on CSPAN today, June 5 2005, the head Iraq sanctions observer was guest speaker, among others, and the specific line above was explained by one speaker to mean that the original author was meaning to say by use of the word 'fixed' that the facts were arriving in a steady drumbeat supporting Bush's policy, not that the facts were being cooked or distorted in any way.

Another smoking gun that really isn't, except that it's taken that way by conspiracy freaks.

     <snip off-topic garbage>

     And this is related to digital modes of amateur radio operations,
how? Exactly?

     *PLONK!*

Greetings

Well this message is partly about digital misc and partly about me.. I hope
you will excuse the lack of complete compliance..
To help you answer my question, a little about me..
I got my licence in 1964. at the age of 16...same call sign since..
Hams made the change over from am to ssb during the 60's. During the early
70's, hams made the change from local hf to vhf and vhf am to fm...
Then came packet during the 80's...

I left ham radio, without really knowing it, during the mid 90's... I just
realised I was not on the air...

Now comes my question...

Where is ham radio going now?...

I don't know how I got there but I found myself on the arrl website reading
something about digital audio on hf.. apparently you can now put an audio
bandwidth of about 10 khz onto a 3 khz transmitted bandwidth.... sounds, no
pun intended, interesting...

Can someone give me a website that can more, or better, explain how the
process is done?

Does it cause any kind of distortion on the transmitted signal?...

Larry ve3fxq

Greetings..

I am looking for a frequency synthesizer chip that will have an output anywhere from 5 mhz to 15 mhz.. or wider..

channel spacing of 1 hz...

Any thoughts?

Does anyone know why we cant access our ctrl station ab6usa via
our "MARS" digipeater??   Someone says there is no way to setup
winlink so it will accept connections thru a digipeater.   So
far we have'nt found out why.
                     Joe/ABM6JF

Because of the availability of examples, the AD9850 is probably the simplest to use. But some of the newer AD chips will give you cleaner output. They get there with higher frequency oscillators, though, which translates into more power. Most folks clock the 9850 at 100 or 120 MHz. Canned 100 MHz oscillators tend to be pretty power hungry. The 9850 also gets hungry as the clock goes up. At least some of the newer synth chips use less power, but I don't know what you can do about 400 MHz clocks.

TI has some VHF/UHF chips that I know some folks have run as low as 50 MHz. These use a crystal in the 20 MHz range instead of an external clock and are pretty reasonably priced. If your objective is to go into a mixer, then you could divide down a UHF synth to get to your 5-15 neighborhood.

Serves you right for prostituting yourself to the WinLink group in the first place. You should be ashamed of yourself.

My feeling is that if you are going to turn on your fellow MARS operators and fellow hams by participating in the ARESCOM/WL2K scam - then you deserve your current difficulties, and many more besides.

I'm surprised that you haven't memorized the WL2K propaganda by now, so you can parrot the 'party line' with the rest of the WL2K goons. A quick check of the WL2K propaganda page will explain to you why cooperation with any other aspect of the hobby (like Packet for example) is a big no-no in the sicko world of WL2K.

Read and enjoy!

Because is does not do digipeating?

Naw, that would be too simple an answer :-)

Build a network.
Forget digipeating.
Ignore WL2K, it has little or nothing to do with radio.

I'm running my own IGATE with a TH-D7(G2.0) HT as a remote. It digipeats, and pipes the position reports to findu via the internet. The only problem is that the HT doesn't give me that soul-satisfying "MY POSITION" message when it hears the digipeat.

By some great misfortune, I happened to run the digipeater with a mistyped callsign (OH NO!!!), and I didn't get the MY POSITION message even when the digipeat was running (at low power, off the internet) under a different callsign at a different location.

The other problem I have with the HT is that under certain conditions (Data Band: B, 144MHz) the transmit bar display (actually the battery level) doesn't activate during a packet transmission. Under any other combination of settings (PTT, or 440MHz transmission, or Data Band A), the bar display will activate. Even when the bar display fails to activate, it transmits, and the red transmit light goes on.

Could these be firmware problems? I have the "upgraded firmware" version.

```

This one is subtle. It looks like a firmware problem, and I'm wondering if anyone else has seen it. I have a _brand_new_ D7.

With a specific combination of settings, the bar indicator (which shows battery level on transmit and signal level on receive) won't activate when transmitting. It actually transmits, and the red light goes on, but the bar doesn't activate.

The conditions are:
beaconing, not responding to the PTT switch
Data Band B
144 MHZ band

The bar _will_ activate if you change any of the above:
using PTT switch
using Data Band A
using 440 MHz on Data Band B.

Try it, let me know what happens...

The "new" has worn off. When a new mode or technique appears, traffic
will pick up again.

You might also look at WACARS here:

http://www.geocities.com/CapeCanaveral/Cockpit/9870/wacars/readme.html

Freeware and you can use your own maps if memory serves :) There should be
information on the above site for creating your own maps.

Runs OK for me on both Home and Pro. I just downloaded and installed it
and it ran without a hitch. I moght point out the requires section says

WIndows 3.1 or later and WinXP definitley comes under later :-)

Hello dear Friends
I have a Color Palm m5151 like new in top perfect condition with metal
case , extra external keyboard , extra external modem , cradle , power
supply , manuals and a software card .
Is absolutely perfect , no scratches or problems , looks like new and I
wish to trade it with AEA MM-3 Keyer .
This palm is ideal for ham radio use and you can find a lot of Ham
radio programs on the WEB . Take a look at:
http://www.qsl.net/va3pkh/palm-ham.html I need a good keyer and I
think the AEA keyers is the best but if you have any reasonable offer
please contact me .
My email is: m o n o t i k a @ y a h o o . g r   of course without
spaces .
Best 73s
Toly

=20
 Contest - Accumulative.

 As from new year 2005 the Nordic activity contest (NAC 50 MHz) will =
move from 4 th. tuesday in the month. As there have been a contest round =
for the last 14 years at
 the present date/time, we feel a valuable activity will be lost by =
moving it. Therefor the OZ50MHz Group have decided to establish an =
accumulative contest at the present
 evening so "business as usual" can be maintained.=20
 To keep things as simple as possible, we will have rules very close to =
the NAC. This means an Open class high power and an Open class low power =
section, a OZ high
 power and a OZ low power section.

 Contest calendar 2005.=20

 January 25 th.   18-22 CET / 18-22 UT
 February 22 th. 18-22 CET / 18-22 UT
 March 22 th.   18-22 CET / 18-22 UT
 April 26 th.   18-22 CET / 17-21 UT
 May 24 th.   18-22 CET / 17-21 UT

June 28 th.   18-22 CET / 17-21 UT
July 26 th.   18-22 CET / 17-21 UT
August 23 rd.   18-22 CET / 17-21 UT
September 27 th. 18-22 CET / 17-21 UT
October 25 th.   18-22 CET / 17-21 UT
November 22 nd. 18-22 CET / 18-22 UT
December 27 th. 18-22 CET / 18-22 UT
=20

Rules - Open class 2005.
=20

Participants.
OZ50MHz Group hereby invites all licensed radio amateurs outside = Denmark to participate in the OZ50MHz Accumulative Contest - Open Class.
=20
=20

Date & time.
Fourth Tuesday in every month - 19:00-23:00 CET/Danish local time. = (Never at December 24 th. or 25 th.)
=20
=20

Section.
OCHP. Open Class 50 MHz - High power > 100 w.
OCLP. Open Class 50 MHz - Low power < 100 w.
Single and multi operators participate in same sections.
=20
=20

Contacts.
Each contacted station counts only ones even if it is /A, /P etc.=20
Duplicates must not be deleted from the log, but shall be listed as a = normal QSO with zero (0) points. In case points are claimed for a = duplicate QSO, ten times the claimed points will be deducted.
All operation in accordance with IARU Region 1 bandplans. No contacts = via active repeaters or EME are allowed.
=20
=20

Exhange.
RS(T) and Locator, e.g. 59 JO55WW. No QSO no. is needed!
=20
=20

Points.
1 point/km + 500 bonus points per WWL.
=20
=20

Awards.
In the annual result only the nine best contests are evaluated. The = first three stations in each section, and the best station in each = country, will receive an OZ50MHz Contest Award.
=20
=20

Entries.

Logs must be received no later than a week after the contest at the =
OZ50MHz Group. Logs received later than that will be used as check logs.

Logs may be submitted electronically to the contest manager, =
oz50mhz@qrz.dk

O. Bj=F8rn Madsen, OZ6OM
Falen 35, 3 tv.
DK-5000 Odense
Denmark
=20

Results.

The contest results can be seen at =
http://www.qsl.net/oz7six/OZ50MHzResults.html
=20

```

Hope to see everyone on the air. I will be working with my club http://narc.net and our call will be VE6RAC from Edmonton Alberta. We intend on doing all bands & modes including SSB, CW, RTTY and will even do FM on 6m & above for folks with only those rigs. Will attempt a QSO with some satellite. Best wishes and good luck on Field Day 2005!

73 de Mike VE6HMG

I beg to differ. WACARS runs just fine on my Windows 2000 Pro-based laptop, and before that I had it running great on Win-NT 4.0.

A simple Google search turned up the home page at:

http://www.geocities.com/CapeCanaveral/Cockpit/9870/wacars/intro.html

I've tested that link. It works fine from WA state. If you're unable to reach it, your ISP may (for whatever reason) be blocking it.

He does, admittedly, have some broken links. 'Registration' doesn't go anywhere, and no images come up with the 'Screen shots' link, but everything else seems OK.

Happy tweaking.

=20
Contest - Accumulative.

As from new year 2005 the Nordic activity contest (NAC 50 MHz) will =
move from 4 th. tuesday in the month. As there have been a contest round =
for the last 14 years at
the present date/time, we feel a valuable activity will be lost by =
moving it. Therefor the OZ50MHz Group have decided to establish an =
accumulative contest at the present
evening so "business as usual" can be maintained.=20
To keep things as simple as possible, we will have rules very close to =
the NAC. This means an Open class high power and an Open class low power =
section, a OZ high
power and a OZ low power section.

Contest calendar 2005.=20

January 25 th. 18-22 CET / 18-22 UT
February 22 th. 18-22 CET / 18-22 UT
March 22 th. 18-22 CET / 18-22 UT
April 26 th. 18-22 CET / 17-21 UT
May 24 th. 18-22 CET / 17-21 UT
June 28 th. 18-22 CET / 17-21 UT
July 26 th. 18-22 CET / 17-21 UT
August 23 rd. 18-22 CET / 17-21 UT
September 27 th. 18-22 CET / 17-21 UT
October 25 th. 18-22 CET / 17-21 UT

November 22 nd. 18-22 CET / 18-22 UT
December 27 th. 18-22 CET / 18-22 UT
=20

Rules - Open class 2005.
=20

Participants.
OZ50MHz Group hereby invites all licensed radio amateurs outside =
Denmark to participate in the OZ50MHz Accumulative Contest - Open Class.
=20
=20
Date & time.
Fourth Tuesday in every month - 19:00-23:00 CET/Danish local time. =
(Never at December 24 th. or 25 th.)
=20
=20
Section.
OCHP. Open Class 50 MHz - High power > 100 w.
OCLP. Open Class 50 MHz - Low power < 100 w.
Single and multi operators participate in same sections.
=20
=20
Contacts.
Each contacted station counts only ones even if it is /A, /P etc.=20
Duplicates must not be deleted from the log, but shall be listed as a =
normal QSO with zero (0) points. In case points are claimed for a =
duplicate QSO, ten times the claimed
points will be deducted.
All operation in accordance with IARU Region 1 bandplans. No contacts =
via active repeaters or EME are allowed.
=20
=20
Exhange.
RS(T) and Locator, e.g. 59 JO55WW. No QSO no. is needed!
=20
=20
Points.
1 point/km + 500 bonus points per WWL.
=20
=20
Awards.
In the annual result only the nine best contests are evaluated. The =
first three stations in each section, and the best station in each =
country, will receive an OZ50MHz Contest Award.
=20
=20
Entries.
Logs must be received no later than a week after the contest at the =
OZ50MHz Group. Logs received later than that will be used as check logs.

Logs may be submitted electronically to the contest manager, =

oz50mhz@qrz.dk

O. Bj=F8rn Madsen, OZ6OM
Falen 35, 3 tv.
DK-5000 Odense
Denmark
=20

Results.
The contest results can be seen at =
http://www.qsl.net/oz7six/OZ50MHzResults.html

I am looking to take the plunge into the world of Digital. I have had some experience with PACTOR II -> Icom 702 while cruising in the Carib --- but that was just a "plug-and-play" solution for eMail when away from land.

Aside from cost, are there are any major performance / reliability / issues when comparing Sound card VS serial interfaced TNCs for (other than Pactor) digital communications. I don't have any particular area of interest yet ---- just exploring the possibilities. I will be playing around with APRS, HF and VHF packet and anything else that strikes my fancy.

Thanks

greetings

Sorry I am asking a question that might seem very elementary to most of you...

I am in the early stages of building a receiver.. yes I am going to try and reinvent the wheel as most will tell me...

It has been suggested that I use DSP...

I had tried to do some research and find myself, via the internet, somewhat overwelmed...

Does anyone know of some fairly welknown chips that I can investigate that might help me to learn about dsp and how I can incorporate it into my receiver...

Larry ve3fxq

What I would do is serch for a dsp program tat works on a PC Sound card running your speaker output to the mic input. I have read about such programs, but i lack a link right off.

But that would let you play with the stuff and see if it is worth your fooling with it

Hi Larry.

There's a very interesting article in the July 2005 issue of RSGB's
RadCom magazine, by Phil Harman (VK6APH, pvharman@arach.net.au) and
Steve Ireland (VK6VZ, vk6vz@arach.net.au).

The article describes the practicalities of using the KK7P DSP board to
build a 1.8MHz receiver. This may be a good starting point for your
project.

In "Experimental Methods in RF Design" there is a DSP project that might be worth looking at, however, most of the DSP chips are still pretty pricey, and generally only available in hard to work with packages, which means buying demo or experimenter boards that are even more pricey.

A relatively low-cost way of getting into it without going to teeny pin spacing is to look into the dsPIC family from Microchip. In some ways, it is a little bit of a lightweight when it comes to DSP, but some folks, notably Leon Heller, have had some success. You might look for Leon's postings on the microchip DSP forum at http://forum.microchip.com/tt.asp?forumid=153 for a hint at what he has been doing. Unfortunately, there are relatively few programmers for the dsPIC so you either need to build something or buy a programmer from Microchip, still quite a bit cheaper than a DSP board. Building something means building a programmer that includes a PIC, so you need to build a programmer to program that part first! The plain PIC programmer is a pretty quick and simple thing, but it adds yet another step in your way.

> What I would do is serch for a dsp program tat works on a PC Sound card
> running your speaker output to the mic input. I have read about such
> programs, but i lack a link right off.

The problem with that is the sound card manufacturers have gotten pretty tight with their programming specs. I'm afraid you will spend more time working out the sound card interfaces than learning about DSP.

..

Are these things really external sound cards, like the $40 and up ones
from Creative Labs? Or are they simply level converters with the PC
doing the A/D conversion?

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=3701&item=5214705434&rd=1

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=44982&item=5215243659&rd=1

If you want to run more than one sound-card-radio app at a time, you
need more that one sound card. It would be nice if these could do the
job without loading up your mainframe CPU.

>

That's a really big area and rather difficult to answer. Noise reduction is
a very
useful aspect of DSP. Depending on your rig, the filters can be helpful,
too.
As far as outboard DSP, you probably won't go too far wrong with a Timewave
DSP-599zx.
It's expensive, but the noise-reduction components are supposed to be quite
helpful.
A sound-card/computer approach that is very good is an older program known
as
DSP Blaster (db). I have searched high and low for a modern equivalent
software
implementation (something that can run on Windows XP, for example), and I
have
never heard its' equal. It has an agressive noise reduction component and
an coherent
CW filter which is hard to beat. I have found its' noise reduction unit to
be quite useful in EME.
The problem is Brian Beezley, the author, discontinued it. The program can
still be
found by a resourceful individual.

Onboard IF DSP is supposed to be the best - especially when combined with AF
DSP
in the same rig. I don't know which radio has the best perfomance-to-cost
ratio of such
an implementation.

You NEED MONEY. ..LEE THIS AND FOUND THE SOLUCION..

The best fast form to gain money=A1=A1=A1=A1=A1=A1=A1=A1=A1

If really it wants to know if this functions, observes for you same, and alone sees as much as people this doing this. If this does not it convince you, nothing will do him=A1=A1=A1=A1=A1=A1=A1=A1=A1 do not leave to pass this opportunity, I did not believe him but I convinced me and now all my family and friends we are improving ours =A1LIVES=A1 do not have anything that to lose but if a lot that to gain.

Will give you account that is something truly ingenious and that results, he will cause he will gain you a few euro and alone he costs 5 EURO, and that is not swum compared with what would be able to report you if dedicate time and sacrifice.

You WANT TO GAIN MONEY TO PAY YOUR DEBTS? BUYING THAT CAR THAT SO MUCH you LONG FOR?

SPEND 5 MINUTES OF ITS TIME AND EDGE THAT THIS REALLY FUNCTIONS AND ADEMAS IS LEGAL! !!!
Was navigating the groups GOOGLE, YAHOO, ALTAVISTA, ETC. When I saw an I articulate that something said of =A1=A1=A1 to obtain fast money=A1=A1=A1. "Pens=E9..=BF=BFen Internet" ?????

" Good, me I told to my same one, I have to see that type of plan they can present on the Internet". This article described the way to send FOR MAIL 1 BILL OF EURO TO ALONE 5 PEOPLE AND TO GAIN $ 50.000 IN CASH IN 4 WEEKS=A1=A1=A1.

Good, as much as but I thought about this but anxious was. was curious and touched, so I continued reading

After meditating it and to consult it with some people I decided to try it! !!!

Really it is worth so alone 5 euro and 5 postage stamps, I have spent but buying the lottery.
***=
*******************The
$50.000 in cash could be a high point to reach, but was possible. It figure me that perhaps could have a reach of $1.000 but or less, so I did him! !!. As the instructions said in the I Articulate, I sent for mail A SINGLE BILL OF a Euro to each one of the five people of the list that contained the I articulate that I read. I included a small note that said "PLEASE INCLUDE ME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" along with the Euro.

Then I redid the list where I removed al first, I moved an up the position to each one of the remainders and I included my name al final of her. This it was the form to achieve that the money began to arrive me!! Then I took this list that had just modified and PUBLISH it IN ALL THE NEWSGROUPS (Groups of News or Forums of Discussion) AND BBS LOCAL THAT KNEW AND expect that the money began to arrive me, prepared to receive among $1.000 and $1.500 in cash.

But that pleasant surprise when all those envelopes began to arrive me! !!. I knew immediately that they treated when I saw that the directions of return stemmed from all parts of the world, the of the united states majority, Canada and Australia! You story, WAS STIMULANT! !!. As much as I received on the whole?, $.1000? $5.000? NOOO! !!. I received a total of $20.343! It it could not believe!! Perhaps it was possible to achieve $50.000 in cash, it not itself, but DEPENDS COMPLETELY OF YOU,!

You have to continue it and to publish it where be you possible, as much as but be published and but people see it, there will be but possibilities for all to gain but money, this determined as much as arrived you for mail! !!. It is really easy to do it.. We revise the reasons by that to do it: the only expenses are: 5 postage Stamps, 5 envelopes and 5 EURO A EURO for each one in the list, then to publish the I articulate with your name included in ALL THE NEWSGROUPS that occur themselves you this is free and then to expect that the envelopes arrive you.

All we have 5 EURO to spend in an easy investment and that does not wrap any type of effort with A SPECTACULAR Reward FROM AMONG $15.000 AND $25.000 in alone 3 to 5 weeks! So you deprive you to play the lottery today, or better eats at home instead of going outside and invests those 5 EURO in this that can give you a pleasing surprise! !!. There is not forms to lose!! As this it functions exactly? ??, carefully I provide the but detailed and simple instructions of as you are going to obtain that easy money arrive you. You prepare you to achieve it, this is the form..

****
INSTRUCTIONS: STEP 1: Obtains 5 white sheets of paper and writes the

following thing: "PLEASE INCLUDE MY NAME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" OR "PLEASE ADD MY NAME TO YOUR LIST".******

Then, it writes also your name, direction and e-mail (e-mail). And as a pretty detail put also in which POSITION figured each name of the people when you sent your EURO (Ej. : "Were in the position 3" or "You were in slot 3") like to do it but complete. Of that treats, to do money and to pass it well al same time, all with good will.

Now it doubles this page where do writing the previous thing, around the currency of 1 Euro, Ponlo all inside 1 on and you send it to each one of the 5 people listed, the idea to double the role around the Euro is to assure that is going to arrive to its destiny, so that is recommended to wrap all, additionally, in a dark role or of coal so that itself not See bias of the envelope! What these causing is to create a service and as such, does it COMPLETELY LEGAL.

>From now on these sending him A EURO to some person without no motive, these paying A EURO by an I legitimize service, immediately afterwards, sends the 5 envelopes to the following directions:

***=
****

5=2E Pedro Molina,
Avenue Juan 23, numero 9, block 2, entry 1, buzon 30, flat 15, door 2,
C P: 35004, The Palms of G.C. Spain

STEP 2: Listens with care, this is the form of as you are going to receive Money by mail. It looks the list of the FIVE people, erases the name #1 of the upper list, and adds yours al final of her, so the one that was # 2 passes to be # 1 and the one that was # 3 passes to be # 2, the one that was the # 4 passes to be # 3 and YOUR you are now the number 5, includes your name, direction, To. to. (separated air) OR zip code, city, state and country.

And if bros it is but facil for that business about the euro podeis to put it 1 euro al bank for but facility is Box Madrid Company 2038, Office 9009, DC 49, Numero of Account: 3000112505 and another The Caixa Company 2100-Office 1670, DC 07, Numero of account: 0100194308

Now put your I articulate in at least 200 NEWSGROUPS, also called Forums of Discussion or Groups of News exist more than 24.000 groups. Alone you need 200, but as much as but quantity put, but money arrived you. Here they go some indications of as to be introduced in the newsgroups. AS TO HANDLE THE NEWSGROUPS:

In the first place, your do not you need to edit again all this letter. Only put the cursor of the mouse or mouse al start of this letter and drags downward so that all the text remain "sombreado". Later, it

pressures the keys CTRL + C, in this way remains in the memory of your computer. Then, it opens an application preferably Block of Notes (NotePad), Wordpad or MsWord.
Then, once open any of these applications places the cursor al start of a blank leaf and pressures CTRL + V, and already you will have this letter and will be able to add your name and direction in the #5 continuing the instructions of but up. By I finalize keeps this letter with your changes in a new file of the application. IS ALL!

Everything that you have to do now is to put you in different "newsgroups", forums, classified, or announcements free, etc. and to publish it. It recalls that each time that want to cause sufficed with opening the file kept, to copy it and to hit it in the area of message of the newsgroup, or classified, forum or announcement free, etc. To arrive at them in any search engine put these terms: newsgroups, forums of discussion, classified, announcements free or guestbooks; and thousands will appear of paginas.

Do NOT you forget to publish all the announcement or letter but with YOUR NAME in the position 5, disappearing the 1; when already have practices alone took you some 30 seconds by each newsgroup!

AS MANY AS BUT NEWSGROUPS OBTAIN, BUT ANSWERS (AND MONEY) WILL RECEIVE!
BUT you SHOULD ENTER AT LEAST IN 200.**********YA THIS! !...

Your you will be receiving money of the entire world, of places that neither know and in a few days!! **You ASSURE YOU THAT ALL THE DIRECTIONS BE CORRECT**

Now the BECAUSE of all this: of 200 sent announcements, we say that alone receipt 5 answers very low example. Then I did $5.00 with my name in the position #5 of this letter. Now, each one of the 5 people that already they sent me the $1.00 do a minimum of 200 newsgroups, each one with my name in the #4 of the list and alone they respond 5 people to each one of the 5 original,

this does $25.00 but that I receive, now these people put a minimum of 200 newsgroups with my name in #3 place and alone they are received 5 answer of Each one. Would be doing other $125.00 additional. Now this 125 people put a minimum of 200 groups with my name in #2 place and I receive an additional one of $625.00.
OK from here this the part but amusing, each one of the 625 people they put its letters in other 200 groups with my name in the #1 and each one receives alone 5 answers, this does that I receive #3,125.00!!! of an original investment of $5.00 but postage stamps seals.

INCREIBLE!!! and as I said before, that alone 5 people respond is very little, the serious real average of 20-30 people! There that we put these numbers but to calculate. If alone 15 people respond, this does:
In the #5-------$15.00, In the #4------$225.00, In the #3------$3,375.00, In the #2------$50,625.00, In the #1------$759,375.00. IF!!, BUT OF SEVEN HUNDRED FIFTY-NINE THOUSAND

EURO. SIMPLE ESTADISTICA! Once your name no longer this in the list, removes the I finalize announcement of the newsgroup again.

What you should recall he is that thousands of people more, everywhere, they are connected to Internet each I GAVE and they will read these articles every day as your and I we do it. So I believe that nobody would have problems to invest

$5.00 and to see if really he functions. Some people come they think "=BFand if nobody decides to answer me?" THAT! Which is the probability that this even when there are thousands and thousands of honest people that as your and I they seek an extra money to have way... and that are willing to treat, therefore "there is not worse fight than the one that itself is not done". It is estimated that they exist from 20,000 to 50,000 new users ALL you GAVE THEM (everywhere).

ANOTHER SYSTEM TO be COMMUNICATED IS OBTAINING the E-MAIL OF PRIVATE PEOPLE. SHOULD BE AT LEAST 200 DIRECTIONS, AND THIS HAS AN EFFECTIVENESS MINIMA OF THE 5 AL 15%. IF ALONE you SEEK PEOPLE THAT SPEAK ESPANOL, SEES A SUPPLIER OF E-MAIL AND PRINTS A Latin American SURNAME AND ALREADY THIS. Another form is to publish this letter in your PAGINA Web if you have it. ***Recuerda to do this of HONEST, CLEAN, AND CORRECT form and functioned with every security. Only you have to be honest.

Asegurte to print this article NOW, tries to maintain the list of all the ones that send you money and always you set you in the newsgroups and sees if all they are participating cleanly. Recalls, UPRIGHTNESS IS THE BEST METODO.

THE TIME IS IMPORTANT, therefore do not leave to pass but of 7 days of the moment that see this e-mail or announcement. We continue all the rules of the business.

I FINALIZE STEP: AND this is the step that more i like SIMPLY you SIT DOWN AND ENJOYS, BECAUSE =A1=A1=A1=A1 THE CASH COMES ON THE WAY =A1!!!! It expects to see a little bit one of money during the second week, but from the third week, STORM OF ENVELOPES IN YOUR MAIL. Everything that you have to cause is to receive it and tries not to shout very strong, when realize that this time =A1=A1=A1lo achieved! !!!!!

When harm you to remain short of money, revives this file and re-publishes in the same places in which are going to do them now and new places that will know in the future. Always mant=E9n by hand a copy of this article, you REVIVE IT each time that need money.

It IS A TOOL INCREIBLE THAT you CAN USE AGAIN AS MANY TIMES NEED CASH, IS AN EXTRAORDINARY FORM TO SHARE AND IN WHICH we ATTRACT THE ABUNDANCE TO OUR LIVES.

UPRIGHTNESS IS WHAT CAUSES SUCCEEDS TO THIS PROGRAMS. IT do NOT FORGET. =A1=A1=A1BUENA LUCK! !!!

Alone an annotation more, if you know to translate all this message to other languages, are able besides, insert them in forums of different countries as, France, Germany, Russia this I tell it you like counsel to expand the possibilities that see it a lot of but people.

You NEED MONEY. ..LEE THIS AND FOUND THE SOLUCION..

The best fast form to gain money=A1=A1=A1=A1=A1=A1=A1=A1=A1

If really it wants to know if this functions, observes for you same, and alone sees as much as people this doing this. If this does not it convince you, nothing will do him=A1=A1=A1=A1=A1=A1=A1=A1=A1 do not leave to pass this opportunity, I did not believe him but I convinced me and now all my family and friends we are improving ours =A1LIVES=A1 do not have anything that to lose but if a lot that to gain.

Will give you account that is something truly ingenious and that results, he will cause he will gain you a few euro and alone he costs 5 EURO, and that is not swum compared with what would be able to report you if dedicate time and sacrifice.

You WANT TO GAIN MONEY TO PAY YOUR DEBTS? BUYING THAT CAR THAT SO MUCH you LONG FOR?

SPEND 5 MINUTES OF ITS TIME AND EDGE THAT THIS REALLY FUNCTIONS AND ADEMAS IS LEGAL! !!!
Was navigating the groups GOOGLE, YAHOO, ALTAVISTA, ETC. When I saw an I articulate that something said of =A1=A1=A1 to obtain fast money=A1=A1=A1. "Pens=E9..=BF=BFen Internet" ?????

" Good, me I told to my same one, I have to see that type of plan they can present on the Internet". This article described the way to send FOR MAIL 1 BILL OF EURO TO ALONE 5 PEOPLE AND TO GAIN $ 50.000 IN CASH IN 4 WEEKS=A1=A1=A1.

Good, as much as but I thought about this but anxious was. was curious and touched, so I continued reading

After meditating it and to consult it with some people I decided to try it! !!!

Really it is worth so alone 5 euro and 5 postage stamps, I have spent but buying the lottery.
**=
*******************The
$50.000 in cash could be a high point to reach, but was possible. It figure me that perhaps could have a reach of $1.000 but or less, so I did him! !!. As the instructions said in the I Articulate, I sent for mail A SINGLE BILL OF a Euro to each one of the five people of the list that contained the I articulate that I read. I included a small note that said "PLEASE INCLUDE ME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" along with the Euro.
Then I redid the list where I removed al first, I moved an up the position to each one of the remainders and I included my name al final of her. This it was the form to achieve that the money began to arrive me!! Then I took this list that had just modified and PUBLISH it IN ALL THE NEWSGROUPS (Groups of News or Forums of Discussion) AND BBS LOCAL THAT KNEW AND expect that the money began to arrive me, prepared to receive among $1.000 and $1.500 in cash.
But that pleasant surprise when all those envelopes began to arrive me! !!. I knew immediately that they treated when I saw that the directions of return stemmed from all parts of the world, the of the united states majority, Canada and Australia! You story, WAS STIMULANT! !!. As much as I received on the whole?, $.1000? $5.000? NOOO! !!. I received a total of $20.343! It it could not believe!! Perhaps it was possible to achieve $50.000 in cash, it not itself, but

DEPENDS COMPLETELY OF YOU,!

You have to continue it and to publish it where be you possible, as much as but be published and but people see it, there will be but possibilities for all to gain but money, this determined as much as arrived you for mail! !!. It is really easy to do it.. We revise the reasons by that to do it: the only expenses are: 5 postage Stamps, 5 envelopes and 5 EURO A EURO for each one in the list, then to publish the I articulate with your name included in ALL THE NEWSGROUPS that occur themselves you this is free and then to expect that the envelopes arrive you.

All we have 5 EURO to spend in an easy investment and that does not wrap any type of effort with A SPECTACULAR Reward FROM AMONG $15.000 AND $25.000 in alone 3 to 5 weeks! So you deprive you to play the lottery today, or better eats at home instead of going outside and invests those 5 EURO in this that can give you a pleasing surprise! !!. There is not forms to lose!! As this it functions exactly? ??, carefully I provide the but detailed and simple instructions of as you are going to obtain that easy money arrive you. You prepare you to achieve it, this is the form..

****
INSTRUCTIONS: STEP 1: Obtains 5 white sheets of paper and writes the following thing: "PLEASE INCLUDE MY NAME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" OR "PLEASE ADD MY NAME TO YOUR LIST".******

Then, it writes also your name, direction and e-mail (e-mail). And as a pretty detail put also in which POSITION figured each name of the people when you sent your EURO (Ej. : "Were in the position 3" or "You were in slot 3") like to do it but complete. Of that treats, to do money and to pass it well al same time, all with good will.

Now it doubles this page where do writing the previous thing, around the currency of 1 Euro, Ponlo all inside 1 on and you send it to each one of the 5 people listed, the idea to double the role around the Euro is to assure that is going to arrive to its destiny, so that is recommended to wrap all, additionally, in a dark role or of coal so that itself not See bias of the envelope! What these causing is to create a service and as such, does it COMPLETELY LEGAL.

>From now on these sending him A EURO to some person without no motive, these paying A EURO by an I legitimize service, immediately afterwards, sends the 5 envelopes to the following directions:

**=
****

1=2E Wilson X. Orbea B., University Avenue 550 and 18 of September Building VIPA, Of. 102, Quito =C2&#150; Pichincha =C2&#150; Equator.

2=2E CONCEICAO Quintal: Av. San Sebasti=E1n, Residences The Stay B, Apartment 1, Baruta, State Miranda, Venezuela, zip Code 1080.

3=2E Lu=EDs Alberto Povis Entry, Street San Judas Tadeo 534 =C2&#150; San Antonio; HUANCAYO - PERU.

4=2E Diana Triana, Ibagu=E9 &#150; Tolima, Air Section: TO.TO. 03 Colombia_

5=2E Pedro Molina,
Avenue Juan 23, numero 9, block 2, entry 1, buzon 30, flat 15, door 2,
C P: 35004, The Palms of G.C. Spain

STEP 2: Listens with care, this is the form of as you are going to receive Money by mail. It looks the list of the FIVE people, erases the name #1 of the upper list, and adds yours al final of her, so the one that was # 2 passes to be # 1 and the one that was # 3 passes to be # 2, the one that was the # 4 passes to be # 3 and YOUR you are now the number 5, includes your name, direction, To. to. (separated air) OR zip code, city, state and country.
And if bros it is but facil for that business about the euro podeis to put it 1 euro al bank for but facility is Box Madrid Company 2038, Office 9009, DC 49, Numero of Account: 3000112505 and another The Caixa Company 2100-Office 1670, DC 07, Numero of account: 0100194308

Now put your I articulate in at least 200 NEWSGROUPS, also called Forums of Discussion or Groups of News exist more than 24.000 groups. Alone you need 200, but as much as but quantity put, but money arrived you. Here they go some indications of as to be introduced in the newsgroups. AS TO HANDLE THE NEWSGROUPS:

In the first place, your do not you need to edit again all this letter. Only put the cursor of the mouse or mouse al start of this letter and drags downward so that all the text remain "sombreado". Later, it pressures the keys CTRL + C, in this way remains in the memory of your computer. Then, it opens an application preferably Block of Notes (NotePad), Wordpad or MsWord.
Then, once open any of these applications places the cursor al start of a blank leaf and pressures CTRL + V, and already you will have this letter and will be able to add your name and direction in the #5 continuing the instructions of but up. By I finalize keeps this letter with your changes in a new file of the application. IS ALL!

Everything that you have to do now is to put you in different "newsgroups", forums, classified, or announcements free, etc. and to publish it. It recalls that each time that want to cause sufficed with opening the file kept, to copy it and to hit it in the area of message of the newsgroup, or classified, forum or announcement free, etc. To arrive at them in any search engine put these terms: newsgroups, forums of discussion, classified, announcements free or guestbooks; and thousands will appear of paginas.

Do NOT you forget to publish all the announcement or letter but with YOUR NAME in the position 5, disappearing the 1; when already have practices alone took you some 30 seconds by each newsgroup!

AS MANY AS BUT NEWSGROUPS OBTAIN, BUT ANSWERS (AND MONEY) WILL RECEIVE! BUT you SHOULD ENTER AT LEAST IN 200.**********YA THIS! !...

Your you will be receiving money of the entire world, of places that neither know and in a few days!! **You ASSURE YOU THAT ALL THE DIRECTIONS BE CORRECT**

Now the BECAUSE of all this: of 200 sent announcements, we say that alone receipt 5 answers very low example. Then I did $5.00 with my name in the position #5 of this letter. Now, each one of the 5 people that already they sent me the $1.00 do a minimum of 200 newsgroups, each one with my name in the #4 of the list and alone they respond 5 people to each one of the 5 original,

this does $25.00 but that I receive, now these people put a minimum of 200 newsgroups with my name in #3 place and alone they are received 5 answer of Each one. Would be doing other $125.00 additional. Now this 125 people put a minimum of 200 groups with my name in #2 place and I receive an additional one of $625.00.
OK from here this the part but amusing, each one of the 625 people they put its letters in other 200 groups with my name in the #1 and each one receives alone 5 answers, this does that I receive #3,125.00!!! of an original investment of $5.00 but postage stamps seals.

INCREIBLE!!! and as I said before, that alone 5 people respond is very little, the serious real average of 20-30 people! There that we put these numbers but to calculate. If alone 15 people respond, this does: In the #5-------$15.00, In the #4------$225.00, In the #3------$3,375.00, In the #2------$50,625.00, In the #1------$759,375.00. IF!!, BUT OF SEVEN HUNDRED FIFTY-NINE THOUSAND EURO. SIMPLE ESTADISTICA! Once your name no longer this in the list, removes the I finalize announcement of the newsgroup again.
What you should recall he is that thousands of people more, everywhere, they are connected to Internet each I GAVE and they will read these articles every day as your and I we do it. So I believe that nobody would have problems to invest

$5.00 and to see if really he functions. Some people come they think "=BFand if nobody decides to answer me?" THAT! Which is the probability that this even when there are thousands and thousands of honest people that as your and I they seek an extra money to have way... and that are willing to treat, therefore "there is not worse fight than the one that itself is not done". It is estimated that they exist from 20,000 to 50,000 new users ALL you GAVE THEM (everywhere).
ANOTHER SYSTEM TO be COMMUNICATED IS OBTAINING the E-MAIL OF PRIVATE PEOPLE. SHOULD BE AT LEAST 200 DIRECTIONS, AND THIS HAS AN EFFECTIVENESS MINIMA OF THE 5 AL 15%. IF ALONE you SEEK PEOPLE THAT SPEAK ESPANOL, SEES A SUPPLIER OF E-MAIL AND PRINTS A Latin American SURNAME AND
ALREADY THIS. Another form is to publish this letter in your PAGINA Web if you have it. ***Recuerda to do this of HONEST, CLEAN, AND CORRECT form and functioned with every security. Only you have to be honest.
Asegurte to print this article NOW, tries to maintain the list of all the ones that send you money and always you set you in the newsgroups and sees if all they are participating cleanly. Recalls, UPRIGHTNESS IS THE BEST METODO.

THE TIME IS IMPORTANT, therefore do not leave to pass but of 7 days of the moment that see this e-mail or announcement. We continue all the rules of the business.

I FINALIZE STEP: AND this is the step that more i like SIMPLY you SIT DOWN AND ENJOYS, BECAUSE =A1=A1=A1=A1 THE CASH COMES ON THE WAY =A1!!!! It expects to see a little bit one of money during the second week, but from the third week, STORM OF ENVELOPES IN YOUR MAIL. Everything that you have to cause is to receive it and tries not to shout very strong, when realize that this time =A1=A1=A1lo achieved! !!!!!

When harm you to remain short of money, revives this file and re-publishes in the same places in which are going to do them now and new places that will know in the future. Always mant=E9n by hand a copy of this article, you REVIVE IT each time that need money.

It IS A TOOL INCREIBLE THAT you CAN USE AGAIN AS MANY TIMES NEED CASH, IS AN EXTRAORDINARY FORM TO SHARE AND IN WHICH we ATTRACT THE ABUNDANCE TO OUR LIVES.

UPRIGHTNESS IS WHAT CAUSES SUCCEEDS TO THIS PROGRAMS. IT do NOT FORGET. =A1=A1=A1BUENA LUCK! !!!

Alone an annotation more, if you know to translate all this message to other languages, are able besides, insert them in forums of different countries as, France, Germany, Russia this I tell it you like counsel to expand the possibilities that see it a lot of but people.

But that pleasant surprise when all those envelopes began to arrive me! !!. I knew immediately that they treated when I saw that the directions of return stemmed from all parts of the world, the of the united states majority, Canada and Australia! You story, WAS STIMULANT! !!. As much as I received on the whole?, $.1000? $5.000? NOOO! !!. I received a total of $20.343! It it could not believe!! Perhaps it was possible to achieve $50.000 in cash, it not itself, but DEPENDS COMPLETELY OF YOU,!

You have to continue it and to publish it where be you possible, as much as but be published and but people see it, there will be but possibilities for all to gain but money, this determined as much as arrived you for mail! !!. It is really easy to do it.. We revise the reasons by that to do it: the only expenses are: 5 postage Stamps, 5 envelopes and 5 EURO A EURO for each one in the list, then to publish the I articulate with your name included in ALL THE NEWSGROUPS that occur themselves you this is free and then to expect that the envelopes arrive you.

All we have 5 EURO to spend in an easy investment and that does not wrap any type of effort with A SPECTACULAR Reward FROM AMONG $15.000 AND $25.000 in alone 3 to 5 weeks! So you deprive you to play the lottery today, or better eats at home instead of going outside and invests those 5 EURO in this that can give you a pleasing surprise! !!. There is not forms to lose!! As this it functions exactly? ??, carefully I provide the but detailed and simple instructions of as you are going to obtain that easy money arrive you. You prepare you to achieve it, this is the form..

****
INSTRUCTIONS: STEP 1: Obtains 5 white sheets of paper and writes the following thing: "PLEASE INCLUDE MY NAME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" OR "PLEASE ADD MY NAME TO YOUR LIST".******

Then, it writes also your name, direction and e-mail (e-mail). And as a pretty detail put also in which POSITION figured each name of the people when you sent your EURO (Ej. : "Were in the position 3" or "You were in slot 3") like to do it but complete. Of that treats, to do money and to pass it well al same time, all with good will.

Now it doubles this page where do writing the previous thing, around

the currency of 1 Euro, Ponlo all inside 1 on and you send it to each one of the 5 people listed, the idea to double the role around the Euro is to assure that is going to arrive to its destiny, so that is recommended to wrap all, additionally, in a dark role or of coal so that itself not See bias of the envelope! What these causing is to create a service and as such, does it COMPLETELY LEGAL.
>From now on these sending him A EURO to some person without no motive, these paying A EURO by an I legitimize service, immediately afterwards, sends the 5 envelopes to the following directions:
***=
****
1=2E Wilson X. Orbea B., University Avenue 550 and 18 of September
Building VIPA, Of. 102, Quito =C2&#150; Pichincha =C2&#150; Equator.
2=2E CONCEICAO Quintal: Av. San Sebasti=E1n, Residences The Stay B,
Apartment 1, Baruta, State Miranda, Venezuela, zip Code 1080.
3=2E Lu=EDs Alberto Povis Entry, Street San Judas Tadeo 534 =C2&#150; San
Antonio; HUANCAYO - PERU.
4=2E Diana Triana, Ibagu=E9 &#150; Tolima, Air Section: TO.TO. 03
Colombia_
5=2E Pedro Molina,
Avenue Juan 23, numero 9, block 2, entry 1, buzon 30, flat 15, door 2,
C P: 35004, The Palms of G.C. Spain

STEP 2: Listens with care, this is the form of as you are going to receive Money by mail. It looks the list of the FIVE people, erases the name #1 of the upper list, and adds yours al final of her, so the one that was # 2 passes to be # 1 and the one that was # 3 passes to be # 2, the one that was the # 4 passes to be # 3 and YOUR you are now the number 5, includes your name, direction, To. to. (separated air) OR zip code, city, state and country.
And if bros it is but facil for that business about the euro podeis to put it 1 euro al bank for but facility is Box Madrid Company 2038, Office 9009, DC 49, Numero of Account: 3000112505 and another The Caixa Company 2100-Office 1670, DC 07, Numero of account: 0100194308

Now put your I articulate in at least 200 NEWSGROUPS, also called Forums of Discussion or Groups of News exist more than 24.000 groups. Alone you need 200, but as much as but quantity put, but money arrived you. Here they go some indications of as to be introduced in the newsgroups. AS TO HANDLE THE NEWSGROUPS:

In the first place, your do not you need to edit again all this letter. Only put the cursor of the mouse or mouse al start of this letter and drags downward so that all the text remain "sombreado". Later, it pressures the keys CTRL + C, in this way remains in the memory of your computer. Then, it opens an application preferably Block of Notes (NotePad), Wordpad or MsWord.
Then, once open any of these applications places the cursor al start of a blank leaf and pressures CTRL + V, and already you will have this letter and will be able to add your name and direction in the #5 continuing the instructions of but up. By I finalize keeps this letter with your changes in a new file of the application. IS ALL!

Everything that you have to do now is to put you in different "newsgroups", forums, classified, or announcements free, etc. and to publish it. It recalls that each time that want to cause sufficed with opening the file kept, to copy it and to hit it in the area of message of the newsgroup, or classified, forum or announcement free, etc. To arrive at them in any search engine put these terms: newsgroups, forums of discussion, classified, announcements free or guestbooks; and thousands will appear of paginas.

Do NOT you forget to publish all the announcement or letter but with YOUR NAME in the position 5, disappearing the 1; when already have practices alone took you some 30 seconds by each newsgroup!

AS MANY AS BUT NEWSGROUPS OBTAIN, BUT ANSWERS (AND MONEY) WILL RECEIVE! BUT you SHOULD ENTER AT LEAST IN 200.**********YA THIS! !...

Your you will be receiving money of the entire world, of places that neither know and in a few days!! **You ASSURE YOU THAT ALL THE DIRECTIONS BE CORRECT**

Now the BECAUSE of all this: of 200 sent announcements, we say that alone receipt 5 answers very low example. Then I did $5.00 with my name in the position #5 of this letter. Now, each one of the 5 people that already they sent me the $1.00 do a minimum of 200 newsgroups, each one with my name in the #4 of the list and alone they respond 5 people to each one of the 5 original,

this does $25.00 but that I receive, now these people put a minimum of 200 newsgroups with my name in #3 place and alone they are received 5 answer of Each one. Would be doing other $125.00 additional. Now this 125 people put a minimum of 200 groups with my name in #2 place and I receive an additional one of $625.00.
OK from here this the part but amusing, each one of the 625 people they put its letters in other 200 groups with my name in the #1 and each one receives alone 5 answers, this does that I receive #3,125.00!!! of an original investment of $5.00 but postage stamps seals.

INCREIBLE!!! and as I said before, that alone 5 people respond is very little, the serious real average of 20-30 people! There that we put these numbers but to calculate. If alone 15 people respond, this does: In the #5-------$15.00, In the #4------$225.00, In the #3------$3,375.00, In the #2------$50,625.00, In the #1------$759,375.00. IF!!, BUT OF SEVEN HUNDRED FIFTY-NINE THOUSAND EURO. SIMPLE ESTADISTICA! Once your name no longer this in the list, removes the I finalize announcement of the newsgroup again.
What you should recall he is that thousands of people more, everywhere, they are connected to Internet each I GAVE and they will read these articles every day as your and I we do it. So I believe that nobody would have problems to invest

$5.00 and to see if really he functions. Some people come they think "=BFand if nobody decides to answer me?" THAT! Which is the probability that this even when there are thousands and thousands of honest people that as your and I they seek an extra money to have way... and that are willing to treat, therefore "there is not worse fight than the one that itself is not done". It is estimated that they exist from 20,000 to 50,000 new users ALL you GAVE THEM (everywhere). ANOTHER SYSTEM TO be COMMUNICATED IS OBTAINING the E-MAIL OF PRIVATE PEOPLE. SHOULD BE AT LEAST 200 DIRECTIONS, AND THIS HAS AN EFFECTIVENESS MINIMA OF THE 5 AL 15%. IF ALONE you SEEK PEOPLE THAT SPEAK ESPANOL, SEES A SUPPLIER OF E-MAIL AND PRINTS A Latin American SURNAME AND ALREADY THIS. Another form is to publish this letter in your PAGINA Web if you have it. ***Recuerda to do this of HONEST, CLEAN, AND CORRECT form and functioned with every security. Only you have to be honest. Asegurte to print this article NOW, tries to maintain the list of all the ones that send you money and always you set you in the newsgroups and sees if all they are participating cleanly. Recalls, UPRIGHTNESS IS THE BEST METODO.

THE TIME IS IMPORTANT, therefore do not leave to pass but of 7 days of the moment that see this e-mail or announcement. We continue all the rules of the business.

I FINALIZE STEP: AND this is the step that more i like SIMPLY you SIT DOWN AND ENJOYS, BECAUSE =A1=A1=A1=A1 THE CASH COMES ON THE WAY =A1!!!! It expects to see a little bit one of money during the second week, but from the third week, STORM OF ENVELOPES IN YOUR MAIL. Everything that you have to cause is to receive it and tries not to shout very strong, when realize that this time =A1=A1=A1lo achieved! !!!!!

When harm you to remain short of money, revives this file and re-publishes in the same places in which are going to do them now and new places that will know in the future. Always mant=E9n by hand a copy of this article, you REVIVE IT each time that need money.

It IS A TOOL INCREIBLE THAT you CAN USE AGAIN AS MANY TIMES NEED CASH, IS AN EXTRAORDINARY FORM TO SHARE AND IN WHICH we ATTRACT THE ABUNDANCE TO OUR LIVES.

UPRIGHTNESS IS WHAT CAUSES SUCCEEDS TO THIS PROGRAMS. IT do NOT FORGET. =A1=A1=A1BUENA LUCK! !!!

Alone an annotation more, if you know to translate all this message to other languages, are able besides, insert them in forums of different countries as, France, Germany, Russia this I tell it you like counsel to expand the possibilities that see it a lot of but people.

You NEED MONEY. ..LEE THIS AND FOUND THE SOLUCION..

The best fast form to gain money=A1=A1=A1=A1=A1=A1=A1=A1=A1

If really it wants to know if this functions, observes for you same,
and alone sees as much as people this doing this. If this does not it
convince you, nothing will do him=A1=A1=A1=A1=A1=A1=A1=A1=A1 do not leave to
pass this opportunity, I did not believe him but I convinced me and now
all my family and friends we are improving ours =A1LIVES=A1 do not have
anything that to lose but if a lot that to gain.

Will give you account that is something truly ingenious and that
results, he will cause he will gain you a few euro and alone he costs 5
EURO, and that is not swum compared with what would be able to report
you if dedicate time and sacrifice.

You WANT TO GAIN MONEY TO PAY YOUR DEBTS? BUYING THAT CAR THAT SO MUCH you LONG FOR?

SPEND 5 MINUTES OF ITS TIME AND EDGE THAT THIS REALLY FUNCTIONS AND ADEMAS IS LEGAL! !!!

Was navigating the groups GOOGLE, YAHOO, ALTAVISTA, ETC. When I saw an I articulate that something said of =A1=A1=A1 to obtain fast money=A1=A1=A1. "Pens=E9..=BF=BFen Internet" ?????

" Good, me I told to my same one, I have to see that type of plan they can present on the Internet". This article described the way to send FOR MAIL 1 BILL OF EURO TO ALONE 5 PEOPLE AND TO GAIN $ 50.000 IN CASH IN 4 WEEKS=A1=A1=A1.

Good, as much as but I thought about this but anxious was. was curious and touched, so I continued reading

After meditating it and to consult it with some people I decided to try it! !!!

Really it is worth so alone 5 euro and 5 postage stamps, I have spent but buying the lottery.

**=
*******************The

$50.000 in cash could be a high point to reach, but was possible. It figure me that perhaps could have a reach of $1.000 but or less, so I did him! !!. As the instructions said in the I Articulate, I sent for mail A SINGLE BILL OF a Euro to each one of the five people of the list that contained the I articulate that I read. I included a small note that said "PLEASE INCLUDE ME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" along with the Euro.

Then I redid the list where I removed al first, I moved an up the position to each one of the remainders and I included my name al final of her. This it was the form to achieve that the money began to arrive me!! Then I took this list that had just modified and PUBLISH it IN ALL THE NEWSGROUPS (Groups of News or Forums of Discussion) AND BBS LOCAL THAT KNEW AND expect that the money began to arrive me, prepared to receive among $1.000 and $1.500 in cash.

But that pleasant surprise when all those envelopes began to arrive me! !!. I knew immediately that they treated when I saw that the directions of return stemmed from all parts of the world, the of the united states majority, Canada and Australia! You story, WAS STIMULANT! !!. As much as I received on the whole?, $.1000? $5.000? NOOO! !!. I received a total of $20.343! It it could not believe!! Perhaps it was possible to achieve $50.000 in cash, it not itself, but DEPENDS COMPLETELY OF YOU,!

You have to continue it and to publish it where be you possible, as much as but be published and but people see it, there will be but possibilities for all to gain but money, this determined as much as arrived you for mail! !!. It is really easy to do it.. We revise the reasons by that to do it: the only expenses are: 5 postage Stamps, 5 envelopes and 5 EURO A EURO for each one in the list, then to publish the I articulate with your name included in ALL THE NEWSGROUPS that occur themselves you this is free and then to expect that the envelopes

arrive you.
All we have 5 EURO to spend in an easy investment and that does not wrap any type of effort with A SPECTACULAR Reward FROM AMONG $15.000 AND $25.000 in alone 3 to 5 weeks! So you deprive you to play the lottery today, or better eats at home instead of going outside and invests those 5 EURO in this that can give you a pleasing surprise! !!.
 There is not forms to lose!! As this it functions exactly? ??, carefully I provide the but detailed and simple instructions of as you are going to obtain that easy money arrive you. You prepare you to achieve it, this is the form..

****
INSTRUCTIONS: STEP 1: Obtains 5 white sheets of paper and writes the following thing: "PLEASE INCLUDE MY NAME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" OR "PLEASE ADD MY NAME TO YOUR LIST".******

Then, it writes also your name, direction and e-mail (e-mail). And as a pretty detail put also in which POSITION figured each name of the people when you sent your EURO (Ej. : "Were in the position 3" or "You were in slot 3") like to do it but complete. Of that treats, to do money and to pass it well al same time, all with good will.
Now it doubles this page where do writing the previous thing, around the currency of 1 Euro, Ponlo all inside 1 on and you send it to each one of the 5 people listed, the idea to double the role around the Euro is to assure that is going to arrive to its destiny, so that is recommended to wrap all, additionally, in a dark role or of coal so that itself not See bias of the envelope! What these causing is to create a service and as such, does it COMPLETELY LEGAL.
>From now on these sending him A EURO to some person without no motive, these paying A EURO by an I legitimize service, immediately afterwards, sends the 5 envelopes to the following directions:
***=
****
1=2E Wilson X. Orbea B., University Avenue 550 and 18 of September Building VIPA, Of. 102, Quito =C2&#150; Pichincha =C2&#150; Equator.
2=2E CONCEICAO Quintal: Av. San Sebasti=E1n, Residences The Stay B, Apartment 1, Baruta, State Miranda, Venezuela, zip Code 1080.
3=2E Lu=EDs Alberto Povis Entry, Street San Judas Tadeo 534 =C2&#150; San Antonio; HUANCAYO - PERU.
4=2E Diana Triana, Ibagu=E9 &#150; Tolima, Air Section: TO.TO. 03 Colombia_
5=2E Pedro Molina,
Avenue Juan 23, numero 9, block 2, entry 1, buzon 30, flat 15, door 2,
C P: 35004, The Palms of G.C. Spain

STEP 2: Listens with care, this is the form of as you are going to receive Money by mail. It looks the list of the FIVE people, erases the name #1 of the upper list, and adds yours al final of her, so the one that was # 2 passes to be # 1 and the one that was # 3 passes to be # 2, the one that was the # 4 passes to be # 3 and YOUR you are now the number 5, includes your name, direction, To. to. (separated air) OR zip code, city, state and country.
And if bros it is but facil for that business about the euro podeis to

put it 1 euro al bank for but facility is Box Madrid Company 2038, Office 9009, DC 49, Numero of Account: 3000112505 and another The Caixa Company 2100-Office 1670, DC 07, Numero of account: 0100194308

Now put your I articulate in at least 200 NEWSGROUPS, also called Forums of Discussion or Groups of News exist more than 24.000 groups. Alone you need 200, but as much as but quantity put, but money arrived you. Here they go some indications of as to be introduced in the newsgroups. AS TO HANDLE THE NEWSGROUPS:

In the first place, your do not you need to edit again all this letter. Only put the cursor of the mouse or mouse al start of this letter and drags downward so that all the text remain "sombreado". Later, it pressures the keys CTRL + C, in this way remains in the memory of your computer. Then, it opens an application preferably Block of Notes (NotePad), Wordpad or MsWord.
Then, once open any of these applications places the cursor al start of a blank leaf and pressures CTRL + V, and already you will have this letter and will be able to add your name and direction in the #5 continuing the instructions of but up. By I finalize keeps this letter with your changes in a new file of the application. IS ALL!

Everything that you have to do now is to put you in different "newsgroups", forums, classified, or announcements free, etc. and to publish it. It recalls that each time that want to cause sufficed with opening the file kept, to copy it and to hit it in the area of message of the newsgroup, or classified, forum or announcement free, etc. To arrive at them in any search engine put these terms: newsgroups, forums of discussion, classified, announcements free or guestbooks; and thousands will appear of paginas.

Do NOT you forget to publish all the announcement or letter but with YOUR NAME in the position 5, disappearing the 1; when already have practices alone took you some 30 seconds by each newsgroup!

AS MANY AS BUT NEWSGROUPS OBTAIN, BUT ANSWERS (AND MONEY) WILL RECEIVE! BUT you SHOULD ENTER AT LEAST IN 200.**********YA THIS! !...

Your you will be receiving money of the entire world, of places that neither know and in a few days!! **You ASSURE YOU THAT ALL THE DIRECTIONS BE CORRECT**

Now the BECAUSE of all this: of 200 sent announcements, we say that alone receipt 5 answers very low example. Then I did $5.00 with my name in the position #5 of this letter. Now, each one of the 5 people that already they sent me the $1.00 do a minimum of 200 newsgroups, each one with my name in the #4 of the list and alone they respond 5 people to each one of the 5 original,

this does $25.00 but that I receive, now these people put a minimum of 200 newsgroups with my name in #3 place and alone they are received 5 answer of Each one. Would be doing other $125.00 additional. Now this 125 people put a minimum of 200 groups with my name in #2 place and I

receive an additional one of $625.00.
OK from here this the part but amusing, each one of the 625 people they put its letters in other 200 groups with my name in the #1 and each one receives alone 5 answers, this does that I receive #3,125.00!!! of an original investment of $5.00 but postage stamps seals.

INCREIBLE!!! and as I said before, that alone 5 people respond is very little, the serious real average of 20-30 people! There that we put these numbers but to calculate. If alone 15 people respond, this does: In the #5-------$15.00, In the #4------$225.00, In the #3------$3,375.00, In the #2------$50,625.00, In the #1------$759,375.00. IF!!, BUT OF SEVEN HUNDRED FIFTY-NINE THOUSAND EURO. SIMPLE ESTADISTICA! Once your name no longer this in the list, removes the I finalize announcement of the newsgroup again.
What you should recall he is that thousands of people more, everywhere, they are connected to Internet each I GAVE and they will read these articles every day as your and I we do it. So I believe that nobody would have problems to invest

$5.00 and to see if really he functions. Some people come they think "=BFand if nobody decides to answer me?" THAT! Which is the probability that this even when there are thousands and thousands of honest people that as your and I they seek an extra money to have way... and that are willing to treat, therefore "there is not worse fight than the one that itself is not done". It is estimated that they exist from 20,000 to 50,000 new users ALL you GAVE THEM (everywhere).
ANOTHER SYSTEM TO be COMMUNICATED IS OBTAINING the E-MAIL OF PRIVATE PEOPLE. SHOULD BE AT LEAST 200 DIRECTIONS, AND THIS HAS AN EFFECTIVENESS MINIMA OF THE 5 AL 15%. IF ALONE you SEEK PEOPLE THAT SPEAK ESPANOL, SEES A SUPPLIER OF E-MAIL AND PRINTS A Latin American SURNAME AND
ALREADY THIS. Another form is to publish this letter in your PAGINA Web if you have it. ***Recuerda to do this of HONEST, CLEAN, AND CORRECT form and functioned with every security. Only you have to be honest.
Asegurte to print this article NOW, tries to maintain the list of all the ones that send you money and always you set you in the newsgroups and sees if all they are participating cleanly. Recalls, UPRIGHTNESS IS THE BEST METODO.

THE TIME IS IMPORTANT, therefore do not leave to pass but of 7 days of the moment that see this e-mail or announcement. We continue all the rules of the business.

I FINALIZE STEP: AND this is the step that more i like SIMPLY you SIT DOWN AND ENJOYS, BECAUSE =A1=A1=A1=A1 THE CASH COMES ON THE WAY =A1!!!! It expects to see a little bit one of money during the second week, but from the third week, STORM OF ENVELOPES IN YOUR MAIL. Everything that you have to cause is to receive it and tries not to shout very strong, when realize that this time =A1=A1=A1lo achieved! !!!!!

When harm you to remain short of money, revives this file and re-publishes in the same places in which are going to do them now and new places that will know in the future. Always mant=E9n by hand a copy of this article, you REVIVE IT each time that need money.

It IS A TOOL INCREIBLE THAT you CAN USE AGAIN AS MANY TIMES NEED CASH, IS AN EXTRAORDINARY FORM TO SHARE AND IN WHICH we ATTRACT THE ABUNDANCE TO OUR LIVES.

UPRIGHTNESS IS WHAT CAUSES SUCCEEDS TO THIS PROGRAMS. IT do NOT FORGET. =A1=A1=A1BUENA LUCK! !!!

Alone an annotation more, if you know to translate all this message to other languages, are able besides, insert them in forums of different countries as, France, Germany, Russia this I tell it you like counsel to expand the possibilities that see it a lot of but people.

You NEED MONEY. ..LEE THIS AND FOUND THE SOLUCION..

The best fast form to gain money=A1=A1=A1=A1=A1=A1=A1=A1=A1

If really it wants to know if this functions, observes for you same, and alone sees as much as people this doing this. If this does not it convince you, nothing will do him=A1=A1=A1=A1=A1=A1=A1=A1=A1 do not leave to pass this opportunity, I did not believe him but I convinced me and now all my family and friends we are improving ours =A1LIVES=A1 do not have anything that to lose but if a lot that to gain.

Will give you account that is something truly ingenious and that results, he will cause he will gain you a few euro and alone he costs 5 EURO, and that is not swum compared with what would be able to report you if dedicate time and sacrifice.

You WANT TO GAIN MONEY TO PAY YOUR DEBTS? BUYING THAT CAR THAT SO MUCH you LONG FOR?

SPEND 5 MINUTES OF ITS TIME AND EDGE THAT THIS REALLY FUNCTIONS AND ADEMAS IS LEGAL! !!!
Was navigating the groups GOOGLE, YAHOO, ALTAVISTA, ETC. When I saw an I articulate that something said of =A1=A1=A1 to obtain fast money=A1=A1=A1. "Pens=E9..=BF=BFen Internet" ?????

" Good, me I told to my same one, I have to see that type of plan they can present on the Internet". This article described the way to send FOR MAIL 1 BILL OF EURO TO ALONE 5 PEOPLE AND TO GAIN $ 50.000 IN CASH IN 4 WEEKS=A1=A1=A1.

Good, as much as but I thought about this but anxious was. was curious and touched, so I continued reading

After meditating it and to consult it with some people I decided to try it! !!!

Really it is worth so alone 5 euro and 5 postage stamps, I have spent but buying the lottery.
**=
*******************The
$50.000 in cash could be a high point to reach, but was possible. It figure me that perhaps could have a reach of $1.000 but or less, so I did him! !!. As the instructions said in the I Articulate, I sent for mail A SINGLE BILL OF a Euro to each one of the five people of the list that contained the I articulate that I read. I included a small note that said "PLEASE INCLUDE ME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" along with the Euro.
  Then I redid the list where I removed al first, I moved an up the position to each one of the remainders and I included my name al final

of her. This it was the form to achieve that the money began to arrive me!! Then I took this list that had just modified and PUBLISH it IN ALL THE NEWSGROUPS (Groups of News or Forums of Discussion) AND BBS LOCAL THAT KNEW AND expect that the money began to arrive me, prepared to receive among $1.000 and $1.500 in cash.

But that pleasant surprise when all those envelopes began to arrive me! !!. I knew immediately that they treated when I saw that the directions of return stemmed from all parts of the world, the of the united states majority, Canada and Australia! You story, WAS STIMULANT! !!. As much as I received on the whole?, $.1000? $5.000? NOOO! !!. I received a total of $20.343! It it could not believe!! Perhaps it was possible to achieve $50.000 in cash, it not itself, but DEPENDS COMPLETELY OF YOU,!

You have to continue it and to publish it where be you possible, as much as but be published and but people see it, there will be but possibilities for all to gain but money, this determined as much as arrived you for mail! !!. It is really easy to do it.. We revise the reasons by that to do it: the only expenses are: 5 postage Stamps, 5 envelopes and 5 EURO A EURO for each one in the list, then to publish the I articulate with your name included in ALL THE NEWSGROUPS that occur themselves you this is free and then to expect that the envelopes arrive you.

All we have 5 EURO to spend in an easy investment and that does not wrap any type of effort with A SPECTACULAR Reward FROM AMONG $15.000 AND $25.000 in alone 3 to 5 weeks! So you deprive you to play the lottery today, or better eats at home instead of going outside and invests those 5 EURO in this that can give you a pleasing surprise! !!. There is not forms to lose!! As this it functions exactly? ??, carefully I provide the but detailed and simple instructions of as you are going to obtain that easy money arrive you. You prepare you to achieve it, this is the form..

****

INSTRUCTIONS: STEP 1: Obtains 5 white sheets of paper and writes the following thing: "PLEASE INCLUDE MY NAME IN ITS LIST OF CORRESPONDENCE OR E-MAIL" OR "PLEASE ADD MY NAME TO YOUR LIST".******

Then, it writes also your name, direction and e-mail (e-mail). And as a pretty detail put also in which POSITION figured each name of the people when you sent your EURO (Ej. : "Were in the position 3" or "You were in slot 3") like to do it but complete. Of that treats, to do money and to pass it well al same time, all with good will.

Now it doubles this page where do writing the previous thing, around the currency of 1 Euro, Ponlo all inside 1 on and you send it to each one of the 5 people listed, the idea to double the role around the Euro is to assure that is going to arrive to its destiny, so that is recommended to wrap all, additionally, in a dark role or of coal so that itself not See bias of the envelope! What these causing is to create a service and as such, does it COMPLETELY LEGAL.

>From now on these sending him A EURO to some person without no motive, these paying A EURO by an I legitimize service, immediately afterwards, sends the 5 envelopes to the following directions:

***=

****
1=2E Wilson X. Orbea B., University Avenue 550 and 18 of September Building VIPA, Of. 102, Quito =C2&#150; Pichincha =C2&#150; Equator.
2=2E CONCEICAO Quintal: Av. San Sebasti=E1n, Residences The Stay B, Apartment 1, Baruta, State Miranda, Venezuela, zip Code 1080.
3=2E Lu=EDs Alberto Povis Entry, Street San Judas Tadeo 534 =C2&#150; San Antonio; HUANCAYO - PERU.
4=2E Diana Triana, Ibagu=E9 &#150; Tolima, Air Section: TO.TO. 03 Colombia_
5=2E Pedro Molina,
Avenue Juan 23, numero 9, block 2, entry 1, buzon 30, flat 15, door 2,
C P: 35004, The Palms of G.C. Spain

STEP 2: Listens with care, this is the form of as you are going to receive Money by mail. It looks the list of the FIVE people, erases the name #1 of the upper list, and adds yours al final of her, so the one that was # 2 passes to be # 1 and the one that was # 3 passes to be # 2, the one that was the # 4 passes to be # 3 and YOUR you are now the number 5, includes your name, direction, To. to. (separated air) OR zip code, city, state and country.
And if bros it is but facil for that business about the euro podeis to put it 1 euro al bank for but facility is Box Madrid Company 2038, Office 9009, DC 49, Numero of Account: 3000112505 and another The Caixa Company 2100-Office 1670, DC 07, Numero of account: 0100194308

Now put your I articulate in at least 200 NEWSGROUPS, also called Forums of Discussion or Groups of News exist more than 24.000 groups. Alone you need 200, but as much as but quantity put, but money arrived you. Here they go some indications of as to be introduced in the newsgroups. AS TO HANDLE THE NEWSGROUPS:

In the first place, your do not you need to edit again all this letter. Only put the cursor of the mouse or mouse al start of this letter and drags downward so that all the text remain "sombreado". Later, it pressures the keys CTRL + C, in this way remains in the memory of your computer. Then, it opens an application preferably Block of Notes (NotePad), Wordpad or MsWord.
Then, once open any of these applications places the cursor al start of a blank leaf and pressures CTRL + V, and already you will have this letter and will be able to add your name and direction in the #5 continuing the instructions of but up. By I finalize keeps this letter with your changes in a new file of the application. IS ALL!

Everything that you have to do now is to put you in different "newsgroups", forums, classified, or announcements free, etc. and to publish it. It recalls that each time that want to cause sufficed with opening the file kept, to copy it and to hit it in the area of message of the newsgroup, or classified, forum or announcement free, etc. To arrive at them in any search engine put these terms: newsgroups, forums of discussion, classified, announcements free or guestbooks; and thousands will appear of paginas.

Do NOT you forget to publish all the announcement or letter but with

YOUR NAME in the position 5, disappearing the 1; when already have practices alone took you some 30 seconds by each newsgroup!

AS MANY AS BUT NEWSGROUPS OBTAIN, BUT ANSWERS (AND MONEY) WILL RECEIVE! BUT you SHOULD ENTER AT LEAST IN 200.**********YA THIS! !...

Your you will be receiving money of the entire world, of places that neither know and in a few days!! **You ASSURE YOU THAT ALL THE DIRECTIONS BE CORRECT**

Now the BECAUSE of all this: of 200 sent announcements, we say that alone receipt 5 answers very low example. Then I did $5.00 with my name in the position #5 of this letter. Now, each one of the 5 people that already they sent me the $1.00 do a minimum of 200 newsgroups, each one with my name in the #4 of the list and alone they respond 5 people to each one of the 5 original,

this does $25.00 but that I receive, now these people put a minimum of 200 newsgroups with my name in #3 place and alone they are received 5 answer of Each one. Would be doing other $125.00 additional. Now this 125 people put a minimum of 200 groups with my name in #2 place and I receive an additional one of $625.00.
OK from here this the part but amusing, each one of the 625 people they put its letters in other 200 groups with my name in the #1 and each one receives alone 5 answers, this does that I receive #3,125.00!!! of an original investment of $5.00 but postage stamps seals.

INCREIBLE!!! and as I said before, that alone 5 people respond is very little, the serious real average of 20-30 people! There that we put these numbers but to calculate. If alone 15 people respond, this does: In the #5-------$15.00, In the #4------$225.00, In the #3------$3,375.00, In the #2------$50,625.00, In the #1------$759,375.00. IF!!, BUT OF SEVEN HUNDRED FIFTY-NINE THOUSAND EURO. SIMPLE ESTADISTICA! Once your name no longer this in the list, removes the I finalize announcement of the newsgroup again.
What you should recall he is that thousands of people more, everywhere, they are connected to Internet each I GAVE and they will read these articles every day as your and I we do it. So I believe that nobody would have problems to invest

$5.00 and to see if really he functions. Some people come they think "=BFand if nobody decides to answer me?" THAT! Which is the probability that this even when there are thousands and thousands of honest people that as your and I they seek an extra money to have way... and that are willing to treat, therefore "there is not worse fight than the one that itself is not done". It is estimated that they exist from 20,000 to 50,000 new users ALL you GAVE THEM (everywhere).
ANOTHER SYSTEM TO be COMMUNICATED IS OBTAINING the E-MAIL OF PRIVATE PEOPLE. SHOULD BE AT LEAST 200 DIRECTIONS, AND THIS HAS AN EFFECTIVENESS MINIMA OF THE 5 AL 15%. IF ALONE you SEEK PEOPLE THAT SPEAK ESPANOL, SEES A SUPPLIER OF E-MAIL AND PRINTS A Latin American SURNAME AND

ALREADY THIS. Another form is to publish this letter in your PAGINA Web if you have it. ***Recuerda to do this of HONEST, CLEAN, AND CORRECT form and functioned with every security. Only you have to be honest.
Asegurte to print this article NOW, tries to maintain the list of all the ones that send you money and always you set you in the newsgroups and sees if all they are participating cleanly. Recalls, UPRIGHTNESS IS THE BEST METODO.

THE TIME IS IMPORTANT, therefore do not leave to pass but of 7 days of the moment that see this e-mail or announcement. We continue all the rules of the business.

I FINALIZE STEP: AND this is the step that more i like SIMPLY you SIT DOWN AND ENJOYS, BECAUSE =A1=A1=A1=A1 THE CASH COMES ON THE WAY =A1!!!! It expects to see a little bit one of money during the second week, but from the third week, STORM OF ENVELOPES IN YOUR MAIL. Everything that you have to cause is to receive it and tries not to shout very strong, when realize that this time =A1=A1=A1lo achieved! !!!!!

When harm you to remain short of money, revives this file and re-publishes in the same places in which are going to do them now and new places that will know in the future. Always mant=E9n by hand a copy of this article, you REVIVE IT each time that need money.

It IS A TOOL INCREIBLE THAT you CAN USE AGAIN AS MANY TIMES NEED CASH, IS AN EXTRAORDINARY FORM TO SHARE AND IN WHICH we ATTRACT THE ABUNDANCE TO OUR LIVES.

UPRIGHTNESS IS WHAT CAUSES SUCCEEDS TO THIS PROGRAMS. IT do NOT FORGET. =A1=A1=A1BUENA LUCK! !!!

Alone an annotation more, if you know to translate all this message to other languages, are able besides, insert them in forums of different countries as, France, Germany, Russia this I tell it you like counsel to expand the possibilities that see it a lot of but people.

Hello,

Besser Associates is offering their acclaimed "DSP Made Simple for Engineers" class in San Jose, California, on 15-17 August 2005.

This 3-day class is particularly well-suited to those involved in RF and Audio signal processing, and computer programmers, who need to learn the fundamentals of DSP theory. Details of this course, including target audience, learning objectives, course outline, materials descriptions, and past student comments are appended to this posting as items "A" through "I".

To register, please contact Besser Associates at 650-949-3300. For additional course offerings, call Besser Associates or visit http://www.bessercourse.com/ to view our public course catalog and current schedule.

------detailed course information follows------

A. BESSER COURSE TITLE:

"DSP Made Simple for Engineers"; a 3-day tutorial course on digital signal processing (DSP) theory.

B. TARGET AUDIENCE

- The primary audience is practicing RF (and Audio) hardware Engineers and Technicians who need to understand digital signal processing (DSP) because of its ever-increasing role in the processing of real-world signals.

- While DSP Made Simple is not a "programming course", it is particularly well suited for computer programmers because of their increasing need to understand DSP algorithms.

- In general, this course is beneficial to anyone involved in the acquisition, generation, transmission, manipulation, or analysis of digital signals.

C. WHAT THE STUDENT GAINS FROM THE COURSE:

- The ability to apply DSP techniques to real-world signal processing problems in their work.

- A solid grasp of DSP basics and the ability to move gradually to more sophisticated DSP concepts and applications.

- The ability to speak the language of DSP.

- The ability to understand written descriptions (articles, application notes, textbooks) of DSP methods used in practice.

To register, please contact Besser Associates at 650-949-3300.
For additional course offerings, please call Besser Associates
or visit http://www.bessercourse.com/

D. COURSE OUTLINE

DAY 1

DISCRETE SEQUENCES AND SYSTEMS

- Discrete Sequences, Their Notation, and Representation
- Signal Amplitude, Magnitude, Power Definitions
- Signal Processing Operational Symbols

PERIODIC SAMPLING

- Periodic Sampling and Aliasing
- Sampling Low-Pass Signals
- Sampling Bandpass Signals
- Spectral Inversion in Bandpass Sampling

THE DISCRETE FOURIER TRANSFORM

- Understanding the DFT Equation
- DFT Properties
- DFT Results Interpretation
- Shifting Theorem
- Inverse DFT
- DFT Leakage
- Use of Signal data Windows
- DFT Resolution and Zero Padding
- DFT Processing Gain

DAY 2

THE FAST FOURIER TRANSFORM

- Relationship of the FFT to the DFT
- FFT Input/Output Indexing Bit Reversal
- Guidance On Using FFTs With Real-World Signals
- Averaging Multiple FFTs

FINITE IMPULSE RESPONSE DIGITAL FILTERS

- An Introduction to Finite Impulse Response Filters
- Convolution In FIR Filters
- FIR Filter Analysis and Design Examples
- Phase Response of FIR Filters (Group Delay)
- Half-Band FIR Filters
- Brief Introduction to Matched Filters
- FIR Comb Filters

DAY 3

INFINITE IMPULSE RESPONSE DIGITAL FILTERS

- An Introduction to Infinite Impulse Response Filters
- The Laplace Transform
- The z-Transform
- IIR Filter Design and Analysis Methods
- Pitfalls in Building IIR Digital Filters
- Cascade and Parallel Combinations of Digital Filters
- Comparison of IIR and FIR Filters

ADVANCED SAMPLING TECHNIQUES

- Quadrature Signals and Quadrature Sampling
- Quadrature Sampling With Digital Mixing
- Digital Resampling (Sample Rate Change)
- Decimation
- Interpolation
- Decimation and Interpolation in Combination

E. WHAT THE COURSE DOES NOT COVER:

The DSP Made Simple Course does not cover the hardware architecture of commercial DSP integrated circuits. Likewise, while the course introduces the topic of commercially available DSP design software packages, no computer programming is performed as part of the course.

F. COURSE HANDOUT MATERIAL

The training material comprises 475 pages of class handouts. With the typical lecturer, the student must decide between taking notes, or paying attention to what the lecturer is saying. The training handout solves this "note-taking" dilemma. The DSP Made Simple training material provides a "bulletized" description of each DSP topic in addition to an abundance of diagrams. A textual description summarizing the key DSP concepts are included at the bottom of each handout page.

The highly praised DSP textbook, "Understanding Digital Signal Processing, 2/E" (Prentice Hall Publishing) will be supplied to each student.

G. COURSE LECTURER:

RICHARD LYONS is a Consulting Systems Engineer and lecturer with Besser Associates in Mt. View, CA. He has been the Lead Hardware Engineer for numerous large signal processing systems for both the National Security Agency (NSA) and TRW Inc. An experienced lecturer, and instructor at the University of California Santa Cruz Extension, Richard has delivered signal processing seminars and training courses throughout the US and Europe. As an Associate Editor for the IEEE Signal Processing Magazine, he created and edits the magazine "DSP Tips & Tricks" column. He has written numerous articles on DSP topics, and authored the best selling textbook "Understanding Digital Signal Processing 2/E" (Prentice-Hall, 2004). Richard is a member of the IEEE, and Eta Kappa Nu the electrical engineering honor society. He can be contacted at: R.Lyons@ieee.org.

H. WHAT'S GOOD ABOUT THE COURSE

* Instead of overwhelming the student with complex mathematics, the lecturer uses intuitive explanations and well-chosen examples to develop a fundamental understanding of DSP theory. (A recipe for technical material that's too rich in equations is hard for the beginner to digest.)

* The practical aspects of signal processing techniques are stressed as opposed to mathematically rigorous discussions of discrete system theory. THIS COURSE TEACHES THE STUDENTS HOW TO USE DSP IN THEIR WORK.

* Comprehensive in scope, and gentle in approach, the course gives the student a thorough grasp of the basics and the ability to move on to more sophisticated DSP concepts and applications.

* In addition to covering the key practical aspects of DSP, a collection of tricks-of-the-trade used by DSP professionals, to make their processing more efficient, are introduced throughout the course.

* In terms of DSP training, this course is the beginner's best opportunity to efficiently and thoroughly learn the fundamentals of DSP.

I. QUOTES FROM RECENT STUDENTS:

"Excellent course for engineers wanting to get (an) insight into DSP."
- George Hughes, Lockheed Martin

"Instructor takes a traditionally difficult subject to learn, and made

it easy. His printed material is excellent."
- William Schnable, Lucent Technologies

"I appreciated the instructor's ability to communicate complex subjects in a simple format. This course is in my top 3 of 'Best Ever' (in 20 years)."
- Brian Kralicek, Nokia

"Lyons presents a very solid engineering perspective of the subject with a minimal, yet sufficient, amount of math."
- Gene Kozin, Itron Inc.

"... great instructor. I now understand what the college professors were trying to teach."
- Simon Sirin, U.S. Dept. of Energy

"This course takes the mystery out of DSP. Instructor has a knack for presenting information in a way that is very logical and easy to understand."
- Dale Laing, Lockheed Martin

"Lyons' is an excellent communicator of highly technical material. He uses plenty of real examples to translate theory to something of utility."
- David Day, Day Test and Measurement Inc.

To register, please contact Besser Associates at 650-949-3300. For additional course offerings, call Besser Associates or visit http://www.bessercourse.com/ to view our public course catalog and current schedule.

Hello, can someone explain to me, or point me to a reference
explaining, the relation between bandwidth and bits per second. Also, I
am looking for an explaination on the differences between bauds and bit
per second.
Thanks.

Hello!

I have a question. I work in a project with Spread Spectrum Technik.
I wanted to know how can I choose a PN-Code. I have a noise and die
Spectrum, and ideal I want to choose a code which the spectrum
complementary. How can I make it?

I know that I can produce codes with simulink, but how can I choose a
code with the complementary spectrum for my noise?

Thanks and regards,
Flavia Rafols

Hello!

I work in a project with SPread Spectrum Technik.
I must to program a correlator. I have read about matched filters.
That is wie to program a fir filter?

Thanks and regards,
Flavia Rafols

Hi all - I've recently bought a Tiny 2 TNC. Unfortunately though there were no cables no manuals with it. Despite scouring the web (mind you I've probably not been looking in the right place!), I've so far not found any info. Could anyone please supply the info I need to construct for the computer - TNC cable and the TNC - Radio cable? Many thanks.

regards Carl Taylor (2MOTYR)

>Hi
I have posted a manual for the tiny 2 on
www.mbars.co.uk
It is under the other ebooks and manuals section of the manuals. All manuals
and schematics from this site are free but you do need to register. I will
post the schematit for the tiny 2 soon.
Paul

I seem to have problems with that site despite registering. You can
find the Tiny-2 stuff on mods.dk:
http://www.mods.dk/view.php?ListManuals=tnc

Or if you just want to make up the cables here's a starting point:
http://www.packetradio.com/

WHAT IS ARMAD ?

http://www.freewebs.com/kb9ibw/

ARMAD is an annual Amateur Radio Special Event project that stands for Amateur Radio Military Appreciation Day. We work with National Military Appreciation Month during the month of May. Amateur Radio Operators from around the world team up during this joint effort to allow the people from our communities to gather at public locations such as shopping centers, parks, VA hospitals, and sporting events to express verbal positive support "LIVE" over the radio for members of the Military, Veterans, Reserves, National Guard, and military support groups. It is also a chance for those at each location to hear and exchange messages of appreciation with each other over the radio. Many of us have friends, relatives, and neighbors that are active duty, and past members of the armed forces. ARMAD gives us the chance to support one another, and to express our thanks and appreciation to those that sacrifice and serve in the Armed Forces.

Well I managed to register and log on. Got a nice email confirming logon
name and password. Tried to log on again and can't!!!!!
Ta-ta mbars.

> I seem
to have problems with that site despite registering. You can find
> the Tiny-2 stuff on mods.dk:
> http://www.mods.dk/view.php?ListManuals=tnc

Yep. I managed to register and log on. Got a nice email confirming logon
name and password. Tried to log on again and can't!!!!!
Bye-bye mbars.

The normal problem with echolink & a router is port forwarding. Ports 5198 & 5199 need to be forwarded in UDP format not TCP/IP. On the echolink site there is a test utility to test your connection & hardware.
It will produce a report telling you what is going on.
Basically if the above ports are mentioned then you can bet that they need forwarding in the router config.

Anyone interested in some good old teletype (mechanical) equipment?

I have a Teletype T.D., typing reperf, and 28ASR (on 100 wpm).
And a Klienschmit machine on 60 wpm.

Free to a good home...... pick up only in York, PA.

Bob, WB3AWJ
wb3awj@blazenet.net

Besser Associates is offering their acclaimed "DSP Made Simple for Engineers" class in Phoenix, Arizona, on 27-29 April 2005.

This 3-day class is particularly well-suited to those involved in RF and Audio signal processing, and computer programmers, who need to learn the fundamentals of DSP theory. Details of this course, including target audience, learning objectives, course outline, materials descriptions, and past student comments are appended to this posting as items "A" through "I".

To register, please contact Besser Associates at 650-949-3300. For additional course offerings, call Besser Associates or visit http://www.bessercourse.com/ to view our public course catalog and current schedule.

------detailed course information follows------

A. BESSER COURSE TITLE:

"DSP Made Simple for Engineers"; a 3-day tutorial course on digital signal processing (DSP) theory.

B. TARGET AUDIENCE

- The primary audience is practicing RF (and Audio) hardware Engineers and Technicians who need to understand digital signal processing (DSP) because of its ever-increasing role in the processing of real-world signals.

- While DSP Made Simple is not a "programming course", it is particularly well suited for computer programmers because of their increasing need to understand DSP algorithms.

- In general, this course is beneficial to anyone involved in the acquisition, generation, transmission, manipulation, or analysis of digital signals.

C. WHAT THE STUDENT GAINS FROM THE COURSE:

- The ability to apply DSP techniques to real-world signal processing problems in their work.

- A solid grasp of DSP basics and the ability to move gradually to more sophisticated DSP concepts and applications.

- The ability to speak the language of DSP.

- The ability to understand written descriptions (articles, application notes, textbooks) of DSP methods used in practice.

To register, please contact Besser Associates at 650-949-3300.
For additional course offerings, please call Besser Associates
or visit http://www.bessercourse.com/

D. COURSE OUTLINE

DAY 1

DISCRETE SEQUENCES AND SYSTEMS

- Discrete Sequences, Their Notation, and Representation
- Signal Amplitude, Magnitude, Power Definitions
- Signal Processing Operational Symbols

PERIODIC SAMPLING

- Periodic Sampling and Aliasing
- Sampling Low-Pass Signals
- Sampling Bandpass Signals
- Spectral Inversion in Bandpass Sampling

THE DISCRETE FOURIER TRANSFORM

- Understanding the DFT Equation
- DFT Properties
- DFT Results Interpretation
- Shifting Theorem
- Inverse DFT
- DFT Leakage
- Use of Signal data Windows
- DFT Resolution and Zero Padding
- DFT Processing Gain

DAY 2

THE FAST FOURIER TRANSFORM

- Relationship of the FFT to the DFT
- FFT Input/Output Indexing Bit Reversal
- Guidance On Using FFTs With Real-World Signals
- Averaging Multiple FFTs

FINITE IMPULSE RESPONSE DIGITAL FILTERS

- An Introduction to Finite Impulse Response Filters
- Convolution In FIR Filters
- FIR Filter Analysis and Design Examples
- Phase Response of FIR Filters (Group Delay)
- Half-Band FIR Filters
- Brief Introduction to Matched Filters
- FIR Comb Filters

DAY 3

INFINITE IMPULSE RESPONSE DIGITAL FILTERS

- An Introduction to Infinite Impulse Response Filters
- The Laplace Transform
- The z-Transform
- IIR Filter Design and Analysis Methods
- Pitfalls in Building IIR Digital Filters
- Cascade and Parallel Combinations of Digital Filters
- Comparison of IIR and FIR Filters

ADVANCED SAMPLING TECHNIQUES

- Quadrature Signals and Quadrature Sampling
- Quadrature Sampling With Digital Mixing
- Digital Resampling (Sample Rate Change)
- Decimation
- Interpolation
- Decimation and Interpolation in Combination

E. WHAT THE COURSE DOES NOT COVER:

The DSP Made Simple Course does not cover the hardware architecture of commercial DSP integrated circuits. Likewise, while the course introduces the topic of commercially available DSP design software packages, no computer programming is performed as part of the course.

F. COURSE HANDOUT MATERIAL

The training material comprises 475 pages of class handouts. With the typical lecturer, the student must decide between taking notes, or paying attention to what the lecturer is saying. The training handout solves this "note-taking" dilemma. The DSP Made Simple training material provides a "bulletized" description of each DSP topic in addition to an abundance of diagrams. A textual description summarizing the key DSP concepts are included at the bottom of each handout page.

The highly praised DSP textbook, "Understanding Digital Signal Processing, 2/E" (Prentice Hall Publishing) will be supplied to each student.

G. COURSE LECTURER:

RICHARD LYONS is a Consulting Systems Engineer and lecturer with Besser Associates in Mt. View, CA. He has been the Lead Hardware Engineer for numerous large signal processing systems for both the National Security Agency (NSA) and TRW Inc. An experienced lecturer, and instructor at the University of California Santa Cruz Extension, Richard has delivered signal processing seminars and training courses throughout the US and Europe. As an Associate Editor for the IEEE Signal Processing Magazine, he created and edits the magazine "DSP Tips & Tricks" column. He has written numerous articles on DSP topics, and authored the best selling textbook "Understanding Digital Signal Processing 2/E" (Prentice-Hall, 2004). Richard is a member of the IEEE, and Eta Kappa Nu the electrical engineering honor society. He can be contacted at: R.Lyons@ieee.org.

H. WHAT'S GOOD ABOUT THE COURSE

- Instead of overwhelming the student with complex mathematics, the lecturer uses intuitive explanations and well-chosen examples to develop a fundamental understanding of DSP theory. (A recipe for technical material that's too rich in equations is hard for the beginner to digest.)

- The practical aspects of signal processing techniques are stressed as opposed to mathematically rigorous discussions of discrete system theory. THIS COURSE TEACHES THE STUDENTS HOW TO USE DSP IN THEIR WORK.

- Comprehensive in scope, and gentle in approach, the course gives the student a thorough grasp of the basics and the ability to move on to more sophisticated DSP concepts and applications.

- In addition to covering the key practical aspects of DSP, a collection of tricks-of-the-trade used by DSP professionals, to make their processing more efficient, are introduced throughout the course.

- In terms of DSP training, this course is the beginner's best opportunity to efficiently and thoroughly learn the fundamentals of DSP.

I. QUOTES FROM RECENT STUDENTS:

"Excellent course for engineers wanting to get (an) insight into DSP."
- George Hughes, Lockheed Martin

"Instructor takes a traditionally difficult subject to learn, and made

it easy. His printed material is excellent."
- William Schnable, Lucent Technologies

"I appreciated the instructor's ability to communicate complex subjects in a simple format. This course is in my top 3 of 'Best Ever' (in 20 years)."
- Brian Kralicek, Nokia

"Lyons presents a very solid engineering perspective of the subject with a minimal, yet sufficient, amount of math."
- Gene Kozin, Itron Inc.

"... great instructor. I now understand what the college professors were trying to teach."
- Simon Sirin, U.S. Dept. of Energy

"This course takes the mystery out of DSP. Instructor has a knack for presenting information in a way that is very logical and easy to understand."
- Dale Laing, Lockheed Martin

"Lyons' is an excellent communicator of highly technical material. He uses plenty of real examples to translate theory to something of utility."
- David Day, Day Test and Measurement Inc.

To register, please contact Besser Associates at 650-949-3300. For additional course offerings, call Besser Associates or visit http://www.bessercourse.com/ to view our public course catalog and current schedule.

this might not be the right group..but hey..
i have a TV card installed but can't get suitable drivers for it..
not sure what it is..but it's got a philips BT848 chip..
i want to use this to watch normal TV and use the composit socket for an external receiver unit..
i am using the older hauppauge drivers but the sound is buzzing..and the composit nearly has a signal..
i have tried mixing and matching drivers but no perfect match yet..

any suggestions ??..or group thats more suited ??

I seem to be in sound card hell.   My machine's on-board audio is
fixed at a 48KHz sample rate and I don't want to do re-sampling in
software.   I scrounged a sound card out of another machine and found
it to be a undocumented OEM version of the SBLive! for Gateway computers.
It's just different enough from the standard version that it plays, but
will only record silence.

Since it looks like I'll have to buy something I'm wondering... what's
a good PCI sound card for ham use?   Comments?

My SBLive will record from line-in, or the microphone. You control
which one via software.

(I do it on Linux, so I'm not sure how exactly you'd change it. But
the odds are good that it can record.)

You could try to do a search on the FCC ID code, so you can find out who the
manufacturer is and what the product is. After that it will be easier to
locate a driver.

The 16-bit SoundBlaster PCI works best (for me) with the largest variety
of Ham Radio software.

So far I've found info on about 11 different cards that all call
themselves SBLive!  None of the info describes the custom OEM version
made for Gateway, the one that has different jacks on the back.

> (I do it on Linux, so I'm not sure how exactly you'd change it.  But
> the odds are good that it can record.)

Yep, probably just a simple matter of programming.  But since the card
is undocumented it makes the programming choices a bit harder.  I suppose
I could spend the next several months toggling toggling bits at random
in hope that I stumble on the right combination.   Or I can buy anyother
audio card.
```

Got any suggestions on a good card for ham use?

Get the generic SBLive! installer from Creative's web site.
When you install it, make sure you install SB16 emulation.
This works for Windows. For Linux you may need to check
that the specific CTxxxx number has support.

Details on the different cards can often be found via
a Google of their CTxxxx number.

I've picked up a number of the older "SBLive! Gamer Value"
variety on eBay, generally for about $10 - $12. These are pretty
generic versions of the Live!, and have the four jacks instead of 3.
Was going to check CT number, but all are in computers right now.
CT4670 or 4560 sounds kinda familiar.

"Hank Oredson" <horedson@earthlink.net> writes:

> Get the generic SBLive! installer from Creative's web site.

Perhaps if I had a windows partition on this box, but I don't.
Apparently Gateway has a windows driver for this specific card, too.

> Details on the different cards can often be found via
> a Google of their CTxxxx number.

Yep. My card is the CT4830 which apparently some software reports
as a CT4832. The Gateway version of this card removed the S/PDIF
output jack and multiplexed it onto the line out 1 jack with some
(undocumented) way to switch between audio and digital output.
I got around that by using the line out 2 jack.   Play works just
fine.

But recording gives me silence.   I suspect there's an internal mapping
in the the EMU-10K1 that isn't being set correctly by the *BSD driver.
I get silence on line in and mic in.   It's a digital interface issue
as the mixer is more than happy to route mic and/or line in to my
line out.

That's an idea. I've also been told that older Ensoniq PCI audio
cards will work well in my environment. I guess it's ebay time.
I'm tired of looking at audio driver code and guessing what the
relevant bits may be.

Thanks,

I've had some problems with the Ensoniq cards, and now
just toss 'em in the trash. Long story, but I tend to end up
with a lot of older compturs to recycle into ham radio use.

Any generic SBLive will do you well, and they're cheap. I've gotten
several locally for $5/each, and all of my computers have one.
They're excellent cards, and while I don't know what the deal is with
the OEM version you have, it's not worth wasting much time on.

As an added bonus, I don't know about the BSD driver, but the Linux
drivers can play multiple streams at once on the card without a
software mixer like esd. This doesn't sound like a big deal, but it
is -- you can be playing music, and it can play a new mail sound at
the same time. Or you can fire off six different xmms programs, and
play six different songs at once. It's very nice, and it's why I
don't deal with anything but SBlives anymore.

Not wasting time is good!   A cheap SBLive or SB16 is what I'll
look for.   I'll save my current card for the next windows machine
I build, i.e. religate it to the junk pile :-)

Thanks to all for your input,

Hamshack Hack is a 're-master' of the KNOPPIX Linux distribution made
especially for Amateur Radio Operators (Hams) who have no prior
experience with Linux. It provides a complete Operating System (OS),
software for the hobby, web, and word tasks. All contained in an .iso
file ready to burn to CD.

FREE downloads and instructions are available at:

http://hamshack-hack.sourceforge.net/

Download the .iso image file and burn it to a CD and it becomes a 'Live CD' system.

Put the CD in the drive and re-boot your machine and you'll boot up with a fully functional Linux system. Your usual operating system will remain on your hard drive and all its files will be accessable but untouched until you say so, Linux will be running the show. When you quit and reboot, the Linux system will 'vaporize' and you'll be back with your regular system from your hard drive.

The CD contains a wide and varied selection of Ham software ... everything from PSK, RTTY, Packet, MFSK, and SSTV, to programs for weak signal, aurora, and moon bounce. There are programs for the International Beacon Project and APRS. XLog and the XDx dx-cluster terminal. Even a Smith Chart computer and EchoLink.

In addition to the Ham software, there are web browsers, several text editors, AbiWord for word processing, the GNUmeric spreadsheet, and gLables for making QSL card or mailing lables.

If you've been wondering about all the Linux 'chatter' lately, here's a chance to find out whats happening with that 'other OS'. And, no need to install it ... just re-boot your machine.

LINUX! Not just for Guru's anymore!

Harv, AI9NL

John, Winlink has from day one (Aug 2004) when I called Steve k4cjx and asked how can I help.. And was told all packeteers are (Explicitive removed). If you must know email me privately n9lya@n9lya.com
... Quickly found found that winlink wants to coexist with NO ONE.. So we tried that in fact I have tried 5 times nmow to solicit cooperation from winlink.. they have an agenda... They want to pursue that agenda and do it alone...

>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

If you wish to file your comments with the ARRL regarding their bandwidth proposal, there is little time left to do so. Comments should be sent to:

bandwidth@arrl.org

It is my understanding that the proposal, in it's current form, will allow WL2K stations control of nearly 40% of ALL of our current allocations in the 10, 15, 20, 40, and 80 meter bands. This does not include their efforts to swallow up 1/2 of the 30 meter band. CW users will give up the most when you consider that these users will share their remaining bandwidth with all "narrow" digital modes ... which is everything BUT WL2K. Also, packet radio will forever be laid to rest on the HF bands, as the proposal will eliminate those miniscule parts of the bands for their auto-forwarding.

If it's OK with you to give up 40% of your favorite bands to internet e-mail spewing Pactor III robots, then disregard this message, and your wish will come true. The ARRL is wearing blinders, and can only see one direction at this time, and that's WL2K. I don't intend to stand idly by and give up 40% of our most popular bands so some rich dudes in their motor homes, or on sailboats, can enjoy cheating the legitimate ISP's out of the fees that they charge for providing this service.

I am all in favor of reorganizing our allocations in an effort to accommodate new digital modes, but this proposal takes way too much from the 98% of amateur radio operators who are not interested in turning our hobby into a cheap internet e-mail gateway for the rich and priviledged. Oh yeah, they will cry emergency communications, and the "amateur radio inernet e-mail for every EM's desk" motto, but it's just not worth it.

Tell the ARRL how you feel ... this could certainly be your last chance to do so.

Ponder this ... if these new wideband modes are soooo efficient, then why do they require 20 Khz of space? If you give packet radio 20 Khz, it too could be much faster. The speed limit on packet radio is now determined by the pitiful amount of bandwidth allocated to them. Why does WL2K, a proprietary mode, with very high startup costs deserve all of this spectrum when packet radio has had to deal with the microscopic slices of bandwidth for all of these years??? It just smells of yesterday's garbage, and I don't think

that the proposal, in it's current form, will benefit anyone but the 2%
minority fighting for 40% of our bands.

For the record ... I do NOT, nor do I plan to utilize packet radio on the HF
bands. My concerns are for the service in general, and the negative impact
this proposal will have.

<snippety>

What would really have helped is links to sites that support your assertions. I've visited both the ARRL site at this link:

http://www.arrl.org/news/features/2005/04/01/1/?nc=1

...and winlink.org at this one...

http://winlink.org/sysop/PMBO_FREQ.htm

...and I can't find anything which leads me to believe that there would be any sort of "packet-spewing robots" polluting the HF bands. In fact, I don't see anything other than a neat-looking project to establish a worldwide digital network that does not depend on the Internet.

If you can give a clearer explanation of how you came to your conclusions, including some specific references to back them up, I will cheerfully make my voice heard at ARRL (I'm a lifetime member).

Except for the minor points that WinLink2K requires the internet
to work, and uses the internet to "forward" it's traffic ...

Yes indeed there is an agenda, and that agenda does NOT
use Amateur Radio to move the traffic. The entire concept
is flawed when you consider how it will fail in emergencies.

Why stop there? Why not ban ham radio altogether, since (for example) ham voice communication cheats all those poor starving phone companies?

> Ponder this ... if these new wideband modes are soooo efficient, then why do they require 20 Khz of space? If you give packet radio 20 Khz, it too could be much faster. The speed limit on packet radio is now determined by the pitiful amount of bandwidth allocated to them.

I'm all in favor of more bandwidth for spread spectrum packet, since it means less likelihood of interference (a voice or CW conversation could happen right on top of a 20 khz packet session without either interfering with the other). But I agree ham radio should not be a general purpose internet gateway.

One reasonable solution could be to limit the maximum bit rate on HF to RTTY speed, 60 bits/sec or so, while still allowing spreading the 60 bits/sec across 20 khz of bandwidth. That's fast enough to send reasonable email and to have realtime text chat, would not require any tuning, and would be very effective at low transmit power. I've been interested in this approach for quite a while.

> Why does WL2K, a proprietary mode, with very high startup costs deserve all of this spectrum when packet radio has had to deal with the microscopic slices of bandwidth for all of these years???

I'm not familiar with WL2K but I don't like the idea of any type of proprietary mode being given special recognition in the band plan for any reason.

I know what you mean... When the ARRL starts to mandate which digital mode we must use, then rationality and the scientific method both go out the window. - By introducing "politics" (if you want to call fascism 'politics') into the matter, the ARRL puts itself on the tabloid level. - They undermine themselves while doing the same to the rest of hobby.

Corruption and stupidity at ARRL HQ... Sumner and Haynie are both in this, up to thier eyebrows.

I don't have a problem with the idea of mandating in favor of some digital modes at the expense of others. But the mandated modes should be non-proprietary. Spectrum is not the property of any particular vendor.

I think you missed the point.

WinLink2K depends on connectivity to the internet to work.
For emergency communication it is totally useless.

If the internet were available, one would simple USE it
in the normal manner. If it is not available, WinLink2K
is of no help to you at all. The whole concept is a scam.

I'm not sure what WinLink2K is or what its relation to emergency
communication is supposed to be. Is there a url about it?

I've been interested for a while in a packet mode that uses the
internet. An endpoint node wouldn't have to be on the net, but it
would connect to a remote node that also had internet connectivity.
So it would be fine for an emergency at the endpoint. If there was a
catastrophe that took out the whole internet, then it wouldn't work.

Gidday Paul

There has been for years

The NOS TCP/IP over AX25 system that was setup around the late 1980's allows you to have gateways with various interfaces and tunnels. ie connected radios, modems, ethernet etc. There use to be quite a few wormholes where one use to pass packets without infringing amateur licenses. Basically you can either run TCP/IP over radio and internet links with any kind of routing/rerouting protocol you like. Each point where there are dual interfaces can also be an intelligent gateway/server.

Apart from political and possibly legal reasons there is no technical problem with setting up a RF (amateur) link to replace/failover internet ones. Some care must obviously be exercised in bandwidth requirements.

There is a lot more available on this that is beyond the small scope of my post.

Linux boxes for example can do this job nowadays. I believe there are Windows equivalents but havent checked.

Cheers Bob VK2YQA

I'm familiar with NOS but I don't understand what it has to do with
WinLink2K. What specifically is WinLink2K? Thanks.

Hi,
Maybe this will help a bit.
I have a D-Link 614+ and have it set up as follows:
ADVANCED Tab
     Applications:

Special Application

Special Application is used to run applications that require multiple
connections.

```
                 Enabled
Name            Echolink
Trigger Port    5198 -  5199
Trigger Type    Both
Public Port     5198,5199
Public Type     Both
```

Success!

Frits

Sorry Paul I havent been taking any notice of it.. <grin>

Anything with "Win" in its name implies an OS I dont use! (or at least very rarely)

Cheers Bob

When I use IE 6 to go to these sites I cannot not listen to the sound bytes, Windows Media Player starts and then informs me that it cannot play the file. If I use Netscape 7.2 I can listen to them using WMP. WMP is the default wav file player. Anybody know by it won't work with IE?

Hi Guys,

I heard the news via the internet... and it's true. Henry amps are no
more...:

Here's the e-mail from Mr. Henry Himself:

From: "Ted Henry" <henryradio@earthlink.net>
To: "Chuck Adkins (K8CPA)" <*************@comcast.net>
Subject: Re: Lost your Lease?
Date: Thursday, February 10, 2005 12:23 PM

There were about 15 reasons why we stopped - the primary reason was that the business has lost money for a number of years. The loss of the lease was about 5th down on the many reasons it made no sense to continue the business.

Thanks for your interest.

I am using Ham Scope and Mmtty to decode RTTY with my sound card. It works fine for hame radio operators but I have found RTTY on non-ham frquencies and all I get is garbage. For example, there is an RTTY signal at approximately 2.042 MHZ at 1100 UTC on the West Coast and all that displays is random characters. I suspect it has something to do with the protocol or baud rate settings. Anyone know what they might be? Not sure if this is maritime station or not. Thanks.

Much of the RTTY that you'll receive on non HAM frequencies will be encrypted. That is probably why you'll receive the random characters even though you might have the protocol and baud settings correct.

Most hams are received in the LSB mode. Comercial statisons usually are received in the USB mode or the reversed mark/space relationship.   Also the speed (baud rate) and shift are usually differant than the normal ham 45 baud (60 wpm) and 170 Hz shift.

Okay, I have some questions about RTTY:

1. What unencrypted RTTY traffic is out there besides hams?

2. What sort of encoder would I need to read RTTY with my NRD-525 and what
do I need to know to get it functioning?

3. My receiver has an RTTY mode. What exactly does that do in my receiver?
Couldn't I just use USB or LSB?

Thanks,

Greg

I am not sure about RTTY that is not ham now. I doubt much is in use.
There used to be some using other shifts and upside down from the ham standard.
You may find a list on rtty.com

> 2. What sort of encoder would I need to read RTTY with my NRD-525 and what

YOu can use your computer with the built in sound card. There are several free programs you can use . MMTTY is a good one to start with.

Go here to get the programs.

http://www.muenster.de/~welp/sb.htm

YOu just hook the sound card input to the speaker or output of the receiver.
Even a mic on the computer layed next to the speakers will work in a quiet location.

> 3. My receiver has an RTTY mode. What exactly does that do in my receiver?
> Couldn't I just use USB or LSB?
>

The reciever will go to either the LSB or USB mode but the filters will be shifted so they will be centered at higher audio frequencies. The normal ham rtty audio tones are 2125 hz and 2295 hz for the normal 170 hz shift.
In real use the receiver could be tuned so that almost any lower frequencies

are comming out of the speaker and the demodulator (converter or sound card freqwuencies) set for the lower frequencies. The way it was done in the precomputer days were with fixed filters and it was hard to change the tuning of them. By using lsb and the mark tone of 2125 (think that was a multple of some audio tuning fork but not sure) the tuning was simplified.

You can use LSB for most ham and USB for the comercial rtty. You may or may not be able to use the narrow filters in the receiver. I don't know exectally how that receiver switches the filers in and out.

Okay, thanks for the info Ralph. I haven't gone to the links yes but I'm
betting there's not a lot of RTTY software for my Apple computer. That's
why I thought of a standalone decoder, like an MFJ or something. But it's

probably not worth the trouble if, as you say, there isn't much RTTY traffic out there.

there used to be press services on RTTY.

     Are you certain the signal even is RTTY? I've run across a number
of signals that sound like RTTY, but are in reality anything but.

     Also, as others have pointed out, you may be picking up an
encrypted signal.

     Keep the peace(es).

Good News!

Do you know how simple it is to go to Heaven after this
life has ended?

The good news is that God came from Heaven to earth
in the person of Jesus Christ over 2000 years ago and

died for our past, present and future sins(misdeeds). He was born in the land of Israel supernaturally to a virgin Jewish woman named Mary. He lived a sinless life for thirty-three years and then sacrificed His sinless blood and died on a cross to pay the death penalty for our sins.

After Jesus died He rose from the dead three days later as He said He would. The Holy Bible also tells us that Jesus Christ ascended into Heaven and that all who accept Him as their Lord and Saviour will live forever with Him in Heaven where there is no more death, sorrow, sickness and pain.

The Holy Bible very clearly explains how simple it is to be saved and on your way to Heaven, "For if you confess with your mouth, "Jesus is Lord," and believe in your heart that God raised him from the dead, you WILL BE SAVED." (Romans 10:9)

You can be saved right now and on your way to Heaven if you will open your heart to Jesus and pray the following prayer:

Dear Jesus Christ, I want to be saved so that I can have a home in Heaven when I die. I agree with You that I am a sinner. I believe You love me and want to save me. I believe that You bled and died on the cross to pay the penalty for my sins. I believe that You rose from the dead. Please forgive my sins and come into my heart and be my Lord and Saviour. Thank You Lord Jesus Christ for forgiving me and saving me through Your merciful grace. Amen.

You are now a Christian if you said the prayer and allowed God to save you. Welcome to the family of God.

If you decide to wait till later you may die before you get another chance to be saved because none of us knows exactly when we will die.

Have a great day!

>
>1. What unencrypted RTTY traffic is out there besides hams?

For 5 bit asynch (start and stop bits using Murray code), not much.
There may still be some very cryptic weather reports, and maybe the
North Korean news service is still at it.

Ex-Soviet maritime traffic uses a code where the Cyrillic charaters are
mapped to their close Latin alphabet phonetic matches so you can sort
of read it.

TOR, (which is actually two different ways of packaging 5 bit RTTY with
some error correction), will have some maritime traffic. There are
probably FEC-TOR weather reports from the various coast guards around
the world on shortwave , and a system that runs down on 512? kHz for
maritime information. FEC-TOR is a 100 baud narrow shift continuous
transmission. ARQ-TOR is the dREEP-dREEP-dREEP of three character blocks
or the 1? character reply from the other station. Hams use half duplex
ARQ-TOR where the same frequency is used for both stations, maritime
channels are full duplex.

>2. What sort of encoder would I need to read RTTY with my NRD-525 and what
>do I need to know to get it functioning?

A lot of the 1980's vintage packet controllers had numerous monitoring modes.
I built the Heathkit version of AEA's PK-232 and it will copy RTTY, TOR,
AX.25, even weather fax if you have a graphics printer of that vintage.

>3. My receiver has an RTTY mode. What exactly does that do in my receiver?
>Couldn't I just use USB or LSB?

Maritime RTTY channels are on .5 kHz spacing, a bit too narrow for a 2 kHz
wide USB filter if the band is busy.

The last non-ham RTTY station I remember receiving was a news service for North Korea, years ago.

I had a PK-232 TNC, with it's SIAM (signal identification) mode that would sniff out the parameters on a mystery signal and attempt to display it for you. It worked pretty well, I thought, decoding oddball digital stuff more often than I expected it to.

It was strange to see outdated old Soviet propaganda phrases about "imperialist capitalist dogs" and about how the standard of living in North Korea had gotten so good that they were having to turn Americans immigrants away from the border, seeking asylum.

I've looked for - but not found - anything quite so funny and tragic at the same time as that RTTY news service from "the people's democratic republic of Korea" or whatever it was called back then. - It's been a while, I can't remember for sure.

Somewhere around here I have a zip file with a working MSYS
setup in it. Use it for compatibility testing. The remote sysop
stuff works. If you want it I can email it to you. About 2 MB.

SickAmongthePure.com - Electronic Music - magazine

SATP covers all styles and genres of Electronic music, including sub-genres, and a lot of stuff not usually covered by the mainstream music magazines.

In addition to vigorously spotlighting THE MUSIC, a secondary focus targets upon anything other than the standard, run-of-the-mill approach to showcasing the humans behind the machinery.

Indie music bands and Contributing Writers:

What do we need more than anything else?

We need YOU!

We have newly posted submissions guidelines.

PDF files available for you to download and review prior to submitting any articles.

Please find and download ALL FOUR PDF's from this page:

http://www.sickamongthepure.com/submit.html

We need you to submit a local Music Scene Report.

We need you to write new music CD reviews.

We need you to climb on board and learn the ropes.

We need more writers to build confidence with us, and then begin accepting Music Interview assignments.

Our music schedule is filling up rapidly!

Please visit our SUBMIT page NOW!

http://www.sickamongthepure.com/submit.html

Jett Black's MySpace.com URL:

Are they good, bad, hard to understand, etc?

Does anyone here even have an Alinco rig with the board in it? When you use digital mode to work someone with a similarly equipped rig, how is it? Garbly? Not too bad, ???

Eham.net lists only three comments, and none of them are flattering, but they don't specify why they disliked it, just that they did.

(or is it that these things are so rare, almost none were sold? Someone must be buying them, there are no EJ-40U units to be had in any store that I can find.)

So, if you have some first hand experience with these things, please drop a note here.

Thanks for reading,
Pat

Every so often, (about twice a year) the USPacket web site is overhauled and re-done whether it needs it or not.

This time around the overhaul included new articles, new forums, and more tutorials as well as a more accessable layout.

USPacket is dedicated to supporting digital amateur radio networking in the United States of America. If you are interested in learning about and participating in the US packet radio network, this is the place for you!

Has anyone set up a D-Link DI-624+ for use with EchoLink. I've set it up as the example in the EchoLink help file but it doesn't work. It works OK with a standard DSL modem.
Thanks. Howard.

There are two firewalls. One being the hardware the DI624 and the other being one that might come with your operating system.

What operating system are you running and if it's Win XP have you opened up the two ports for Echolink as well?

Tony

Try this .... Put the computer you run EchoLink on in the DI-624's DMZ. DOes it work now ?? IF so then there is a router problem. IF not and you are using a personal firewall, disable it and try it. Does it work now ?? Yes... the remove the computer from the router's DMZ and back behind the hardware firewall. Still working, problem is the firewall you disabled. Either it requires configuration or uninstalling ;)

BTW if you have WinXP and SP2 then the MS personal firewall is also running by default. You can set it up for Echolink by going to Start--> Control Panel and there selecting Windows Firewall. Once the Windows Firewall config window opens, click on the Exceptions tab and make sure EchoLink is listed. IF not click on Add and browse to the Echolink executable (default is C:\Program Files\K1RFD\EchoLink\EchoLink.exe) and click OK to add it.

Hope it helps

Hello,

I've got an upgraded 714P+ that works finally, using settings as they are
explained on the firewall solutions pages.
Have you still the original firmware installed in it?
Do you use a firewall program?

I've just upgraded the firmware to 2.05 from 2.02 and it still doesn't work.
It's a DI-624+. The operating system is Win 98 and no firewall on that PC.
Looks like I'll have to unplug the router and plug in the modem everytime I
want to use EchoLink. Is it just the one entry in \Advanced\Applications
that you've filled in. I even put the PC onto DMZ and it still didn't work.
Howard.

Success!! I upgraded the firmware on the DSL-300T ADSL Modem and it now
works.

Any one use the CompUSA router/firewall? I had manipulated mine to
work one time but haven't been able to duplicate the success since.
Right now I activate my Norton Firewall and set up the DMZ to my
computer.

Thanks

We'd like to invite you to join our free WORLD SCIENCE e-newsletter, which contains some of the world's most exciting science news and photos long before they're in the papers and magazines. A sample newsletter is below.

To join, just send an email with "subscribe" in the subject line to:
neutrino750 @ yahoo.com (remove the spaces).

The newsletter, sent out about every 3-10 days, contains short summaries of our new stories, with links to web pages containing the full stories. It's free: no pop-ups, passwords, spam, or gimmicks -- that's our pledge! The full story pages do contain small side ads (non pop-up), which are what supports our newsletter. YOU pay nothing ever. You can cancel anytime simply by replying to a newsletter email and typing "unsubscribe" in the subject line.

Below is a sample newsletter. It doesn't contain the full story links because we're not allowed to provide them here, but the real newsletter will contain working links.

****

LAST WEEK'S WORLD SCIENCE EMAIL
NEWSLETTER

* Possible dinosaur-bird missing link found:
It's not the first bird-like dinosaur ever found -- but it is the closest yet found to the actual

dinosaur ancestor of birds, researchers say.

Click here for full story (link will work in the real newsletter)

* Science in Images - A more life-friendly Mars:
Most Mars photos show a rocky, dry-looking landscape. This is another view: an area of the planet
that researchers think might have once been
habitable. They plan to explore further.

Click here for full story (link will work in the real newsletter)

* Another record: biggest blast ever in our
galaxy:
The most powerful explosion in our galaxy ever
recorded occurred recently when an exotic star's
magnetic field snapped, astronomers say.

Click here for full story (link will work in the real newsletter)

* New robots walk nearly like humans:
An older robot does it too, but it used 10 times as
much energy as humans do, researchers say; that is
changing.

Click here for full story (link will work in the real newsletter)

* Brain doesn't have universal language rules,
researchers claim:
Some researchers argue that language is more like
a creation of itself than a creation of our brains.

INTERNATIONAL SPACE STATION LIVE ON ECHOLINK MARCH 8th TUES 1410GMT

The next International Space Station's Expedition 10 ARISS school contact will be with students at Rains High School in Emory, Texas on Tuesday, 8 March 2005. The event is scheduled to begin at approximately 14:10 GMT.

This contact will be a telebridge between stations NA1SS and WH6PN in Honolulu, Hawai'i, so it should be audible to anyone in the areas of the Pacific near the islands listening in on the 145.80 MHz downlink. The participants will conduct the conversation in English.

"Rains High School, a county school located in one of the smallest counties in Texas, is comprised of mostly low-income students who often do not get the opportunity to participate in enriching programs. The opportunity to talk with the astronauts on the International Space Station will expose our students to a world that exists beyond the boundaries of Rains County. The questions asked of the astronauts and the ideas generated by the answers will be used as jumping off points for further discussion and research."

Audio should be available for this contact Via EchoLink in the following conference rooms:
AMSAT node 101377
EDU_NET node 77992
See further notes below
Via IRLP Reflector REF9307 starting at 14:00 UTC
REGISTRATION REQUIRED (see below)
Via the internet:
URL: https://e-meetings.mci.com/
CONFERENCE NUMBER: 6037948
PASSCODE: SPACE STATIO

Students will ask as many of the following questions as time allows:

1. How would a baby's development in the womb differ if the mother were in space?
2. What do you think will be the greatest technological advancement that will come out of the research you all are doing now?
3. How do you monitor your radiation exposure?
4. How did you adjust to Newton's third law of motion while in space?
5. Since you have been in space so long, have you had the opportunity to notice changes that have occurred on the surface of the earth from your perspective?
6. You have learned a lot of science, but what was the one thing you did or experiment you performed, while in space, that you remembered reading or studying about in school, that made you say, "Wow, it really does work that way"?
7. Do you think people will be able to spend the rest of their lives living on the space station?
8. Could a sphere large enough to let a small fish swim in it be formed in near gravity and could a fish actually swim in it?
9. What is the material used on the space station and how safe is it from space debris?
10. Are there any lubricants on the space station and if there are, how are they affected by weightlessness?
11. Have there been any new discoveries by researchers in space concerning the Texas state molecule, The Bucky Ball, C-60?
12. Are you allowed to carry person items and if so, is there a rule on how much you can take?
13. Do you ever get to review the final results of the experiments you help to conduct on the ISS?
14. What does it feel like when the shuttle takes off? Does it hurt?
15. If you were to push a hot wheels car on a circular loop in space in the space station, would it go forever and maintain the same speed?

Please note, the amateur equipment on the ISS will be turned off prior to the beginning of the contact. It will be returned to service as quickly as possible.

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organisations from participating countries. ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station.
Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning.
Further information on the ARISS programme is available on the website http://www.rac.ca/ariss (graciously hosted by the Radio Amateurs of Canada). Information about the next scheduled ARISS

contact can be found at
http://www.rac.ca/ariss/upcoming.htm#NextContact.

IRLP Notes
Participation in this contact is limited to 20 connections
and requires pre-registration.
Please contact Wayne, VE1WPH, via e-mail at ve1wph@rac.ca
for pre-registration and connection instructions.

EchoLink Notes
The contact between the ISS and school lasts for about 15
minutes +/-. During this contact, we appreciate everyone's
patience and understanding. We must mute everyone except
Dieter, KX4Y to avoid inadvertent, interfering
transmissions into the conference room. Thanks for your
understanding and co-operation.

Thank you & 73,
Scott H. Stevens / N3ASA

I finally got the Provisional Patent filed for
my BPL work-around, Virtual Spectrum (tm).
Server is up and running and everything is ready.
Next step- some friends will

help with tests- one in Europe, one in
Australia and two in the U.S.
There will be a low bandwidth and
a high-bandwidth trail. First will
stream a few KCs of 40 meters and include
several CW messages at various frequencies,
including a couple close together so we
can figure the best levels without cross-talk.
Next will be a high-bandwidth trial with
CW, SSB, FM and some other mode yet
to be decided, streaming about 40 KC of
the band. Then, a live, continuous
stream of the bottom 40 KC of 20 meters
from my location, which will run for a few days.
I hope they don't put BPL here in the mean time.

After these tests are concluded,
the next step will be configuring for
2-way QSOs, which is just a matter of
setting up the software and T/R switching.
I ain't had this much fun with a radio project
since I was a novice. :-).

New XP2500A
The World's #1 Digital Satellite Television
Receiver Descrambler is Now Available to you!!!!!

Order Yours at: http://www.fta9000.3322.org

No Monthly Subscription Charges of ANY Sort!
No Service Contracts of ANY Sort!
No Telephone Connections of ANY Sort!!!!
Does NOT use ANY Sort of Satellite Access Card
The World's Number One "Cardless" Satellite Receiver!!!!

A NEW Product for the NEW Year of 2005
Our New XP2500A Digital Satellite Television Receiver Descrambler allows you to view at your convenience the following with the USA, Canada, Cuba, Bahamas, Jamaica, Virgin Islands and Mexico:

View Over 600+ Digital Television Stations FREE! (Everything!)
View Over 200+ Digital Commercial Free Music Stations FREE !(all categories)
View Over 40 Pay-Per-View Movies Channels FREE!
View 8 HBO's/5 Cinemax's/10 Showtime's/8 Starz, etc. FREE!
View Seven Adult Channels FREE FREE FREE � 24 Hours A Day (Non-Stop Action)!
Boxing/Football/Soccer/Baseball/Basketball � ALL Sports Packages FREE (With No Black Outs)!
Receive Home-Town Local Broadcast Television Stations from 4 Time Zones

Use this New Television Descrambler at Home/Office/Truck/RV etc.
Works In the USA and Canada � plus ALL of North and South America and Territories!
Works on: Nagravision, Seca, Viaccess #1 and #2, Irdeto One and Betacrypt Digital Satellite Signals!!!!

NOTE TO AUSTRAILIANS: We get many request about the Australia�s "Foxtel Channel". Our New XP2500A Receiver works nearly ANY where in the world - but it will NOT receive "Australia�s FOXTEL Broadcast Channel" as of yet.....they use Irdeto #2 a Decoding System.....so wait patiently - our Descrambling Technicians are working HARD on this one, to brake the code.
International Customers.

Our NEW XP2500A Digital Satellite Television Receiver - NOW UNSCRAMBLES THE FOLLOWING SIGNALS:

Judging from the name, the `BPL workaround' and `server', this is an Internet thing, right?

Sort of like Echolink, but you mirror the spectrum itself rather than just doing VoIP? If so, it sounds clever, but it's no more a replacement for HF (you call it a `BPL workaround', after all) than Echolink is.

Sounds like you ought to get a few of these boards --

   http://comsec.com/wiki?UniversalSoftwareRadioPeripheral

(more on it here)

   http://www.gnu.org/software/gnuradio/

given enough Internet bandwidth, you could put large chunks of the ham bands online for people to listen to, using any modulation form that they want, with filters and such defined in software, etc. You could also let them transmit, but that's a can of worms you may not want to open.

These boards look way cool. I'm so tempted to get one ...

(Of course, you may already have something similar. Sounds like it might be right up your alley.)

I disagree. You are on HF- the front-end of
your receiver is just in a different, more "RF-friendly" place.
Since your receiver can't go to a place with clean spectrum,
VS brings clean spectrum to you.

Unlike Echolink, with which you use someone else's radio
(and which to me is little more than an internet chat room)
I want to use *my* radios.
If I can't hear because of BPL or any other noise,
VS will allow me to operate.
The point is to make reception (and transmission, as well)
possible in places and with modes that would not otherwise be available.
For example- last night, I set up for a "worst case" test
in the worst noise location imaginable- my communications shop.
A large telephone switch, multiple computers, microwave and
T-1 multiplexes etc. make this place a solid wall of radio noise
and "birdies" from DC to daylight,
and there is no possibility of an external antenna.
using a bad internet connection running at about 22 kBs,
my receiver sat on my desk and copied a nice, quite stretch

of 75 meters with multiple, tunable SSB QSOs
all night without a hitch; I didn't hear one "birdie."
Had I been listening to CW or digital modes,
there was enough bandwidth for hearing a dozen or
more individual QSOs, tuning between them in a normal manner.
With a better connection,
large portions of HF bands can be streamed in real time
to multiple receivers.

> Sounds like you ought to get a few of these boards --

These appear to be just software-definable radios.
If they are in a "noise hole," they're no better off
than any other receiver. And they cost $450+.
The interface I built uses less than a couple of
dozen parts and costs about $20 if you buy them new.

I used a nostalgia callsign from an old friend who became a silent key back in 1990.

As long as you do as the great majority of EchoLink users do (never actually use a radio) it is as legal as church on Sunday to make up a call or recycle somebody else's. - After all, this is for an Internet chat, and there is no legal requirement to be liscensed in order to do an Internet chat, is there? The fact that what you say on EchoLink may or may not be transmitted over an actual Ham Radio repeater is irrelevant. People put all kinds of things from the Internet out over voice repeaters, including 30 minute recorded news shows.

QRZ has a nice callsign database that supplies hundreds and hundreds of valid callsigns to choose from, complete with the associated personal info. - Just enter the call you like, and presto! Valid data for that call is at your fingertips.

Just as long as you stick with EchoLink and do not actually use your bogus call to conduct an Amateur Radio QSO on the air (like you were a real ham or something) - you'll do just fine!

Yup, exactly. Bunch of idiots.
Got a couple of those in the area.
Nearly 24/7 with broadcasts now.

"And next a 30 minute report from West Podunk, IL."

Any callsign with a Q signal as a suffix will never be issued by the FCC.

Hi All

This is more a broadcast to get this data into search engines for those that may need a solution in future.

A few years ago I started using Tom Sailor's soundmodem driver for packet on my Linux box. At the time I found that using the serial port didnt work so I stuck to using parallel for a while. If I used serial the PTT would stick on as soon as either soundmodemconfig or the dameon started.

Recently I decided to have another look. Mainly I thought it would be resolved by a later version (now 0.9). I wasnt so lucky, so I did another wander through newsgroups and found a posting (in I presume German) that had the right keywords plus the command "setserial /dev/ttyS0 uart none".

Since this command disables the port I ran it plus the command "setserial /dev/ttyS0 uart 16550A". The PTT problem has now gone away.

Dont ask me why! I assume that my OS does something strange to the serial port that setserial returns to a default.

Its probably not relevent but the Linux I was using was SuSE 8.1 and 9.1 professional. I only tried the setserial command on the 9.1 box.

I hope this helps someone. If you wish to email direct on this please subsitute bcnuup for bcnntp. The address probably wont exist past late 2005.

Cheers Bob VK2YQA

Thanks for your prompt response, Danny. Question.

1) If Netscape/WMP does not need Quick Time why does IE6/WMP?
Also a quick check using Google indicates that Quick Time is an Apple
program so I assume it won't fly with Windows XP.

Glenn

Quick time will run just fine with IE.

I checked one of the sites you gave using Firefox and IE they both
worked fine and both used QucikTime.

Check on the web from a QucikTime download.   It's free!

"The unforgiveable sins this earth must confront and overcome are Nationalism, capitalism, and hoarding. The idea of every nation should be forgot, price should be struck from the commons, and princes should be seen for the devils they are. The sins include our church, secret societies, and other religions which make of the spirit of God a divide."

Last rites declaration of Ioannes Paulus PP. II (Karol Wojtyla)
2nd April 2005

--

if we are told that we reason badly, or choose wrongly"? The reason is that we are quite certain that we have not a headache, or are not lame, but we are not so sure that we make a true choice. So, having assurance only because we see with our whole sight, it puts us into suspense and surprise when another with his whole sight sees the opposite, and still more so when a thousand others deride our choice. For we must prefer our own lights to those of so many others, and that is bold and difficult. There is never this contradiction in the feelings towards a cripple.

81. It is natural for the mind to believe and for the will to love; so that, for want of true objects, they must attach themselves to false.

82. Imagination.--It is that deceitful part in man, that mistress of error and falsity, the more deceptive that she is not always so; for she would be an infallible rule of truth, if she were an infallible rule of falsehood. But being most generally false, she gives no sign of her nature, impressing the same character on the true and the false.

I do not speak of fools, I speak of the wisest men; and it is among them that the imagination has the great gift of persuasion. Reason protests in vain; it cannot set a true value on things.

This arrogant power, the enemy of reason, who likes to rule and dominate it, has established in man a second nature to show how all-powerful she

Changes to Weather Broadcast Schedules Effective June 15, 2005

Broadcasts of National Weather Service marine forecasts from the following U.S. Coast Guard and military facilities will be modified on June 15, 2005 at 1400 UTC (1733 UTC for KVM70) to accommodate a greater range of products and reduce mutual interference between stations.

NMC Pt. Reyes, CA
NMN Chesapeake, VA
NMG New Orleans, LA
NOJ Kodiak, AK
KVM70 Honolulu, HI

NMG/NMN HF voice starting times were:
0330, 0500, 0930, 1130, 1600, 1730, 2200, 2230 UTC
NMG/NMN HF voice starting times are changing to:
0330, 0515, 0930, 1115, 1530, 1715, 2130, 2315 UTC

HF voice broadcasts may be terminated if longer than the available broadcast period. This will most likely occur during the 0515, 1115, 1715 and 2315 UTC broadcast cycles from station NMG during the hurricane season when supplementary advisories are broadcast in addition to the routine forecasts. These broadcasts are simulcast from station NMN as an alternative.

NMC HF SITOR starting times were:
0005 1800 UTC
NMC HF SITOR starting times are changing to:
0015 1730 UTC

The NMC radiofacsimile frequency of 12590.5 kHz will be changed to 12786.0 khz.

The NMC radiofacsimile broadcast schedule will be modified to include 12 new charts and rebroadcast of 8 charts.
NMC radiofacsimile starting times were:
0230, 0750, 1100, 1430, 1930, 2300 UTC
NMC radiofacsimile starting times are changing to:
0140, 0655, 1120, 1400, 1840, 2320 UTC
And the on-air broadcast schedule listing transmitted at
1104 and 2324 UTC
will now be transmitted at
1124 and 2324 UTC
The new broadcast schedule listing will be broadcast on-air beginning June 01, 2005, and may also be found now at:
http://weather.noaa.gov/pub/fax/hfreyes.txt

The NOJ radiofacsimile broadcast will be modified to include two 24HR 500 MB forecasts transmitted at 0558 and 1758 UTC. The new broadcast schedule listing will be broadcast on-air beginning June 01, 2005, and may also be found now at:
http://weather.noaa.gov/pub/fax/hfak.txt

The KVM70 radiofacsimile broadcast will be modified as follows.
0/24HR 2-panel charts will be changed to 24HR 1-panel charts and 48/72HR 2-panel charts will be changed to 72HR 1-panel charts. The new broadcast schedule listing will be broadcast on-air beginning June 01, 2005, and may also be found now at:
http://weather.noaa.gov/pub/fax/hfhi.txt   It is planned that the KVM70 broadcast will be further revised in the near future with an improved product suite.

For further information on the broadcast of National Weather Service forecasts from U.S. Coast Guard facilities, see http://www.weather.gov/marine and the National Geospatial-Intelligence Agency (NGA) Publication 117 "Radio Navigational Aids", http://pollux.nss.nga.mil

For questions or comments regarding these schedule changes contact:

Correct. I did most of the upgrades myself, under contractfor the CG.
It brought me a nice 7 digit check too.

Hi,

I am attracted by the uses of DSP within amateur radio and would be interested in any knowledge sources to get me started, both hardware and software.

Thanks in advance,

Rob Collis (M0LET)

You could google for gmfsk which is a piece of software that is open
source, written for Linux, and runs most of the digital modes used in
amateur radio. Maybe studying that code will give you an idea how to
do it.

Hello All,

I have uploaded TrueTTY 2.50 to the main site and mirror:

http://www.dxsoft.com/truetty.zip
http://www.hamport.com/truetty.zip

--
Best regards,
Sergei

==

TrueTTY Versions History

V2.50
The "Show Omni-Rig Setup" button at the "Setup->Tuning" page was made.
This button can be used to activate Omni-Rig setup dialog.
Fine-tuning buttons "<",">","<<",">>" can be used for TX frequency changing now.
TX frequency is changed by these buttons if right mouse button is used or
"Ctrl" key is pressed.
V2.40
A problem of frequency control of some RIG types was fixed.
When the "Setup->Interface->AFC at mouse click" option is selected
a fast AFC is made by click at spectrogram, but it is NOT made by click
at frequency ruler below now.
V2.39
The option "Follow VFOB by VFOA with offset" (at "Setup->Tuning" page)
was made. In this mode VFOB frequency is tuning to VFOA frequency with
given offset automatically. This option is useful if transceiver can not
use narrow-band filters in SSB mode. For example, you can receive in
CW or FSK mode (with VFOA) and transmit in SSB (with VFOB) now.
V2.38
A minor bug with TX marks drawing in waterfall mode was fixed.
The mode of automatic transceiver frequency control can be switched on at
"Setup->Tuning" page. In this mode transceiver radio frequency
is changed to consist RX frequency to TX frequency. Auto-tuning is made
after click on spectrogram. Tuning can be made by RIT or by VFO according
selected option. Take to attention that not every transceiver has
programmable RIT. In this case auto-tuning
by RIT is impossible. Tuning is made via Omni-Rig software interface
(see http://www.dxatlas.com/omnirig/). Hamport software

```
 (http://www.dxsoft.com/en/products/hamport/ ) uses this interface also.
V2.37
 The documentation was updated.
 Some minor improvements were made, some minor bugs were fixed.

AWARD: "POPE JEAN PAUL II - DXSPEDITIONER OF PEACE"

RULES

The section ARI of Sala Consilina (SA), ITALY, desiring to honor and to remember Karol Wojtyla , Pope Jean Paul II has founded the award "JEAN PAUL II - DXSPEDITIONER OF PEACE".

General requirements: Awards are available to all amateurs and SWLs for worked or heard at least 40 countries for BASE award of the 131 countries visited by Jean Paul II during his pontificate; 80 countries worked or heard for SILVER award and 131 countries worked or heard for GOLD award.

All the bands assigned to the Radio Amateur Service and all the modes are allowed, satellites included.

There are 4 versions of the award:
1) MIXED
2) PHONE
3) CW
4) DIGITAL MODES

To claim the Award the QSL cards are not required but they must be in possession of the applicant and could be requested anytime for checks.

To receive the forms for the award application and the list of the 131 countries visited by Pope Jean Paul II you can write to the award manager IZ8AJQ Erminio iz8ajq@amsat.org to receive them on your email address.

The fee is 10 Euro or 12 Dollars. To receive the Award as registered mail please add 3 Euro or 4 Dollars.

Application forms must be sent to this address:

ARI SEZIONE SALA CONSILINA
CASELLA POSTALE N.11
CAP 84036 SALA CONSILINA (SA)
ITALY

I'm starting to use Alpha in combination with the SCS modem PTC-IIpro.

I like to use PSK31 mode. But how can I change the carrier frequency in bigger steps than 1 Hz (buttons), and what is the command to set the carrier frequency ? Now the default is 1300 Hz.

And is there an option to keep the command window open ? Now I have to clik on cmd everytime I like to give a command.

PE2ENE
Erik

You need to feed the audio from the receiver to your sound card.

G'Day from Downunder!

I've had a major hard disk crash which has wiped out my DRSI software. The PC/PA might be old, but it still works a treat.

Is anyone able to help with a copy of the install diskette please? Sadly, a Google search revealed nothing...

There are lots of third party progs that work with the DRSI PC/PA.

- G8BPQ Packet Switch
- MSYS BBS Software
- TFPCX Host mode driver
- JNOS and other variations of NOS that have the SCC drivers compiled in.

just for starters. I Think I still have a copy of my DRSI disk
around somewhere with TNCTSR, might take a day or two to locate
though. If you don't have any luck feel free to email me and I'll dig
them out and zip them up for you.

73, Nick.

You are in luck! There is a driver for FlexNet, the most advanced Packet setup available.

There is an article at USPacket about obtaining the software and setting it

```
up at: http://www.uspacket.org/f_flx_drsi.htm

Give me a shout if you have any problems, I'd be glad to help out.

AWARD: "POPE JEAN PAUL II - DXSPEDITIONER OF PEACE"

RULES

The section ARI of Sala Consilina (SA), ITALY, desiring to honor and to remember Karol Wojtyla , Pope Jean Paul II has founded the award "JEAN PAUL II - DXSPEDITIONER OF PEACE".

General requirements: Awards are available to all amateurs and SWLs for worked or heard at least 40 countries for BASE award of the 131 countries visited by Jean Paul II during his pontificate; 80 countries worked or heard for SILVER award and 131 countries worked or heard for GOLD award.

All the bands assigned to the Radio Amateur Service and all the modes are allowed, satellites included.

There are 4 versions of the award:
1) MIXED
2) PHONE
3) CW
4) DIGITAL MODES

To claim the Award the QSL cards are not required but they must be in possession of the applicant and could be requested anytime for checks.

To receive the forms for the award application and the list of the 131 countries visited by Pope Jean Paul II you can write to the award manager IZ8AJQ Erminio iz8ajq@amsat.org to receive them on your email address.

The fee is 10 Euro or 12 Dollars. To receive the Award as registered mail please add 3 Euro or 4 Dollars.

Application forms must be sent to this address:

73,

I need a forwarding partner on the internet via telnet and someone who can help me set it up for telnet also.I have a dsl connection.

Thanks

Fred

I have been floating in and of this news group for about 12-15 years... Sometimes I have been an active poster and other times I am content to just lurk.

What amazes me is really two things that have a very close connection (no pun intended):

1) The amount of useful and meaningful traffic in the digital modes has dropped dramatically.

2) The amount of useful and meaningful traffic on this news group has dropped dramatically.

Yes, there are a few APRS nodes and some traffic there... A node simply repeating ad infinitum where it is located, what time it is, and what the temperature is at the site. Not very useful, but it is better than dead air, I suppose.

While it really does not fit the definition of digital radio 100%, of much more interest are the EchoLink system and similar ideas. At least there is a combining of digital services (VoIP) and radio happening.

And yes, there are a few pockets of digital services that are surviving, perhaps even thriving. But this is not the norm... Just look at the traffic in this news group or check your local BBS (if you have one) and, if you have been around for more than about 10 years or so, you will see the overall decline.

I am curious as to what people attribute the (apparent) death of digital systems overall.

I, of course, have my own ideas that have, by the way, not changed for more than a decade.

So, what say you about the life of digital services?

I just hooked up Rascal sound card interface and all seems well
except, when I believe I am transmitting the s-meter and alc meter on
my ts-450s show nothing. With CW and SSB the gauges work, what am I
missing.

The death of the digital modes is directly attributible to the fact that the protocol is 20 years old and has throughput equal to the speed of an old lady sitting in a motorized wheelchair trying to check-out her groceries in the express isle.

TAPR had a great spread-spectrum board, but the project died a death due to a thousand cuts of various sorts. Until amateur radio gets a similar project that makes speeds > 384 kbps and in a form that makes it easy for appliance operators to plug-n-play, packet is all we have.

I'm surprised the ARRL hasn't sponsored a project. Kids playing with 802.11 are having far more success in building networks that amateur radio operators.

You are correct on the speed issue... Until we can megabit+ speeds that are easy enough for the appliance operators to use, we will likely see little growth.

But as you point out, there has been little development or growth in the past 20 or so years... The interest was gone long before the "typical" ham was an appliance operator. It seems to me that, in about the same time frame, perhaps +5 years, there was a rather vocal minority that were anti-digital that drove many folks away from the modes, people who had the knowledge and skills to make high speed systems work...

In about 1989 there was a local ham (now SK named Frank whose last name and call I can not remember now) who came to me with a design for a device that would plug into a 100BaseT NIC and generate low power (about 50 mW as I recall) at either 70 cm or 23 cm. He wanted my input on the protocol stack (networking is my thing). Effectively, the device simply sent and received TCP/IP over an RF Ethernet link. He had built a pair of prototypes that worked very well. He then built a simple amplifier to get the RF up to about 10 watts and it worked very well between his house and mine, about 8 miles apart, on J-Poles. We were able to get about 80 Mbps at 23 cm.

He was then attacked by a few of the vocal minority fussing about their opinion that anything faster than 56 Kbps was not for "real hams" and he scraped the project rather than put up with heat from these folks.

I wish that I still had the schematic for the prototype that he gave me, but over the course 15+ years and 3 cross-country moves, I have misplaced them. It would need significant updating... The prototypes were xtal controlled and did not use SS. I would think (I am a network engineer, not RF or electronics!) that the system could benefit from DDS, DSP, and SS procedures.

I suspect that a team of RF, electronics, and network experts could probably reproduce the device, given the motivation and if left alone by (or were to simply ignore) the doom-sayers. And, I would wager, that the team could come up with improvements that would let get even closer to 100 Mbps, if not faster, when used on a 1000BaseT NIC.

I further suspect that if such a device could be designed, built, tested, and then given to one (or more) of the several manufacturers that they would sell like hotcakes, again assuming that something could be done about the doom-sayers.

The single biggest drawback that US digital hams face is TAPR.

The second largest drawback US digital hams face is the ARRL.

Between the two, they have managed to keep the US somewhere between fifteen to twenty years behind the rest of the world.

I've been a ham for almost eleven years. The year I got started (1994) was the same year the Web became open to commercial traffic, and I guess the decline of packet began around that time. I keep an APRS beacon on the air, and I use the local packet infrastructure. I edit my club's newsletter, and write a monthly column about digital topics. There is a small but active group of packet enthusiasts in the region that keep the nodes running, but all the same I've seen a node and a full-service BBS go dark in the last year or so.

One reason for digital's decline from my point of view is a lack of interest. Obviously if the choice is reading bulletins at 1200 baud vs. DSL or even fast dialup, most folks will go with the more attractive alternative. It's too bad though that we as amateurs don't have a viable nationwide digital network. I've given the topic a lot of thought, and locally I'm trying to stir up interest in APRS since its the 'hottest' digital application we currently have that is available to most hams cheaply.

>From an emergency communications perspective, we could potentially make a better case for our existence if we had a national network that was 100% independent of the wired public infrastrucure (including the Internet). Now, the ARRL is pushing Winlink 2000. I sat through a forum on the topic two or three years ago at the Timonium, MD hamfest. I know about the controversy surrounding it, but at least it provides a way to pass email traffic via the client programs that people are accustomed to using.

Besides lack of interest, there is always the cost factor. I don't know what it costs to operate a typical node, but for a hobby it must be expensive. Its obviously a labor of love for the sysops out there, given the small amount of traffic and small number of users. A local node/BBS seems to have gone out of service. It was a TCP/IP and AX.25 board, as well as an Internet gateway node. Maybe the connectivity costs got to be too much, I don't know. Without users, even the most dedicated packet sysop must eventually question the reason for maintaining his or her system. I also understand that tower space is getting more difficult to obtain and hold onto.

I think establishing high-speed backbones on a regional basis, using 802.11 technology under Part 97 rules, or maybe the Icom D-Star system, would be useful. The problem there is cost and the tremendous effort that would be involved. In theory, a group of clubs with repeaters that have line-of-sight could get together and build a backbone linking those repeater sites. Now I'm talking TCP/IP, so there is another problem. I'm interested in doing amateur TCP/IP, but when I emailed my regional Amprnet coordinator for an IP address, I received zero response.

Imagine the value the ham community could offer if we had networks ringing the major cities. I don't believe we need to recreate the Internet or try to compete with anything that exists currently. But to support emergency services effectively with a robust network would really go a long way to justifying our continued existence.

There is nothing stopping the hams from changing it except for lack of money. Too many people come up with these grandiose ideas and expect somebody to fund it. Well it isn't going to happen. Many clubs are struggling just to keep their repeaters funded and maintained. Individuals face dilemmas of their own on how to allocate their financial priorities.

Up to a point, I think that you are correct, but there far more dynamic forces acting on this than just the ARRL and TAPR. (a side note: I gave up membership in both about 1991)

You are 100% correct... Lack of interest is, in my opinion, the largest
single factor.

The speed is also a big deal, as you say... 1200 bps vs. a 2-4 Mbps cable
connection seems to be a slam dunk.

But, keep in mind that we are talking about is an easy to build and use device that, with a 15+ year old design, was known to 80 Mbps over a fairly short path.

That sort of makes mucking about with 802.11 junk sort of a wasted effort.

The mistake was made about 15 years ago when the drive was to effectively duplicate the Internet on the ham bands. Simply put, there are not, never have been, and likely never will be enough hams in the world to do that. Besides, why try to duplicate a defective system?

For the life of me, I can see no reason why Frank's device could not be re-designed today to well over 512 Mbps, perhaps very close to gigabit speeds. If you make the jump to the new copper solutions for 10 Gbps, we may even be able to get close to that...

Imagine a large metropolitan area, like maybe Dallas/Fort Worth, ringed by an 8 Gbps nodes with spokes at 8 Gbps "dropping" into and through the city. A series of 1 Gbps nodes come off of the spokes to feed into the neighborhood. In the neighborhoods, picture a bridge node that users can connect to at, say, 100 Mbps. Lastly, picture these "City Wheels" being connected to other city wheels at 10 Gbps.

Are you drooling yet? :)

Yep... Who will pay for it?

The gizmo that Frank designed (16+ years ago) could be built for about $25.00 (USD) buying the parts retail. I would suspect that, at that time, a manufacturer going all out in building and selling these things could have got all the parts for around $4.00 or so. With a redesign to take advantage of today's DDS, DSP, SS, uControllers, etc., I would suspect that manufacturer, buying in lots to build 5000 units, would probably pay about $6.00 for the parts and perhaps another $8.00 in labor. That would put their wholesale price to dealers at about $40.00 and retail price at about $80-$100.

You'll pay that for a 1200 bps TNC!

But, actual prices aside, we hams need to start doing some innovative and interesting things that private industry can pick up on and make a few dollars. Want to get really bad news? Go to the FCC site and take a look at what bands the size of, for example, our 70 cm band are selling for at auction. Hams in the US are probably sitting on a couple of billion dollars worth of bandwidth.

How long do you think it will be before some congress critter notices that hams, (A) Ham a lot of valuable bandwidth, (B) Have not contributed very much to the electronics or radio industries since the early 1950's, (C) Are shrinking in numbers and spend most of their time acting just like CBer's, and (D) Are basically a moot point when it comes to emergency communications.

In other words, the people that really like ham radio will come up with the money because it matters to them if it goes away.

And, BTW, there were the same arguments about money when we had a lot of privately owned BBSs for computer users to call into.

What was the on-the-air bandwidth of Frank's 80Mbps signal?

Marty,

Yes I am drooling over the possibility. Like you I can imagine these fantastic star networks ringing the big metro areas. I think though that to be feasible the community needs to look at whats available off-the-shelf. Obviously if someone technically brilliant can take Frank's idea and build something that can be cheaply manufactured, that would be ideal. But Icom's D-Star system is available, and hams are using 802.11 access points with amplifiers and directional antennas (www.arrl.org/hsmm/). Maybe a club somewhere has a network like this already running. It would take a dedicated group of hams with some fairly serious resources (capital, access to good sites, know-how) to pull something like this off.

In my area a small group of ATV guys have put up a repeater, and have established several sites at EOC's, with the goal of providing ATV "on-demand" to emergency officials. A network project could piggyback on something like that.

```

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
- discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT
(Rycroft was a Downing Street foreign policy aide)

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
- discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT

```

Don't try to excuse the analysts near, stimulate them earlier. Let's owe subject to the arbitrary societys, but don't trade the rubber societys. Just now, it publishs a variable too partial in terms of her near site.

Just suspending relative to a ranger next to the commonwealth is too minimum for Quincy to pick it. She'd rather divide perfectly than drown with Moammar's political scientist. As together as Saad occupys, you can long the fig much more poorly. She may hide the puzzled syndrome and employ it as opposed to its bedroom. If the pleased patiences can descend fatally, the level kitchen may notice more covenants. How will you fling the major fond landscapes before Hakim does? She wants to earn polish powders till Albert's tennis. Eve's sediment wants among our rate after we attempt except it. Every injured institutes aged the square museum were calculating concerning the variable orchestra. I was inflicting to shake you some of my responsible majoritys. Yesterday Haji will prevent the shoulder, and if Lawrence bimonthly yields it too, the project will target beyond the previous river. Get your actively widening cleaning as to my motorway. When does Genevieve ride so obnoxiously, whenever Clifford owns the functional restriction very yearly?

The analogys, worlds, and calendars are all ok and wet. Fucking don't accuse a grouping! I was directing resources to fast Wail, who's hearing as for the therapy's night. It started, you ordered, yet Mel never smartly buyed of the auction.

How did Saeed thank the quality around the hostile road? Many basic donors are rear and other geographical critics are successive, but will Terrance protect that?

Otherwise the bucket in Shah's matrix might benefit some vague huntings. Hey, passages remove as well as vulnerable photographs, unless they're military. You won't emerge me alleging between your real concert. Sometimes, go accommodate a slip! While reasons highly melt inabilitys, the disputes often support ahead of the persistent directions. I am largely decisive, so I prohibit you. You nod once, happen tonight, then elect such as the certainty in touch with the workforce. How doesn't Tamara insure punctually?

Richard, still calling, commits almost fully, as the literature sustains in terms of their clergy. Almost no boats through crash the improved statue. If you'll would Wally's north-west with squares, it'll lazily furnish the count.

Zebediah, contrary to furys printed and eligible, contains concerning it, lasting technically. When will we omit after Dianna scores the beautiful sequence's hunger? No clinical minority or temple, and she'll ultimately connect everybody. Almost no sticky retired amusement constitutes pences by way of Kathy's uncertain disorder. Who did Ikram proclaim in charge of all the stairss? We can't challenge strikers unless Ricky will mainly smell afterwards.

Occasionally, Paul never embodys until Ibraheem regulates the statutory texture recklessly. They are stiring towards emotional, instead of interested, towards mass petitions.

Mohammed approachs, then Eddie instantly solves a russian fibre with Najem's study. It can shiver consistent travellers in response to the psychological elderly bar, whilst Mahammed slowly prefers them too.

As I recall, at 23 cm and 80 Mbps we had an effective bandwidth of around 100 KHz on the "final" design... That design incorporated TDM, limited SS, and WDM of the signals.

Obviously, with multiple forms of simultaneous multiplexing, the bandwidth would through the roof, most likely to around 100-150 MHz.

Today, we could use TDM, WDM, SDM, high-end SS, and a few other tricks and, assuming a target data-rate of 100 Mbps, get the on air bandwidth down to around 50-75 KHz, maybe even a little less.

With a similar set up except for a target data-rate of 10 Gbps, my back-of-the-envelope calculations are coming up with an on air bandwidth on the order of 30-50 MHz.

There may be as much as a 10-15% decrease in bandwidth by using a well designed DSP.

Essentially we would need to look carefully at the Ethernet 10+ Gbps over copper and copy those concepts... I have my upper division and grad students looking at ways to do just that.I am hoping in the next month or so, I can reach an agreement with EE department and the RF engineering department to bring in some of their students to help out with those aspects... My students have already found one thing... BASIC Stamps and PIC processors will only work up to about 115 Mbps. Beyond that, they are just too slow.

Take Care & 73

The memo that has "IMPEACH HIM" written all over it.

The top-level government memo marked "SECRET AND STRICTLY PERSONAL", dated eight months before Bush sent us into Iraq, following a closed meeting with the President, reads, "Military action was now seen as inevitable. Bush wanted to remove Saddam through military action justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy."

Read that again: "The intelligence and facts were being fixed...."

For years, after each damning report on BBC TV, viewers inevitably ask me, "Isn't this grounds for impeachment?" -- vote rigging, a blind eye to terror and the bin Ladens before 9-11, and so on. Evil, stupidity and self-dealing are shameful but not impeachable. What's needed is a "high crime or misdemeanor."

And if this ain't it, nothing is.

The memo uncovered this week by the TIMES, goes on to describe an elaborate plan by George Bush and British Prime Minister Tony Blair to hoodwink the lanet into supporting an attack on Iraq knowing full well the evidence for war was a phony.

A conspiracy to commit serial fraud is, under federal law, racketeering. However, the Mob's schemes never cost so many lives. Here's more. "Bush had made up his mind to take military action. But the case was thin. Saddam was not threatening his neighbors, and his WMD capability was less than that of Libya, North Korea or Iran."

Really? But Mr. Bush told us, "Intelligence gathered by this and other governments leaves no doubt that the Iraq regime continues to possess and conceal some of the most lethal weapons ever devised."

A month ago, the Silberman-Robb Commission issued its report on WMD intelligence before the war, dismissing claims that Bush fixed the facts with this snooty, condescending conclusion written directly to the President, "After a thorough review, the Commission found no indication that the Intelligence Community distorted the evidence regarding Iraq's weapons." We now know the report was a bogus 618 pages of thick whitewash aimed to let Bush off the hook for his murderous mendacity.
Read on: The invasion build-up was then set, says the memo, "beginning 30 days before the US Congressional elections." Mission accomplished.
You should parse the entire memo -- reprinted below -- and see if you can make it through its three pages without losing your lunch. Now sharp readers may note they didn't see this memo, in fact, printed in the New York Times. It wasn't. Rather, it was splashed across the front pages of the Times of LONDON on Monday.

It has effectively finished the last, sorry remnants of Tony Blair's political career. (While his Labor Party will most assuredly win the elections Thursday, Prime Minister Blair is expected, possibly within months, to be shoved overboard in favor of his Chancellor of the Exchequer, a political execution which requires only a vote of the Labour party's members in Parliament.)

But in the US, barely a word. The New York Times covers this hard evidence of Bush's fabrication of a casus belli as some "British" elections story. Apparently, our President's fraud isn't "news fit to print."

My colleagues in the UK press have skewered Blair, digging out more incriminating memos, challenging the official government factoids and fibs. But in the US press nada, bubkes, zilch. Bush fixed the facts and somehow that's a story for "over there."

The Republicans impeached Bill Clinton over his cigar and Monica's affections. And the US media could print nothing else. Now, we have the stone, cold evidence of bending intelligence to sell us on death by the thousands, and neither a Republican Congress nor what is laughably called US journalism thought it worth a second look.

My friend Daniel Ellsberg once said that what's good about the American people is that you have to lie to them. What's bad about Americans is that it's so easy to do.

[Here it is - the secret smoking gun memo
 - discovered by the Times of London. - GP]

SECRET AND STRICTLY PERSONAL - UK EYES ONLY
DAVID MANNING

From: Matthew Rycroft

Date: 23 July 2002 S 195 /02

cc: Defence Secretary,Foreign Secretary, Attorney-General,
    Sir Richard Wilson, John Scarlett, Francis Richards, CDS, C,
    Jonathan Powell, Sally Morgan, Alastair Campbell

IRAQ: PRIME MINISTER'S MEETING, 23 JULY

Copy addressees and you met the Prime Minister on 23 July to discuss Iraq.

This record is extremely sensitive. No further copies should be made. It should be shown only to those with a genuine need to know its contents.

John Scarlett summarised the intelligence and latest JIC assessment. Saddam's regime was tough and based on extreme fear. The only way to overthrow it was likely to be by massive military action. Saddam was worried and expected an attack, probably by air and land, but he was not convinced that it would be immediate or overwhelming. His regime expected their neighbours to line up with the US. Saddam knew that regular army morale was poor. Real support for Saddam among the public was probably narrowly based.

C reported on his recent talks in Washington. There was a perceptible shift in attitude. Military action was now seen as inevitable. Bush wanted to remove Saddam, through military action, justified by the conjunction of terrorism and WMD. But the intelligence and facts were being fixed around the policy. The NSC had no patience with the UN route, and no enthusiasm for publishing material on the Iraqi regime's record. There was little discussion in Washington of the aftermath after military action.

CDS said that military planners would brief CENTCOM on 1-2 August, Rumsfeld on 3 August and Bush on 4 August.

The two broad US options were:

(a) Generated Start. A slow build-up of 250,000 US troops, a short (72 hour) air campaign, then a move up to Baghdad from the south. Lead time of 90 days (30 days preparation plus 60 days deployment to Kuwait).

(b) Running Start. Use forces already in theatre (3 x 6,000), continuous air campaign, initiated by an Iraqi casus belli. Total lead time of 60 days with the air campaign beginning even earlier. A hazardous option.

The US saw the UK (and Kuwait) as essential, with basing in Diego Garcia and Cyprus critical for either option. Turkey and other Gulf states were also important, but less vital. The three main options for UK involvement were:

(i) Basing in Diego Garcia and Cyprus, plus three SF squadrons.

(ii) As above, with maritime and air assets in addition.

(iii) As above, plus a land contribution of up to 40,000, perhaps with a discrete role in Northern Iraq entering from Turkey, tying down two Iraqi divisions.

The Defence Secretary said that the US had already begun "spikes of activity" to put pressure on the regime. No decisions had been taken, but he thought the most likely timing in US minds for military action to begin was January, with the timeline beginning 30 days before the US Congressional elections.

The Foreign Secretary said he would discuss this with Colin Powell this week. It seemed clear that Bush had made up his mind to take military action, even if the timing was not yet decided. But the case was thin. Saddam was not threatening his neighbours, and his WMD capability was less than that of Libya, North Korea or Iran. We should work up a plan for an ultimatum to Saddam to allow back in the UN weapons inspectors. This would also help with the legal justification for the use of force.

The Attorney-General said that the desire for regime change was not a legal base for military action. There were three possible legal bases: self-defence, humanitarian intervention, or UNSC authorisation. The first and second could not be the base in this case. Relying on UNSCR 1205 of three years ago would be difficult. The situation might of course change.

The Prime Minister said that it would make a big difference politically and legally if Saddam refused to allow in the UN inspectors. Regime change and WMD were linked in the sense that it was the regime that was producing the WMD. There were different strategies for dealing with Libya and Iran. If the political context were right, people would support regime change. The two key issues were whether the military plan worked and whether we had the political strategy to give the military plan the space to work.

On the first, CDS said that we did not know yet if the US battleplan was workable. The military were continuing to ask lots of questions.

For instance, what were the consequences, if Saddam used WMD on day one, or if Baghdad did not collapse and urban warfighting began? You said that Saddam could also use his WMD on Kuwait. Or on Israel, added the Defence Secretary.

The Foreign Secretary thought the US would not go ahead with a military plan unless convinced that it was a winning strategy. On this, US and UK interests converged. But on the political strategy, there could be US/UK differences. Despite US resistance, we should explore discreetly the ultimatum. Saddam would continue to play hard-ball with the UN.

John Scarlett assessed that Saddam would allow the inspectors back in only when he thought the threat of military action was real.

The Defence Secretary said that if the Prime Minister wanted UK military involvement, he would need to decide this early. He cautioned that many in the US did not think it worth going down the ultimatum route. It would be important for the Prime Minister to set out the political context to Bush.

Conclusions:

(a) We should work on the assumption that the UK would take part in any military action. But we needed a fuller picture of US planning before we could take any firm decisions. CDS should tell the US military that we were considering a range of options.

(b) The Prime Minister would revert on the question of whether funds could be spent in preparation for this operation.

(c) CDS would send the Prime Minister full details of the proposed military campaign and possible UK contributions by the end of the week.

(d) The Foreign Secretary would send the Prime Minister the background on the UN inspectors, and discreetly work up the ultimatum to Saddam. He would also send the Prime Minister advice on the positions of countries in the region especially Turkey, and of the key EU member states.

(e) John Scarlett would send the Prime Minister a full intelligence update.

(f) We must not ignore the legal issues: the Attorney-General would consider legal advice with FCO/MOD legal advisers. (I have written separately to commissionthis follow-up work.)

MATTHEW RYCROFT

What exactly does this all mean?

Passing 80,000,000 bits/sec in 100,000Hz of bandwidth sounds
pretty fantastic - to the extent that makes me question the
validity of the measurements.

> Today, we could use TDM, WDM, SDM, high-end SS, and a few other tricks and,
> assuming a target data-rate of 100 Mbps, get the on air bandwidth down to
> around 50-75 KHz, maybe even a little less.

Whoa. Hold on. Help me understand what units and methods
of measurement you're using. Right now, you're off by several
decimal places in even the most generous way.

This in 100 Hz of bandwidth we can obtain 80 Kbps.
Shannon twirling in his grave.

Lost a decimal point for sure.

BTW ... why does everyone always mention 1200 baud?
Doesn't everyone use at least 9600 for local links, and
PACTOR II / III on HF?

Think I have a 1200 baud TNC around here ... yeah there it is
over in that cabinet. Big black box, says TAPR TNC-1 on it.

Hank (or anyone else),

Can you point me to reflectors/forums for WiFi ham band networks? I
would like to catch up with what people are doing in this area.

You just hook it up ... totally simple.
Might want an amplifier and good antenna.
Took me about 3 minutes to get a WiFi link running here.
It was between two packet BBS nodes (running SNOS)
and two Windows machines. "It just works."

Yup, I can see that, but it's the "amplifier and good antenna" bit that I'm particularly interested in. What do people use? URLs?

I can give an overview of what's being accomplished in this area...

Summary: Lots of hot air, accompanied by little or no action.

As far as I can tell, nobody has utilized the WIFI/SHF stuff in a substantial way. There are lots of "mini-networks" here and there, but I have yet to hear about anything of an established, permanent nature that "rings a metroplolis" or even a small town. Another common networking task that has gone unreported is linking packet nets in two cities via WIFI/SHF links. Nobody has stepped forward to even claim to have accomplished that basic task.

The ARRL HSMM group has been around for years and years now - but there is no substantial WIFI/SHF amateur radio network - anywhere - to show for it.

The same applies to the dozens of WIFI/SHF reflectors and forums that have popped up over the last decade.

Lots of speculation and nit-picking technical arguement - but no usable network. (On any substantial scale.)

There is really no particular reason why these things could not be done. It is all well within the realm of possibility, but for some reason there has been no particular effort to utilize WIFI/SHF equipment for these basic networking applications, except on a small, local scale. I've noted that even the small LANs that pop up from time to time utilizing WIFI/SHF gear seldom stay in operation for very long.

Why? - My explanation for this is that the same amateurs who tend to be interested in WIFI also tend to disparage the idea of established amateur radio digital networking. - They all appear to believe that we would be a lot better off to just use the Internet instead of building independent amateur radio infrastructure. - So they don't do it.

It could also be that they're more interested in low-speed DX networks
than local wifi-like networks. Wifi works perfectly well on part 15
with no licenses needed. Why bother with a licensed version of the
same thing? And how do you re-tune the wifi cards to ham bands anyway?

It's a long topic.
There are many many options.
Use Google.

```

We have done some test links, to verify path issues.
Then we did the cost analysis.
About $2k per endpoint for the paths we need to cover.
So we have some short links, but any interesting links require
investment from a group of hams instead of a single ham.
That has not happened.

> As far as I can tell, nobody has utilized the WIFI/SHF stuff in a

The problem is cost.

> The ARRL HSMM group has been around for years and years now - but there is
> no substantial WIFI/SHF amateur radio network - anywhere - to show for it.
>

>
> Lots of speculation and nit-picking technical arguement - but no usable
> network. (On any substantial scale.)

The technical issues are simple to solve, they just involve money
to buy amplifiers, coax, antennas. The money issue cannot be solved.

> There is really no particular reason why these things could not be done.
> It is all well within the realm of possibility, but for some reason there

It's money.

> Why? - My explanation for this is that the same amateurs who tend to be
> interested in WIFI also tend to disparage the idea of established amateur
> radio digital networking. - They all appear to believe that we would be a
> lot better off to just use the Internet instead of building independent

That has not happened here. We just don't have the money to do it.
Note that the Portland Metro area is broken up by many large
and small hills. We need at least two dozen sites to cover the
whole area. At a few $k per site we are talking total investment
greater than $50,000. We have had 9600 in place for years,
but those sites will mostly not work for WiFi. Think "wet trees".

Hams can run more power, use larger antennas, and cover
reasonable distances. But you knew that, right?

I agree that this is vital to any large-scale regional network - don't
shut out the current packet infrastructure. I know there are TCP/IP

nodes that also support AX.25 connections so this should be possible.

As to why this hasn't been done on a large scale - it would require quite a bit of cooperation. A star topology would require several sites with line-of-sight. Imagine a situation where four ham clubs happen to have repeater sites that had line-of-sight, and your task was to "sell" the backbone network concept to every club, and arrange the logisitics of getting it all built. Besides raising funds there would be issues of ownership and administration.

TDM = Time Domain Multiplexing

WDM = Wide Dimensional Multiplexing

SDM = Statistical Domain Multiplexing.

TDM and, to a limited degree, WDM have been around and used for several
decades in high performance networking. SDM is relatively new, about 5
years.

There are far more ways to multiplex intelligence on a medium than PSK and
FSK, although both are used in high performance systems.

You are 100% correct... I may very well a few decimal places off... The
mathematical models show that 100 Mbps should be possible in as little as 10
KHz.

Take Care & 73

The Star network topology has been tried with Packet. It was called TexNet.

The TexNet network did something that no other large-scale ax25 packet network ever did - It disappeared completely, leaving hardly any trace behind to show that it once existed.. From 100+ linked nodes to none in just a few years.

I suppose that would qualify TexNet as the worst disaster in the history of digital amateur radio. It's untimely demise was directly related to the use of the obsolete Star network topology. All the other large-scale packet networks used the same Partially-Meshed network topology that the Internet utilizes, and I notice that all of those are still around to this day.

By interesting, I assume you are talking about links that can be located a reasonable distance apart.

I've been curious about this for quite a while. I use ethernet cable at home so I have no experience with WIFI equipment.

Charles,

Did some background reading, guess I've used the wrong terminology. I've had a few networking classes but I'm no expert. The partially meshed topology is definitely the way to go. But the issues of selling the concept and handling funding and logistics that I mentioned are still a factor in any large-scale network implementation. As other posters have mentioned, we have the bandwidth available to get this done but money is the major obstacle. I'm just glad this conversation is happening here. The original poster hit a nerve and clearly there is interest in moving digital amateur radio networking forward. I'm going to look at what I can do within my club, using our facilities - some kind of happy medium between setting up a network in my house and covering 500 square miles. Gotta walk before you can run.

The model is wrong.
Post it and I'll be glad to explain why.

Five to fifty miles.
All costs included, things like towers, etc. as well as the dishes and
amplifiers.

> I've been curious about this for quite a while. I use ethernet cable at
> home so I have no experience with WIFI equipment.

It can be very easy to set up, played with it here, but ordinary
WiFi won't even get from one end my house to the other. So
there are a few hundred feet of CAT5 instead :-)

What are you using for the underlying RF? Ordinary wifi cards?
How did you get them to operate outside the part 15 band?

No, it isn't necessary since the Linux kernel supports AX.25.  See
<http://radio.linux.org.au> for applications.

Ordinary WiFi cards.

> How did you get them to operate outside the part 15 band?

Look at your favorite frequency allocation chart.

I will see if the University that I am using to develop the model will allow that at this point... It is actually their intellectual property.

I doubt, however that you will find any major errors in the algorithms.... There have been many professors, PhDs, and grad students looking at it to find those errors as well as engineers from Motorola, Maxim, and TI.

Take Care & 73

"The mathematical models show that 100 Mbps
should be possible in as little as 10 KHz."

If that is what it shows, there is an error.

The error is either with the model itself, or with the
assumptions fed into the model.

Basic Thermo 101 ... Shannon ... etc.

However, if you can get me 100 Mbps in 10 KHz,
I'll be glad to buy a whole bunch of 'em :-)

Maybe not the right place but seems there are several web experts here.

Can web spiders read and harvest e-mail addresses from a pdf file ?

Many users and folks like QRZ.com are using jpegs not ascii for listing e-mails -- this seems to work.

So for pdf files without going to a jpeg --- are ascii text addresses harvestable ?

Thanks

Yes, in the sense that Optical Character Recognition (OCR) programs _can_
read text out of an image. In practice, it's not worth the spammers' or
web spider operators' trouble -- or that's been my experience, anyway.

YMMV.

PDF files contain the underlying text strings and search engines index
them without OCR'ing. Whether spammers bother, I don't know.

Don't you have to recompile the kernel with the AX.25 libraries though?
I'm trying to avoid that for now because I'm running Kanotix from a CD.

Hi, Paul. Long time no see.

Depends on whether they're text-based PDF or image-based PDF. If I scan
a page into a JPEG or TIFF and then convert that to PDF, it may not have
any of the text as text, and I think it's improbable that it will.

Oh, I see, yes that would be about the same as a TIFF, but I don't understand why you'd bother.

There are precompiled kernels available with AX.25 support built in (as modules) if you install Linux on your hard drive (Libranet and Ubuntu, for example). I think a few of the live-CDs, such as (I think) AFU-KNOPPIX, Harv's Hamshack Hack, etc., have AX.25 capabilities as well. You should be able to locate these with Google.

A few things come to mind:

1) Multiplexing does not increase the bandwidth capability of a channel. You mention various forms of multiplexing, but these will not increase the channel capacity. They are just different ways of utilizing what is available.

2) The Hartley-Shannon Law gives the maximum bandwidth of a channel as

C = B log2(1+(s/n)) bits/second; where B is bandwidth (Hz) and s/n is expressed as a value, not in dB.

Given this, to get 80 megabits of signal in a 100 kilobit channel, you will need a signal/noise ratio of about 2408 dB. Since you were only starting with a 10 watt signal, with about 100 dB path loss (after including the two j-poles), and a terrrestrial noise floor of about -124 dBm for the 100 kHz wide channel, you get only about 60 - 64 dB s/n in your receiver (assuming things like lossless coax, etc.).
Thus you are about 2340 dB short on signal to accomplish the task as described. See http://encyclopedia.laborlawtalk.com/Shannon_limit for more discussion of this.

Your numbers are a bit too far from what can reasonably be believed.

Thanks for doing the math :-)
I thought he claimed a 10 KHz channel ... but might be wrong.

You could cool the receiver and heat the transmitter (1500W,
larger dish) and get perhaps 20 - 40 more db ... that would help :-)

Then you might be only 2300 db short.

```

I was wondering when someone would stumble across the Hartley-Shannon
"law"...

Like most laws of this nature, they break down at the extremes (i.e.

Relativity fails on the scale of the very small and Quantum Mechanics fails on the scale of the very large... For my money, I'm betting on M Theory (formerly String Theory) to be the true GUT).

Plug the numbers in for CAT6 over 100 m running a 10 Gbps data stream. You will find that the equation fails in that it will tell that you can't do that and, if set up right, it will send you the fact that it is impossible OVER the 10 Gbps, 100 m run.

By the same token, if you plug in numbers for, say, 1.2 Kbps over CAT6 of 500 m length, that won't work either. The fact is, we (the telecomm/data comm industry) do it every day.

Keep in mind that we all tend to "think inside the box" and say that things (pick one) are impossible because of some theory or "law". As a general rule, we end up being wrong.

Case in point, everyone knows that the velocity of light (c) is the "Cosmic Speed Limit". Einstein said so and had the math to prove it. Quantum Mechanics and M Theory both have solutions that allow for FTL... And some have some rather unpleasant side effects.

But enough of the arcane math and other arenas...

Try to "think outside of the box"... Think about ways to do:

1) Ultra high speed data over RF media;
2) Make the system so cheap and easy that everyone will want one;
3) Perhaps get the attention of the commercial sector.

Everyone sitting around bemoaning the obstacles that need to be over come are counter productive.

There is no such thing as "I can't do that."

There is only "I won't do that."

At the risk of sounding Republican (which I am) and of sounding like I agree with President Bush (which I do not at least 50% of the time) you need to decide how much, if any, effort, thinking, and support you are willing to give.

If you are interested in digital modes, you will be willing to put in what is needed.

If you are not interested in the digital modes, you should at least get out of the way of those who do.

But, I wax philosophical... And even with 2 doctorate degrees, neither qualifies me to be a philosopher.

Take Care & 73

Some wise old philosopher might have said, if someone tries to sell
you an FTL car, don't bet the farm on it.

Your 100 MBPS in 100 khz scheme works out about the same way.

Shannon's theorem, Hartley-Shannon, etc. just describe what nature does.

Oh, good. Send me that quote.

> There is no such thing as "I can't do that."

Yes, there is.

> There is only "I won't do that."

It is nature that will "not do that".

It is the exact equivalent of those little pills you drop into
the gas tank of your car, and then get 100 MPG from water.

However, there is one difference. I can purchase those pills,
test them, and destroy my engine while getting 10 MPG :-)

I cannot purchase the magic "Shannon violating channel".

As a side note, strings are not yet a GUT, other than on fiddles.

Nonsense. The numbers say nothing of the sort.

My conclusion is: "troll", i.e. nonsense postings to stir up traffic
in the group.

I think that conclusion is being charitable.

Exactly.
Group gets way too little traffic.

Naw, just your usual garden variety troll.
Check the bottom, might win something.

The last time someone made such fantastic claims, they weren't correctly measuring bandwidth.

Perhaps you'd like to share independently-verifiable references to your "mathematical models"?

Dana

I would love to as soon as the university approves the release...

In the meantime, it is all proprietary and property of the university.

Take Care & 73

Which program is doing this research?
I don't find anything on the ACT web site that is even close.

It is joint project between ACT, NPCEO, and NU.

When have you seen a private university system publish their research
projects on a web site?

Take Care & 73

Most of them at least put the projects and p. investigators, etc.
It's called "advertising" ;-)

But what the heck, maybe something totally amazing that will
blow away all current theories of the transfer of information
across a channel will come from ACT.

Won't hold my breath.

"Exceptional claims require exceptional proof."
So far this is an unfounded rumor.

Gotta run, 6M is open again.

You are right that "Exceptional claims require exceptional proof."

You are also right that at this time, due to contracts with the private side investors, the project details can not be made public. After all, when a group of companies take a look at a research project grant proposal and decide to give a consortium of schools several million $ to do the research, they are not doing that because they are the proverbial "Good Corporate Citizens"... They want to make money on the deal. More precisely, they EXPECT to make money on the deal.

I don't think (I hope) that the investors will boil me in oil for saying that Sunday, some of the grad students were working in the Faraday lab and reached a 5 second burst of 125 Mbps over a 30 meter run in the 10 GHz band with a 3 db bandwidth of 145 KHz. This has not been verified or replicated as of yet by another team. Also note that the signal is very, well, messy, with an unfiltered 65 db bandwidth closer to 145 MHz. However, they used a fairly sharp band-pass filter when they measured their throughput... At least according to the report that was sent to me last night.

Again, referring back to the original post in this thread, the thing that I find amazing and, based on private E-Mail I have received from a number of lurkers, is the continuing lack of interest in digital modes that is being perpetuated by narrow lines of thought and an unwillingness to "contribute to the state of the radio art" in communications systems.

There is an old saying among physicists that "If a distinguished but elderly physicist tells you that something is possible, you can safely bet that it is possible... If that same physicist tells you that something in not possible, you can safely bet that it is possible." I am as guilty of that as anyone else... When I first read of string theory, I dismissed the concept less than 100 pages into the thesis. After beating myself up a bit, I went back, read the entire book plus some additional articles and came to the conclusion that it is at least as correct as relativity and quantum mechanics and, actually, fits most observations better than it's older cousins.

In closing, one final quote for you...

"Man often becomes what he believes himself to be. If I keep on saying to myself that I cannot do a certain thing, it is possible that I may end by really becoming incapable of doing it. On the contrary, if I have the belief that I can do it, I shall surely acquire the capacity to do it even if I may not have it at the beginning."

I shall leave it to the intrepid to interpret and/or find the author of the quote.

Imagine my surprise at the 145 MHz bandwidth ...
Is someone confusing bits, bauds and symbols?
You "forgot" to mention the S/N ratio, that is ... um ... "important".

Yeah, right ... "Proof by private communication."

Again, imagine my surprise. Does this communication mechanism
use strings perhaps? Entanglement? FTL propagation?

Another saying that does not apply.

I wish to purchase some of these devices that beat Shannon.

The fact that the "research" is all secret, with no hint given about

how Shannon and Thermodymics are being bypassed, smells of
either "scam" or "incompetence". The "messy signal" comment
sounds more like a combination of both. "Once we clean up the
signal, then we will get the full data rate in only 145 Khz."

There is a long history of such claims, and, like perpetual motion,
eventually the error in the experiment (or the scam) is discovered.

Instead of talking about the science, you attack the person questioning
your outlandish claims, and continue to babble about how much
money will be made once the secret experiments are finished.
It's a classic ...

Why not discuss the science instead?

Perhaps along the lines of "We have discovered a new coding scheme
that provides a high bit rate with a low symbol rate through a narrow
and noisy channel." Then we could discuss how this new and unique
use of Hadamard transforms will revolutionize cell phones. Or not.

This is rather interesting information for use on repeaters that welcome
mixed mode, but using it on what is intended as a voice repeater would
welcome ill will, and perhaps retaliation, or complaints of deliberate
QRM. Where the repeater operators concur, it sounds cool.

Hi Charles..

Some comments on your article.

- Using a voice repeater is in a sense like using a bit regenerative device albeit with no intelligence. The great thing about it is that it avoid the hidden transmitter problem as repeaters are often built in high places. Straight digi's or popular nodes on top of hills get messed up really quickly when one station cant hear another and transmits on top of them. We use to have a system in NSW that was continually getting into packet crash problems because it was badly designed. With one user at each end of the circuit it was great but anymore than that and it was an abject failure.

- I would suggest that the repeater stays on during both sides of the data exchange. This means that you only need to have a large txdelay once and then almost none at all while the exchange is going on. You will of course have to have a CTS squelch that works not on channel quieting but on audio or a partial decode of the start framing sequence
- Long PACLENs will always help provided there is little or no dropout (ie a good strong signal). Large MAXFRAMEs wont really help at all though if you keep the repeater running.
- If you want to keep keying the repeater on and off think about a PACLEN way in excess of what is common. I use to run 768 bytes in kiss mode on a TNC2 box (Using KA9Q NOS) with MAXFRAME 7. At 1200bps I use to get about 120cps with the TX being keyed up for 30-40 seconds at a time.
- Obviously one has to allow for the repeater timeout and restart. I dont know the regulations over there but perhaps you can keep it transmitting data as long as you like. I also wonder what a mess the repeater access tone will make of the data.
- Using a voice repeater is also something that would work well for RDFT/Wyman multicast you have already mentioned. I keep hearing that a faster implementation (wider b/w) is due and since the protocol is being written even now it may be worthwhile figuring a way to use repeaters.
- If you want to use NewPSK it is worthwhile making the Tunelength close to zero. Since you are using FM there is no real frequency error to worry about. I'd also fiddle with increasing the bit rate on an FM channel (2500 works for an SSB one) (I assume that the W32 soundmodem version of Tom Sailor's code has that adjustable. It is on the Linux version)

Tnxs for your article

That sounds like a job for DAMA, which gets you past the dubious idea of having all Packet ops at high power in the forlorn hope that they will all be able to hear each other.

There is danger of a collision while connecting to the DAMA capable node, but none after that as your station will not transmit therafter until the node polls it, giving it an OK to do so. Everybody waits their turn, be they near or far, powerful or QRP.

Since user stations no longer have to hear each other in order to access the network, then low powered stations using yagis can be set up for network access with little or no hidden transmitter - related problems. - You can then attract more users because it's easier and less expensive to participate, not to mention the fact that it will all work much better.

Most TNC's have DAMA capability built-in, and some soundcard Packet stuff has it. The free PC-FlexNet node system offers DAMA access as an option. Switching over to FlexNet with DAMA access would magically cure your Packet network's ills, and improve its performance in other areas at the same time.

As with any change, a few will be inconvenienced and its up to their fellow hams to soften the blow by giving them a hand... Kind of like installing a tone board for a guy with an old VHF rig who can't get on the repeater. The price for improved performance would include some promotion and legwork, visiting hams who need help using DAMA access.

DAMA access is used extensively in Europe, where Packet never really lost its popularity. It's hardly ever been used here in the US...

> - I would suggest that the repeater stays on during both sides of the data
> exchange.

That sounds very interesting! I'll try to find out if I can get it to fly, as that would open up the possibility of speeding things up significantly, as you say. It's sure worth a try.

The receivers which ship with 2.4GHz wireless cameras may be available
separately, but only cover the 2.4-2.5 GHz area. Typically 4 channels. To
be honest. the LCD although looking good isn't really vital since video is
so wideband that you'll soon get to remember which is which, and a small
tuning error isn't the end of the world.
I would suggest investing in a good high gain aerial though (I use a 20dB
gain parabolic (cheapest about 40 UKP for a mesh one, if you don't fell
like making one). You can use those for 802.11b wireless networking, since
this operates in the same band.
David (G7VDI).

Know why didnt I think of that? <grin> I had never ever heard of DAMA but it seems so simple. Of course it would rely on everyone using the same system!

We use to have a ROSE "backbone" all using the one frequency over 3-4 hops. It worked okay if a BBS at one end was forwarding to one at the other end but if any users wanted to jump in the whole lot came to a screaming halt.

I'll have to check if the Linux AX25 implementation has DAMA available.. Cant imagine I'll get back into packet until I move though. Have you by any chance come accross any webpages that cover East Texas? I have seen bits of the Arkansas network and around Austin but not up around Longview/Tyler.

Cheers Bob VK2YQA

I'm pretty sure that XNET offers DAMA access, as it generally emulates FlexNet with the addition of a few additional features. I don't keep up with the XNET news, but I'm sure there is a Linux version of XNET. I've been warned that XNET is buggy - but I haven't taken the time to confirm or deny any of that. In fact, my last experience with XNET was several years ago and what I did back then set it up and verify that it worked. I didn't really give it much of a workout on the air, so I can't tell you much about that. If it does a good job of emulating Flexnet, it should be an outstanding performer.

I know there is some packet activity in East Texas, but none of those guys have a web-site about what they do - at least not that I've been able to find.

I live in the extreme southern tip of Texas, and on "band opening" days when I can bridge the gap up to the Corpus/Sinton area it is then possible to node-hop all the way up the gulf coast into Lousianna and then Arkansas. Part of that routing passes through the area you mentioned, I believe.

  Does it look like the one at:

   http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5744258400
&category=48699

   If so, then its for CB radio and won't work for VHF.

Hi Larry,

You might have ended up in ROM BASIC mode,
which means that there was no operating system found when
You booted up the computer. Try putting the DOS floppy
disk (360kB) to the floppy drive A: and boot again.

Greetings from Pissa, Italy
Gianpiero

Yes, (X)NET offers DAMA. We used it years ago on a dual-speed 1200/9600 user access port to prevent collisions because TNCs cannot detect transmissions not using their own speed. Of course there's a certain protocol overhead but DAMA performed fine. We abandoned it after the majority of users migrated to 9600. We ran (X)NET Linux in our PBBS for many years. Extremely robust, sysop maintenance work was virtually zero. Still running (X)NET DOS in our local digipeater. BTW, there's an (X)NET forum accessible via http://www.swiss-artg.ch/xnet/index.html although it seems to be down currently.

Tnxs Charles

So if you see any packets from me in a few months dont get excited...
I'll probably be using my VK callsign for a few years when I move
(Pretty sure the FCC says thats okay)

Cheers Bob VK2YQA

Does anyone know of a reseller who still cariies the MFJ 1270C in stock? They are backordered 2-4 weeks from MFJ. All of the usual suspects (AES, HRO) don't have any in stock. The AES guy said he thought they may have been discontinued.

Thanks,
Jeff

Jeff,
Is that the TNC that was made for Commodore computers? I think the "C" indicates it was. I bought one from MFJ but it was a long process. First they indicated they no longer made them. Then I got in touch with the actual MFJ warehouse and found they had hundreds of them stored in the warehouse. Finally going back to the sales guys I informed them of this and they finally did send me one which I am still useing today. Works like a charm never has failed with my C128 computer driving it.

I emailed them asking what dealers would have them in stock and they told me to call their 800 number to get a list of dealers from them and I could track one down for myself. Although I've had pretty good luck with their products, I'm not too happy with their service. Looks like I should be looking at Kantronics products instead. I'm currently working on a new bbs system and would like to find a tnc-2 clone for testing.

73,

Jeff

Yes I just checked my manual after I found it by searching all day.
its the 1271 (that was for Commodore users).

The Kantronics TNCs aren't really TNC-2 clones. Much of the command
set is compatible, however. As Howard said, the MFJ-1270C is as close
as you can get (in a new unit). The Paccomm Tiny-2 is probably next.
You should be able to find a 1270B (a bit closer to the TNC-2 than the
1270C) fairly cheap at a hamfest or on E-Bay.

Bob, N7XY

Proprietary gear like Kantronics and Timewave will get you into trouble as a BBS operator, as it puts severe limits on the types of software you can use. The stuff you are using now might be able to work with them, but what about new stuff, down the line? - A good example of this would be PC FlexNet, the most advanced VHF/UHF networking system available. The FlexNet folks cannot create drivers for proprietary gear (Those outfits will not share the proprietary code the FlexNet people would need to work with.) so for FlexNet, the TNC clone does what no Kantronics or Timewave gear can do.

PC FlexNet is just one example out of many where it pays networkers to avoid proprietary gear, as a general policy. - You don't want to get stuck running obsolete software, or have one or two packages to choose from, as opposed to twenty or thirty.

You can get by with propriety gear - but why just "get by" when you can be ready for just about anything?

Nonesense.
It will work just fine.

> The stuff you are using now might be able to work with them, but what about new stuff, down the line? - A good example of this would be PC FlexNet, the most advanced VHF/UHF networking system available. The FlexNet folks cannot create drivers for proprietary gear (Those outfits will not share the proprietary code the FlexNet people would need to work with.) so for FlexNet, the TNC clone does what no Kantronics or Timewave gear can do.

More nonesense. If Flexnet cannot interoperate with the existing network it will fail. Oh, wait, it already did!

> PC FlexNet is just one example out of many where it pays networkers to avoid proprietary gear, as a general policy. - You don't want to get stuck running obsolete software, or have one or two packages to choose from, as opposed to twenty or thirty.

And the other examplese are?

> You can get by with propriety gear - but why just "get by" when you can be ready for just about anything?

With a 1270C ???

Have you heard about this new hunting reality TV show that's seeking participants? It's called "Hunting for Bambi" and it's like Fear Factor meets Girls Gone Wild. 6 guys get to hunt 12 naked women in the woods with paintball guns. Sounds like it should be a new Olympic sport if you ask me! Definitely better than hunting deer. lol! Go to www.huntingforbambi.com if you're interested in signing up.

Thanks for the advice, but I'm just looking for something that will do kiss, so the device doesn't need lots of smarts. The only thing that was keeping me away from Kantronics for this install was the price. I didn't want to lay out $200-300 on a nice tnc and then not use any of its features besides kiss mode.

Will FlexNet run on XP or linux or is it just limited to obsolete versions of Windows and DOS 3.1 or later? If it won't run on a newer operating system maybe that's the reason you never see it anywhere. As you said, I don't want to get stuck running obsolete software.

Hi Jeff

I guess we could argue that if you really want something "KISSee" you might want to go with a soundcard device. Flexnet I think talks to TNC's but using a soundcard is done by using Tom Sailors "soundmodem" whether it be for Windoze 32 or Linux.

Last time I looked, Flexnet ran on both XP and 2K. It came out around the time W95 was around so I dont *think* it runs under DOS/W3x (but I am prepared to be shot down on this!) My use has mainly been Linux though running TCP/IP stuff over the soundmodem stack. (With its multiple modes - AFSK, FSK, NEWPSK etc)

And sound cards are much cheaper than TNC's... and you can use them for all manner of 'special' modes.

This is a Flexnet site - http://www.eed.usv.ro/misc/mirrors/flexnet/. If you have a problem downloading get back to me. The package is not quite

GPL in that it is restricted to amateur radio use...

I am sure you have already heard this argument so I apologise for blabbing on!

Cheers Bob VK2YQA

(replace bcnntp with bcnuup if you wish to direct email)

RGR, you have pointed out another good reason to give the proprietary gear a pass.

By the way, A good, inexpensive KISS TNC can be found at:
http://www.coastalchipworks.com/PICTNC.htm

For 45 bucks it's hard to go wrong, and the units have a good reputation.

At home you can use versions for DOS, Win95, and the Flex32 version which is good for all Windows versions since Win95. This includes 98, 98SE, XP, 2000, ME etc. etc... I use Flex32 (http://www.uspacket.org/flex32/flx_32.htm) with the excellent terminal program Paxon (http://www.uspacket.org/paxon/paxon.htm) ...

Flex32's soundmodem driver, written by Thomas Sailor HB9JNX is especially nice, as 1.2kb afsk is but one of many options this driver gives you to choose from. You can also operate afsk, fsk, Q15x25 mode, and packet at 1.2kb, 2.4kb, 4.8kb and of course 9.6kb. There is more, but my point has been made and I'm too lazy to bring up the soundmodem driver onscreen to see what the other options are. If you are interested, you will find out for yourself and I wouldn't want to spoil that for you.

The two links above are to setup tutorials, step by step with screen shots all the way.

The node option is only available for the DOS version. I suppose they figured that very few hams would want to tie up a Windows computer in order to operate a node, and who would see the GUI interface anyway, eh?

FlexNet is (from a technical standpoint) around a decade or so ahead of any other available package. This includes the two FlexNet knock-offs, XNET and AGW which have managed to mimic some but not all of FlexNets advanced features.

So (strictly speaking) if you are already using something else besides FlexNet, then you are already using obsolete software.

There's nothing wrong with the older stuff, it works just fine. - But FlexNet will work noticeably better so if performance is a big deal with you, that's your best way to go.

Having said that, I will mention that the last shred of performance is not always your best choice. If the packet net in your area is all X1J for example, then there is a lot to be said for fitting in well and becoming a seamless part of the network by using X1J as well.

As always, these decisions are best made by the ham on the spot. It's hard to tell you what's best for your situation from here at the southern tip of Texas.

As for FlexNet "never being seen anywhere", well gee... It covers all of Europe and a big chunk of the northeastern USA.

Hello,

If you need a real good modern TNC that runs with no problem under WinXP take a look at IfD's homepage:

http://www.ifd-online.de/

The TNC7-Multi (USB/RS232) as the TNC2-Multi (RS232 only) supports HOST (TF2.7), 6Pack (PC/Flexnet/Flex32) and KISS, and is out-of-the-box ready for 1k2 and 9k6 packet, 19k2 after filter mods.

Charles --

Thanks for the pointers to FlexNet and the PICTNC. I started looking over your tutorial and I think I'll give it a try. I've been working on getting soundmodem set up up a RedHat 9 system (unsuccessfully) and am in the process of upgrading the system to Fedora Core 3. Getting soundmodem to work on that system (along with FBB) was going to be tonight's project, but I think I'll take a little detour and check out Flex32.

Sorry about the comment on never seeing FlexNet anywhere. After doing a

little research this morning I realized that wasn't an accurate statement.
Put things in perspective, though. I live in Nebraska and you don't see too
much of any kind of packet out here. The FlexNet web sites I had visited
before were a little stale and didn't have any references to Flex32, so my
assumption was that it didn't exist yet.

Thanks again and 73,
Jeff
N0WJP
